|Many thanks for all the comments. I am curious. What about the W2IHY
|Technologies 8-Band Audio Equalizer and Noise Gate that is advertised in
|QST. Will it achieve similar results as a good speech processor?

The short answer is NO.

But you can have endless fun on the air talking to others that are using them, particularly the guys that have bypassed the audio stages in the rig and are driving the balanced modulator directly.

"Okay, I've boosted 50 Hz by 1 dB and cut 400 Hz by 2 dB. How do I sound now."

"Just a minute, I recorded you... let me play it back."

"Hmmm. Well, I dunno... let me boost 50 Hz by another dB. How does that sound?"

"Oh, much better. Now try boosting 4 KHz just a bit...."

And the cell phone company thought they were original with, "Can you hear me now?"

You can also enjoy annoying the others trying to operate in close proximity, especially with the opposite sideband burble you're now transmitting as you attempt to extend your frequency response to 0 Hz.

>Anyone have any comments on this 2m hand held. Thinking of getting one.
>
I have been happy with mine, and a couple of others in the local club
are happy with theirs as well.

Rugged, and very easy on the batteries when monitoring.

Deals better than most with RF interference.

When in a pouch, the top mount display is very helpful by being
visible.

Lose the original antenna and upgrade. I use a flex 1/4 wave and get
very good coverage.

With 207 memories, you will want the programming software.

I wish they made a dual band one.
Happy trails,
Gary (net.yogi.bear)

It seems strange that you would really notice a problem with the audio
on the 570. Myself, I've never noticed any problems on the ones I've
heard, and they seem to sound about the same as most other kenwoods.
It's possible the alignment may be off a tad. But if this is the case
usually the radio will appear lopsided as you switch from usb to lsb.
One will be tinny, and the other real flat and bassy. I think you said
you adjusted the DSP? and any carrier balance controls. It's usually
the carrier balance that would cause that problem in a radio that is
not adjustable. You sure it's not the mike? I'm not really familiar
with that particular EV mike, but most EV's I've run across didn't
have that much bass response. I'm sure they vary though.. Have you
tried it with no EQ? There really shouldn't be much need for EQ if you
have a good mike and a good impedance match. If it were me, I'd try a
good dynamic mike with no EQ and see what happens. I've never really
seen a kenwood that didn't sound good with nothing more than a good
dynamic mike. So if your's doesn't, I'd be wondering what the heck...
I use no EQ or audio rack at all here. Just a good audio technica
dynamic mike.
You don't want too much bass. It's a power waster if you run mostly
dx. But I know what you mean, I don't like them tinny sounding either.
I tape my back ports up on mine so I don't have too much bass. I'm
not running a 570 here so can only go by what I hear on this end. I
thought they were a pretty good sounding radio unless I was missing
something. I hear quite a few of them. MK

Licensed in 1974 I bought a Heathkit HR10 receiver from my high school electronics teacher and a Johnson Adventurer and VFO from the ham that gave me my novice test. A few months later I found a Hallicrafters SX140 Rx, HT40 Tx and HA5 VFO in the local paper. That was a much better rig. I had a lot of fun with that. Wish I still had it.

But I guess that is not store bought. Come to think of it, I still haven't bought a rig from a store.

8. FS: Drake R-4, T-4X, MS-4, Frequency Synthesizer

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-01 05:46:04 UTC
From: "Robert S. Stein" <w6nbi@earthlink.net>
Message-ID: <3CF85F9C.5030706@earthlink.net>
Source record: 42819

Drake R-4 Receiver, T-4X Transmitter, MS-4 Power Supply/Speaker with original manuals. The R-4 comes with several extra crystals, which are really not needed if used with the the frequency synthesizer. $450.00.

Frequency synthesizer for the above, which I designed, built and published in the August 1972 issue of "ham radio" magazine. I will supply an original issue of the magazine (cover slightly torn), as well as schematics of all the circuits which improved performance but were never published. This synthesizer provides complete coverage from 500 kHz to 30 MHz, thus including the WARC bands. $275.00.

If necessary, I will sell the synthesizer separately, but if a buyer takes all, I will reduce the total price to $700.00.

Buyer pays shipping. However, I prefer a pickup in the San Francisco Bay Area or will arrange to meet at a reasonable location.

Bob, W6NBI

The foam wind covers are often used to reduce wind noise at the mike,
for a separate boom type mike. Maybe you can get a small piece of soft
foam and experiment.

Just FYI, I use the RAM Mounting System's mount for my HTs when
cycling...

A couple photos appear here:

http://groups.yahoo.com/group/BMHA/files/K6LCS/

I have improved the overall setup since I posted those photos, though.
I am using a motorcycle PTT from Pryme (their motorcycle series,
SPM-800) along with a mini-boom headset (Pryme's SPM-4xxA Series).
Works very well.

> believe they've reopened the business.

Yeah - but it's a bitch to do the mod right. You have to
change the 77's input to a Mic connector, then fashion a cable
for the output to connect to the rig. And you have to
mod the keying circuit to operate from the mic switch.
I must've done mine wrong. When I finished the mod, I
connected the new output cable from the Alpha to the mic
input on the 746. I fired up the Alpha and waited
a while - someone told me you're supposed to wait a few
minutes - then I keyed the mic. It blew the 746 right
off the operating desk - pieces of melted plastic
are still embedded in the sheet rock, according to
my wife. The carpenters have finished replacing the
section of wall that was destroyed, but they claim
they can patch the damaged sheetrock on the rest of
it. I'll be going back to the shack to figure out
what went wrong, as soon as I get these casts off and
the doctor gives me permission to walk up the stairs.
I'm sure the smoke odor will be gone by then.
We never did figure out whether the force of the
explosion blew me out of the chair and down the steps,
or whether I stumbled in the smoke and fell. The last
thing I remember is thinking how powerful my audio
was going to be.

21. Re: Lojack vehicle recovery system and amateur mobile operation

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-02 00:55:45 UTC
From: Joe Leikhim <jleikhim@nettally.com>
Message-ID: <3CF96D11.C98D591E@nettally.com>
Source record: 42832

The LOJACK uses a pretty secure addressing scheme so falsing should not be a problem. Overloading should not be a problem as long as you don't install the mobile transmitter antenna too close to the LOJACK antenna. The problem I see is that LOJACK doesn't reveal where they install the unit in the vehicle so you will need to find it before you settle on an antenna installation. I suspect they install the antenna inside the windshield or rear window pillars. If so, you would not want to install a glass mount antenna nearby. A roof mounted NMO antenna mount (properly grounded to roof) should avoid any problems.

hey dale
chances are thats an old CB amp they sold them as an HF amp back in the day but no one but CBers bought them the drive input is low only around 12 watts pep
take the cover off it to see if there is a differnt manufactuers name to search by
may also want to post on the CBer newsgroups see if you can find any info there
good luck

28. Icom 2800H W/ HM 98S Mic

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-02 13:44:47 UTC
From: Lloyd Kubis <kubisl@iprimus.com.net>
Message-ID: <3cfa210a$1_1@news.iprimus.com.au>
Source record: 42839

I have just received delivery of a brand new ICOM 2800H and it's TX audio is just terrible, being fuzzy and heavily distorted. I noticed that the package came with a HM 98S mic instead of the one indicated in the manual which is a HM98. Does anyone know the difference between these two mic's? One difference seems to be that the keyboards are slightly different.
The HM 98S mic seems to be overly sensitive and is overloading the TX audio stages. The DTMF tones though seem to be clean and of proper deviation level.
Was the wrong mic supplied by the factory??
Can any one help me clear up this problem??

Thanks for your help!!

I bought one at Dayton and have been very happy with it. I am a carpenter
and usually carry it at work so it gets banged around alot and seems to not
affect it.I love mine alot.Like Gary said I wish they made a dual bander.

The amp is a 100 watt CB amp. It will work with low power input (3 to 8 watts)
from 26 to 28 Mhz. Most likely uses MRF 454 or similar transistors for the power
amp section.

Will not work on 20 meters without modification of the tuned circuits.

Let me also add, I have one and love it! I will tell you the best
thing you can do is to buy the AA battery holder and fill it with
rechargeable NiMH batteries. The stock NiCd pack lasts about
8 hours of normal use. The AA battery pack with Ray-O-Vac
NiMH batteries from Wal-Mart lasts 30+ hours and are
recharged outside of the radio, (I use a charger from Rat Shack),
instead of tying up the radio for 12+ hours as a 'charger' unit.

If it is such an amp, it likely does not have the filtering (RF)
to meet amateur requirements.

Source record: 42844

Hi All,

As I said in a previous post, my Alpha 78's face & case have become quite sticky. A new face is available from Alpha-Power, but not the case. The original finish on the case felt like velvet. I'm sure that the original finish cannot be duplicated, but does anyone know of a close color match for the case ??? It's not the gray like the 76 series amps, but a medium shade of tan.

Thanks,
****

Now that I have completed my collection of HR magazines I am selling off the spares that I have. I still need some HR binders (both sizes).

The magazines are in good to very good shape. Send me your list and I'll let you know what I can fill. Prices are $2/ea for the small format and $1/ea for the larger format. Prices do not include shipping.

If you need a total, give me your zip code and I'll check postal book rate shipment from 72227 to you.

Source record: 42749

All the HS-98 series mics are compatible with the 2800h and the 2100h, the audio problem might be that either you are talking to close to the mic, or you are "yelling" into the mic. this tends to cause the "splatter" effect when you over-modulate the audio causing splatter. which can cause some repeaters to not work at all. this happens sometimes on our repeater here in NY. Good luck and let me know if it clears up. Because I plan on buying a 2800h in the near future too!

40. Manuals for Radios and test equipment for sale

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-02 20:34:09 UTC
From: Rochelle Hess <rhess3@mindspring.com>
Message-ID: <3CFA8141.A2F24DD1@mindspring.com>
Source record: 42751

Hi,

My wife (KB7UJC) and I (KB7UKR) just completed a major purchase and catalog effort of radio and test equipment manuals. If you are looking for a manual for a piece of equipment, you might want to come to our web site and look for it. We have them sorted by manufacturer (Motoroal, GE, Johnson, etc.). You can click on a manufacturer and search for a model name or manual part number using the search feature of your browser.

We charge actual shipping costs via USPS book rate (unless you want to pay more for some other method). Prices for manuals range from $1 to $30, depending on size (physical weight), condition, quantity we have on hand, and so forth. If find a manual you want, just drop us an e-mail and ask us the price (EXAMPLE: How much would GE 14 be, including postage?). We'll get back to you in a day. Oh, and prices go down when you order multiple items (we want our garage space back).

These are not copies, and when the original manual is sold, that's it, we're out.

So come take a look at

http://rhess3.home.mindspring.com

We're doing this as a service to the ham and test equipment communities, and not as an ongoing business. We take personal checks, Money Orders, and PayPal.

My best to you,

-Kevin C. Hess (KB7UKR)

There is a complete service manual for the UV-3 (I think I have a
copy) which is a blue notebook (just like the TR-7 Service Manual).
They quite often appear on Ebay, Be aware though, servicing the
spaghetti wiring of a UV-3 is not for the faint of heart!!!

Hi Fellas;
I have for SALE:
1- Heathkit HW-101 Transceiver, No filter options, has SO-239 output connector mod, Meter, Vox, Calibrator, Audio all work. Dial is Right on & nice & tight.
RF output is as:
80 meter= 1 watt & 100 watts, intermitant.
40= Nothing, no receive either.
20= 100 watts
15= 100watts
10= from 30 to 50 watts out depending on which segment.
Receives nice on both LSB & USB except 40 meter(?).
Rubber belt seem NEW.
Does full RF output when the Mike is keyed but you can see that there is audio on voice peaks.
The radio is in real nice shape with usual chips on the cabinet but I think it mainly needs alignment but I am not a tech.
Oh, I had to borrow a supply to test it & it does'nt come with one.
Price is $125 + UPS from 11758.
See pics>>

54. Antenna Solution: 130-170Mhz & 400-479Mhz

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-03 08:57:09 UTC
From: Steven Haigh <netwiz@optushome.com.au>
Message-ID: <3cfb2f64$0$31826$afc38c87@news.optusnet.com.au>
Source record: 42765
Cross-posted to: alt.ham-radio.vhf-uhf,aus.radio.amateur.misc,free.uk.amateur-radio,rec.radio.amateur.equipment

I'm looking for a solution that will hopefully give me a lowish SWR on 130-170Mhz TX, and 400-479Mhz TX.

I got a Yaseu AD-3 Duplexer, but that completely filters out 465+ on it's UHF output, much to my disappointment.... I have a feeling it will also do the same on the VHF frequencies above 150Mhz....

I have 1 dual band radio, hooked up to two antennas.

I would also like to keep the 800 - 900Mhz recieve, and the 300 - 399 Mhz recieve in tact, which I believe is something that the AD-3 duplexer would have stripped me of....

I was thinking a coax switch would be an idea, but having only found one for HF (14 - 50Mhz), I'm pretty sure that wouldn't help me...

I've run out of ideas... Anyone here have any more insight on possible solutions?

If you are just chasing a cheap VHF/UHF splitter/diplexer with a
crossover frequency ~200-250 MHz, try Hills DPX-U/V. Cheap but works
as long as your power is 25W or less. Ignore the nominal 75ohm
impedance, we have used them on 50ohm stuff for yonks and they present
a fairly good match in both bands.

Sorry - forgot to mention, it's a 50W output on 130 - 170, and 35W on
400-479.....

Not sure if changing the antenna would be considered an acceptable solution
for you, but here goes:

You didn't mention if it is base or mobile, but certainly a discone antenna
(base) would satisfy your dual-band transmit and wide receive requirements.
The Diamond D-130J (US$90) or the Radio Shack 20-043 (US$60, if available to
you) are two possibilities.

Why not use a single dual band antenna? I use a MaxRad. There are several other makes and models that will do the trick.

You should be able to lower the deviation inside. Theres a trimmer in there
for that. I had a IC-207 with the same problem. Very hot distorted audio.

To All,

I enjoy mine thoroughly also! Would recommend it to anyone. As someone
else suggested, it would be great if Yaesu/Vertex made dual band version.

I have a couple questions for the group however,

1) Does the ARTS beep inteval work when set to ALWAYS? - mine doesn't?
2) The TX Save feature does not seem to work as it does with my VX-5R?

Has anyone tested these features out yet?

Thanks - Jon

64. Increase low power on Icom IC-290A?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-03 14:47:02 UTC
From: vhfradiobuff@aol.comspamsux
Message-ID: <20020603104702.26636.00002145@mb-mk.aol.com>
Source record: 42775

Does anyone know if it's possible to increase the low power setting on an Icom IC-290A from 1w to 3w? I'd like to do this to drive an amp. This would be better than lowering the high power setting from 10w to 3w. If I do that, without the amp, I'd only be doing 3 watts, as opposed to 10w...

> pretty hard to make sales that way in my opinion.

The Price list I just downloaded is dated June 2002, since this is only the 3rd I don't think its too out-of-date.

I can see why the reluctance to list a price that may be meaningless with all the manufacturers specials and discounts and updated models coming out on a regular basis. Todays best price on the Mark7XQ32/A can drop like a stone when the Mark7XQ32/B suddently appears.

I purchased a new transceiver from Elkel last month and they sold it to me for significantly less than their current price list. They did not have the lowest price advertised on the net or in magazines, but they offered the lowest price when I placed my order because the price had just dropped; so you can't count on shopping advertised prices any more.

Dave

Steven, What radio are you using?
I'm interested in buying a dual band radio that is able to transmit outside the usual boundries.
Presently I'm using a Yaesu FT-530 and I'm lucky if I can get 300 mW on uhf cb.

Cheers
Jay

Anyone out there own and care to comment on the new DSP filters in some of the new Icoms and Kenwoods? How well do they stack up against the old crystal filters?

Particularly interested in the Icom 746 and 756 Pro II since they seem to be the first out there with 24 bit A/D converters. Ten Tec's new 565 is supposed to have them as well.

Jim

I have for sale a Ten Tec Argosy II Model 525D in very good condition with original manual and Ten Tec hand microphone. I would rate it a 8 out of 10 and there is some light scratches on the case and power supply nothing major for its age. The power supply is the matching Ten Tec 225 with original manual. This rig has a digital readout and covers 10 to 80 meters and high output power is between 40 to 50 watts and low is between 4 to 5 watts. Here are some of the options that it has, hard to find 223A noise blanker,219 cw filter 250Hz and the audio cw filter 224. This rig is in fine working condition and a high serial number 25xx.....Will take $375 plus shipping in the 48 states only. I can be reached at 508-821-2993 or email.....WZ1U Steve

Source record: 42728

Hi
I need expert opinions to help my final decision to buy a radio scanner.
I have no experience but i like purchase a scanner for hobby. I have read a lot of Webs and documentation, and i am very confused.
In that moment i like the Model Yaseu VR 500, especifiction page
http://www.yaesu.co.uk/amateur/receivers/vr500/vr500.htm
My interesting is the aircraft comunications (air and ground) because i love aircrafts. My confusion is about the 8.33Khz Airband tuning steps.
Alinco DX J3 (my first choice) have this step but is a basic model without (SSB,USB/LSB,CW) and no alfatags.
The model Yaesu VR 500 come with this steps(0.05/0.1/5/6.25/9/10/12.5/15/20/25/30/50/100 kHz), but no 8.33Khz step.
Questions:
Is possible tuning the new step frequencie with this model?
The choice model is a good scanner purchase to the new step 8.33Khz Airband?
Anyone have this model and have good results in this frequencie?
Other model is best for the job?

Please i need help and this group have my solution certanly.
Excuse my English
Paulo Coelho

Source record: 42794

24 bit A/DO converters have been around since the Kenwood TS870S, which was the first all DSP rig. You'll probably want to look at 32 bit DSP processing as the state of the art.

The consensus of those who demand the most from their receivers is seems to be that all-DSP rigs are not quite ready for prime time. While a good DSP rig can have good dynamic range/blocking dynamic range/2nd and 3rd order intercepts, close in BDR and DR leave something to be desired when compared to rigs with cascaded filters.

The 746 Pro and 756 Pro II are nice rigs, but they don't hold up RX-wise with the FT1000MP/Mark V/IC775/TS950SDX class rigs just yet. The Ten Tec Orion's ham band RX will be a combination DSP/cascaded filter rig, not DSP only. Spec-wise, it looks terrific- unfortunately, Ten Tec has a history of aiming for the sky with their newer rigs and falling just short in performance and reliability when compared to the "elite" Japanese rigs, like the FT1000/TS950SDX class rigs.

That said, the all DSP rigs can give you plenty of bang for the buck. I've got a TS2000, which works just fine for DXing, although it wouldn't be my first choice in a multi-multi contest environment.

Hope this helps and 73,
Scott, N9AI

Hello,

These valves are completely new, never used. They are in original
boxes and in mint shape. The valves are mostly HALTRON brand, but
they were a typical 'rebranding' company and got their valves from
well known manufacturers like Philips, Mullard, Siemens etc.

The following are for sale. The price shown are for each valve, and
as you can see, they are very low.

950 pcs DY 87 $ 0,40 HV single rectifier

60 pcs EB 91 $ 0,50 = 6AL5
40 pcs EF 50 $ 0,40 WW2 wideband pentode
20 pcs EF 55 $ 0,50 WW2 wideband radar pentode
200 pcs EF 183 $ 0,50 = 6EH7 remote cutoff pebtode
40 pcs EY 81 $ 0,40 Booster diode 550V 150mA
40 pcs EY 86 $ 0,40 HV single rectifier

220 pcs PABC 80 $ 0,50 triple diode + medium u triode
400 pcs PC 900 $ 3,00 high gm VHF triode + audio
90 pcs PCC 85 $ 0.40 double triode VHF
280 pcs PCF 200 $ 0,50 triode + high gm pentode
350 pcs PCF 201 $ 0,50 Triode + high gm pentode
630 pcs PCF 801 $ 0,50 Triode + high gm pentode
370 pcs PCF 802 $ 0,60 Triodepentode
730 pcs PCH 200 $ 0,50 Triodeheptode

150 pcs PCL 81 $ 0,60 Triode outputpentode
190 pcs PCL 82 $ 0,50 Triode outputpentode Wa 7W
200 pcs PCL 86 $ 0,60 Triode outputpentode Wa 9W
250 pcs PFL 200 $ 0,50 Pentode + high gm outputpentode
(S= 22mA/V Wa 5W)

100 pcs PL 36 $ 0,50 Line outputpentode Wa 12W
170 pcs PL 82 $ 0,50 Output pentode Wa 9W
170 pcs PL 83 $ 0,50 Output pentode Wa 9W
360 pcs PL 84 $ 0,50 Output pentode close to EL 84 l
200 pcs PY 81 $ 0,40 Booster diode 550V 150mA
100 pcs PY 83 $ 0,40 Booster diode 175mA

Even more discount is available if you buy large quantities.

Please contact me by fax (+47 57 69 12 67) or e-mail (arnoldg@c2i.net)

I don't believe anyone makes them anymore. I own an Icom IC-290A 2m multi-mode (lacks AM mode). It's a very nice rig. Go to eham.net and check out reviews for it. I got mine on a very good deal for less than $150.

Racal RA-17C-12 Communications Receiver for sale. This is the North American Version with American Tubes, S-Meter, More Audio Output, Coaxial Connectors, etc. It is all original. It is in very nice shape with top cover, copy of manual, and Racal Brochures. Stability is super with the Wadley Loop. See on page 329 of Osterman. It is listed as "scarce". This is one of the best receivers I have ever used. This one is in very nice shape and works exceptionally well. I need some room, so it is up for sale.
Price is $550 picked up in Abilene, Texas, or I can deliver it, upon request,
to HamCom in Arlington,Texas this weekend. Digital Pictures are available upon
request. This is a very nice receiver and priced below Osterman's suggested price.
Thanks, Charlie Hugg, K5MBX
Abilene, Texas

Andreas -

Congratulations on your first rig.

The power requirements of the FT7100M are 11.5A TX on VHF, 10A on UHF both high power.

This information can be found on the manufacturer's web site at http://www.yaesu.com/amateur/ft7100mtx.html

I use a power supply with at least a 25% overrating. Generally, we tend to hook up more than one device to the power supply, so the bigger, the better. In my case, an Astron RS35 powers an HF rig and a dual-bander, plus a TNC and a 2M hand held. No sweat but then again, I don't simultaneously TX on all rigs at once!

Also have had really good luck with the little MFJ-4125 switching power supply. This little guy weighs very little, is about the size of a CD-ROM drive, and puts out up to 23A. For $100 just about anywhere.

Good luck and 73

Mike N5MJ

I bumped into a useful feature of the FT-50RD. If you hold the knob down until the menu comes into the window, and then turn the knob to #4 ("SUB") one of the options is "dc", which will show your current (pun intended) battery voltage as a replacement for the preset channel number. That would have shown you that your power was adequate, so something else must be the problem.

73's,
Steve

107. Operating question on Yaesu FT-50RD

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-04 21:46:00 UTC
From: Stephen Hill <nugrange@telocity.com>
Message-ID: <3CFD3514.9A9C7B9E@telocity.com>
Source record: 42717

I have tried to implement the ability to only scan in certain freq ranges in the FT-50RT, without success.

I have three specific "bands" that I'm interested in; public safety, aviation and amateur radio. The way I interpret the manual, I should be able to set a lower and upper range in the u/l memories, then key in one of those freqs and then (long) press the MR/skip button, without success. It will continue to scan all stations in my scanning memory, regardless of freq.

For instance, I have 145.000 in my L1 memory, 148.000 in my U1, then go to the first station in my scanning memory (145.23) and do a long press of the MR/skip button, which looks at ALL my memorized stations. I have also gone to the L1 preset, and then pressed the MR/skip, still without doing what I expect it to do.

Am I misunderstanding the instructions?

Thanks,
Steve

Thanks for the comments Scott. I had the chance to listen to a TS 570DG recently and was impressed by its performance and price.

Regarding dynamic range figures, I agree it is difficult to find numbers that mean anything. Everyone lists the 20 Khz DR. Rarely do you see a number at 5Khz. You usually have to rely on amateur operators to measure and post it.

Yes, you are misunderstanding the instructions. The scan limits (L1-U1 for
example) are for scanning the VFO, not memories.

Hi have a nice radio shack pro 90 300 channel trunk tracker scanner forsale.
This is a hand-held scanner in good condition.
Comes with ac/charger rubber duck and battery pack.
The battery pack i think needs a new one it holds a charge for about half
and hour.
Scanner works great.
You can download the manual for radio shack website.
$125 shipped lower 48 states ups insured.
Please e-mail me direct or for pics of scanner.

Exactly, you will scan 144 to 148 in the scenary you presented.
If you wish to scan your memory channels, yet block some out, hit function
and mr(skip) and it will block those channels from the scan list.

Message-ID: <3cfd7270.340574580@news-server.nc.rr.com>
Source record: 42723

I have recently upgraded my laptop and have a very nice Dell Latitude CPx . This laptop has a P-III 500MHz CPU, 192MB of RAM, an 11.2GB harddrive, CDRom, Floppy with external connector cable (so you can run both CDROM and Floppy at the same time), Ethernet PCMCIA Card, 56Kb PCMCIA Modem card, 13.5" Color TFT Active Matrix Display, Dell Laptop case and two high capacity batteries (both of which are brand new). It comes with Microsoft Windows 2000 Professional w/SP2 installed, but an original Dell Win2KPro w/SP1 CD. Includes a Dell Laptop carry bag (canvas).

Will sell for $800.00US plus $15.00US shipping or trade even for a JRC NRD-535D HF receiver in good cosmetic and working condition. Must have a serial number above 56000 and the original 535D features installed.

Please reply via email address below.

73s,

Chuck
wampus@nc.rr.com

Date: 2002-06-05 03:10:26 UTC
From: Dan Long <w4tq@mindspring.com>
Message-ID: <adjvjfare1@slb2.atl.mindspring.net>
Source record: 42731

SWR Meter & Signal Strength Meter - Philmore - Ebay

This is a very nice meter, used for measuring SWR or for field strength, Model FS-45. It is designed for HF operation, up to 1000 watts.

For those who aren't familiar, this meter checks antenna operation by measuring the ratio of reflected power to forward power. If the ratio is high, it indicates that the antenna is not correctly matched to the feedline or to the transmitter. The meter will also show a high ratio if there is a bad connection.

Cosmetically, the meter is in very good condition, and has a minor flaw on the front panel in the area of the "REF" printing (see picture). The meter is very clean. It includes the box, field strength antenna, and instructions.

For auction on Ebay, click on:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1356991949&ssPageName=ADME:B:LC:US:1

Why don't folks go to the mods database that's posted here every week?

http://www.mods.dk

121. Grain of wheat bulbs..

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-05 03:36:01 UTC
From: Max <ve3tmt@rac.ca>
Message-ID: <IGfL8.5319$W74.1265707@news20.bellglobal.com>
Source record: 42732

Need help identifying the bulbs in my Alinco DR110 2m radio. A few need replacing. Saw a post a while ago here identifying the bulb. can anyone help?

122. Mic Element? Help!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-05 03:43:45 UTC
From: Screaming Skull <KG4IVT@hot.mael.spicedmeat.sucks.leave.me.alone.com>
Message-ID: <RNfL8.64680$6v2.2624322@twister.southeast.rr.com>
Source record: 42733

I've got a Yaesu YM-47 (for a FT-290r) mic that has a bad element in it. Without ordering anything, is there anything that I could possibly pick up at Radio Shack to replace this thing? Using an electret element is fine just how do I wire it? I've tried those before with terrible results that were most likely due to my not knowing much about using those type of elements. Any suggestions are welcome as I need to get this done fairly quickly. Thanks!

123. 2m horiz. polarized antenna options?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-05 03:46:20 UTC
From: Screaming Skull <KG4IVT@hot.mael.spicedmeat.sucks.leave.me.alone.com>
Message-ID: <gQfL8.64687$6v2.2624460@twister.southeast.rr.com>
Source record: 42734

I freed up a my 2m all mode rig a few weeks ago with the purchase of an IC-746. I would like to use my old 2m rig for VHF contesting/rover type work. Does anyone have decent plans for some sort of MOBILE VHF horizontal antenna? I've got a couple of old mag mounts around here that I could use to attach the thing to my car. I am not going permanent with a rover setup yet. Any ideas? Thanks!

124. FS GOODIES Galore.....

Hello I got MUCH, MUCH, MUCH more stuff 4 Sale.....

Yaesu Landliner LL-301 phone patch......$29.00

AEA PK-88 TNC with manual $40.00

Swan 350 with Electro-voice 727 desk microphone, and matching Swan
117-C power supply and power supply with manual
works Great.....$139.00

Gonset GSB-201 desk amplifier runs 4 - 811's with manual wired
untested (pick up only Los Angeles) for 110 volts, output is 500 watts on
110 volts.
.....$240.00

Eico 625 Tube Tester with tube chart.....$75.00

Heath-Kit "THE TWOER" in EXCELLENT a COLLECTOR item for sure with the
AC/DC cable, and original heath-kit microphone $99.00

Heath-Kit HW-22 SSB Transceiver with original Heath-Kit microphone,
mounting bracket and matching Heath-Kit power supply.....$125.00

Heath-Kit AM-2 wattmeter.....$20.00

Micro-Match (vintage) # 262 RF Power/VSWR meter...$75.00

Autek Research Message Memory CMOS Keyer MK-1.....$75.00

Palomar R-X Noise Bridge.....$35.00

Palomar Tuner/Tuner PT-340.....$55.00

B & W # 595 6 position antenna switch......$30.00

Courier Port-A-Lab 500 wattmeter/VSWR/Modulation/Relative Field Strength
Meter.....$39.00

Maxon (TWO) CS-0510 4 channel handhelds with swivel cases (can't test do not
have a charger)
Both for $55.00

Yosan HJ-502 "NEW IN THE BOX, NEVER USED" WITH INSTRUCTIONS, AND ORGINAL
BOX
Power/VSWR/Modulation/ AND a frequency counter.....$85.00

Astron RS-20A needs new Positive +, Negative - posts put on ...$45.00

Kenwood SMC-25 speaker/microphone for the TR-2500, TR-2600...$20.00

Kenwood YK-88CN 270HZ C.W. filter on 8830.7 KHZ.
This filter will fits these models:
Kenwood TS-130S,130SE,430S,440S,530S,530SP,830S,670S,660,and
the R-5000. .....$60.00 shipped in the U.S.

Kenwood TU-4C (new in the box) is the Tone Encoder for the Kenwood
TW-4000A 144/440 MHZ dual band mobile radio $45.00
shipped in the U.S.

KENWOOD CK-18 WARC BAND COIL PARTS KIT FOR THE TS-180S (New In
The Box),(UNUSED) This will add 12, 17, 30 meters to your Kenwood
TS-180S, instruction manual included.....$65.00 shipped in the
U.S. ONLY

Kenwood IC-10 (set of two chips) these are required for computer
control when using a Kenwood TS-440S, and R-5000
.....$49.00 shipped in the U.S.

Please view my web
page.....

Source record: 42743
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.equipment,rec.radio.scanner

In article <L8fL8.1003$gg7.121877@news.uswest.net>, DAVE
<sklam@theriver.com> writes
>you are right, I did Simply hit the wrong group.

Err, no you did not "Simply hit the wrong group", you selected nine
groups without considering their applicability to your requirements. Few
people in Australia and the UK will have heard of "pima couny sheriff"
much less be able to receive VHF or UHF over such a long distance.

>And I'm ever so sorry for
>the horrible waste of your precious time! Can you ever forgive me? I will
>never bother your elite personal newsgroup again! Oh ya I will also never
>answer any of your posts or point you in the right direction again.

Unfortunately you found one of the few "little learning" types we have
to endure.

>SO, go
>crawel back into your mothers pouch and hop away you putz!

Difficult to do both I think.

>Raytheon missile and defense systems Engineering div.
>Tucson Az USA

Now that worries me, it worries me a lot!

i would suggest a HALO type of antenna
i know M2 and Par-Electronics both sell omni horizontal loop antennas that you could temporally mount on the roof of the car and if you stack two or more you can actually get some gain out of them
good luck

Message-ID: <5ntL8.14725$fT5.3537963@typhoon.ne.ipsvc.net>
Source record: 42746

I have for sale a Ten Tec Argosy II Model 525D in very good condition with original manual and Ten Tec hand microphone. I would rate it a 8 out of 10 and there is some light scratches on the case and power supply nothing major for its age. The power supply is the matching Ten Tec 225 with original manual. This rig has a digital readout and covers 10 to 80 meters and high output power is between 40 to 50 watts and low is between 4 to 5 watts. Here are some of the options that it has, hard to find 223A noise blanker,219 cw filter 250Hz and the audio cw filter 224. This rig is in fine working condition and a high serial number 25xx.....Will take $375 plus shipping in the 48 states only. I can be reached at 508-821-2993 or email.....WZ1U Steve

Hello all
I have a problem with my FT-847.
It was for more than a year un operate in my cupboard. Last night i
tried to operate it but it was impossible. It can be on i can see the
frequencies on display but i can't transmit or receive.
I reset it several times without success.
Can anyone help me before send it for repair?

Thanks

My handheld marine VHF radio is in need of replacement and I was wondering if there are any handheld VHF transceivers out there that will TX on the 144 ham band and the marine VHF band (156-57). That way I could get into 144 without any financial pain.

After reading the Circuit Description of the VX-7R
from the FCC web site (FCC ID: K66VX-7R)

I did not see anything on the 222MHz transmit. I would
like to understand from a Technical (VX-7R Circuit) how
the 222MHz signal is generated and why/where is the area
that limits the power to 300MW.

Anyone have a schemaitc for this radio?

If anyone would like a copy of the Circuit Description
email me.

Ok actually I had that problem my self..

What ever I did was hopeless.

Until I talked to my wife seriously about my hobby... AND THEN GAVE HER THE DELIMA

a)rigs , ps ,antennas OR

b)me looking at other women(just looking nothing else)

After 2 minutes I solved my problem... Its worth a try..

174. AR-210 TNC

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-06 17:08:34 UTC
From: David Hawkins <davidhawkins@dsl.pipex.com>
Message-ID: <3cff96cb$0$234$cc9e4d1f@news.dial.pipex.com>
Source record: 42684
Cross-posted to: alt.radio.amateur,rec.radio.amateur.equipment

Can anyone help please.
I bought this TNC at a radio rally and I've been trying to get it working.
Despite some initial problems I got it talking to a computer and everything
seems to be working well.
I then went on to make a cable to link it to my ICOM IC 24ET Handheld.
All went well and Tx seems to work. I am using 144.950MHz.
On reception of packet the DCD LED on the TNC illuminates but unfortunately
the computer registers no activity.
MONITOR IS ON. MALL IS ON.
MH does not show any heard stations.
If I use my old TINY-2 TNC all these show activity.

One positive is if I activate TRACE I very occasionally get some response
but it seems mostly rubbish.

Am I missing something or is something wrong with the TNC.

I have opened it up and there are no obvious problems. There are 3 variable
resisters. VR3 is the Audio output adjustment (from the manual) but the
other 2 are not listed - anyone know what they are?
Does anyone have a circuit diagram?

Any help would be appreciated.

Thanks in advance,

David Hawkins (G7IBO)

|Which hobby is that? Ham radio or getting married?

Actually, it's the getting un-married part.

My wife reminds me of that often.

Good morning OM

I would to ask all the possible info about Titanex GP antenna system.
In the next winter i must to change QTH, and i wanto to change antenna
system from GAP Challenger to another...
I have seen the fine TITANEX products and i would to find all the info about
the vertical GP 80/10 and GP 40/10....is there somebody can help me?
Is it self supported or need some wire?
Do they need Antenna tuner?
Do they need radials? Which lenght?
Do they work well? Better than what?

Many many thanks for your attention.....

Best 73 & GL

When you are playing with your radio, you are not:

sitting in a bar, drinking away the rent money,

carousing arond with other women,

or a hundred other things that she would have a REAL reason to complain about.

I have been amazed at how many XYL's have so many problems with this hobby.

When my wife threatened to lower the boom on my HF activities due to
her dislike of ANY antenna, I reminded her of all the above points. Now
we have a deal, She doesn't complain as long as I keep the antennas
discrete. So I don't have a big vertical, but do have a nice long dipole
that I hid in the trees.

Actually she is pretty supportive otherwise, and has even bought me new
ham toys!

Your problem is you don't have ENOUGH stuff yet. Go find a tail gate session and buy every box of junk and get as many clunker radios as possible. Don't matter if they work or not.

Now come back and pile them into your shack. Everywhere. Make a mess of it. You'll know you hit paydirt when instead of complaining to her mother "he's on that radio again" she now says "he's fooling around with those $&%^# radios again". Once it becomes plural, you have it made.

Now you can sneak in as many new radios as you want, and she'll never notice. If she does catch you sneaking in with one, you can always explain the great trade you made by swapping your old Binford 4305 with quadraflex tuning and heat seeking frequency sensors for it. Don't matter what you say, just jabber on she'll tune you out real quick once you start talking wattages and model numbers and other specs.

Works for me. I also smoke pipes. So far I've acquired four pipes, two radios, an antenna and various pices parts without her noticing.

Why do you assume the power is *limited* to 300 mwatts? Maybe that's all there is, to begin with. If you need more, Alinco makes a cheapo 5 watt 220 handheld.

And the ever famous "it's not mine, I'm holding it for a friend". I always
dread the "that's not the same radio you had is it?"
I don't know how I've managed to talk myself out of a jam so often.

But I look at it this way, as mentioned above....I'm not out in a bar
drinking away the rent money, or out bowling with the guys. All she has to
do is look in the basement and there I sit..happy, but not yet content.
Between the computers and the radios, I'm surprised she puts up with as much
as she does. But when she needs money for some new clothes, or wants to go
away for a weekend I alway pay. Gets me back in her good books!

Yeah...the majority of the dual banders will operate on Amateur, MARS, Marine, MURS, FRS, GMRS, but that legality gets in the way. You never know if the unit is transmitting only on that frequency, once modified!

Hello:

I recently passed the technican exam. I am researching what to buy for a transceiver. So far I have read up on the Yaesu VX7 and Kenwood TH6. Below are the items that would be important to me.
Please let me know if you have a reco for a first radio.

- would probably want a HT so it can be used in the house and car. Would not want to drag a mobile unit to/from the house/car.

- will probably use 2 meters the most since it seems to most active in my area.

- considering getting a discone antenna for mounting on the chimney. Good or bad idea?

- considering a mobile glass mount antenna for the car since it is a station wagon. How well do they work?

- should an aftermarket antenna be purchased right away to get better performance?

- does anyone have experience using a cell phone holder that mounts on the car door for holding the HT and using an external mic?

- will use the radio for monitoring marine and weather frequencies.

Thanks,

Barry

Barry, congratulations on the new ticket!
For more reviews than you can shake a stick at, go to:
http://www.eham.net

> - would probably want a HT so it can be used in the house and car.
> Would not want to drag a mobile unit to/from the house/car.

Everybody learns that this gets old real quick. Either you will
learn it as many others have, or you will do the right thing the
first time and get a mobile radio and install it in the car.

> - will probably use 2 meters the most since it seems to most active in my
> area.

Then perhaps the other bands of the radios that you mention
are a waste and you could do better with a less expensive
and more selective radio. DC to daylight has its price.
A friend of mine has been out in the boonies for five years.
She hasn't used the 440 side of her radio in all of that time.
It all depends on your location and where you intend to go.

> - considering getting a discone antenna for mounting on the chimney. Good or
> bad idea?

Fine for a scanner, but you will get several more dB with a
multiband vertical like those made by Diamond and Comet.

> - considering a mobile glass mount antenna for the car since it is a station
> wagon. How well do they work?

They are a compromise. Some newer cars have tint in the glass
that can attenuate quite a bit. A station wagon is one of the best
platforms for antennas. NMO mounts are cheap and easy, and
the performance and ability to swap antennas much better. Get
a 3/4" hole saw and be done with it! If this gives you the shivers,
get somebody who has done it before to do it with you.

> - should an aftermarket antenna be purchased right away to get better
> performance?

???

> - does anyone have experience using a cell phone holder that mounts on the
> car door for holding the HT and using an external mic?

Ugh, that sounds like no fun. Do it once, and do it right.

> - will use the radio for monitoring marine and weather frequencies.

Virtually every two meter (or multiband) radio does this.
An exception is the old HTX-202, a selective beast if there
ever was one. Note that many ham radios become somewhat
deaf as you leave the ham band; it varies by radio.

GE Portables

GE MPA VHF 146-162 full system keypad. Radio is as new and is almost perfect. The only flaw is the grip tape under the PTT button is peeling at the edges. Otherwise perfect. The next feature is, The radio is Key pad programmable. 16 channel scan and front face programmable. Has a like new battery and a good rapid charger. Also a belt clip. $500.00

GE MPA VHF Scan 157 - 174 split. 192 channels. Nice radio 8.5 condition with battery and standard charger. I have it programmed down to 154 MHz with no trouble but will go no lower. $225.00

GE MPA UHF Scan 440 - 470 192 channel scan. Radio works great. A little paint wear on the edges but I have seen worse. With charger and battery. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display. With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These look good and come with a battery and standard charger. 125.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha display. With battery and standard charger. $135.00

GE PCS VHF 2 channel. Like new 9.5-10 condition. 150 -170 MHz. With battery, antenna, leather case, and pocket charger. $100.00 each. 2 available.

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170 but I have programmed these in the ham band with no trouble. These have battery, antenna, and standard charger. $90.00 each
I have 7 of these.

GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can program these to the ham band. With battery, Antenna, and Charger.

$90.00 each. Have 3 of these.

GE MPS VHF Like new 12 channel. With new battery, new antenna, and a standard charger. $70.00

GE MPS VHF 12 channel. 8.5 condition. New antennas and NOS batteries

Standard charger. $65.00 each have 2.

GE MPS UHF 48 channel. 8 = 8.5 condition, These have NOS batteries

And have 4 banks of 12 channels. These can go to the ham band. I have been

Using one of these on my ham repeater and it works great. $75.00 each

I have 8 of these.

GE UHF MPS 8 channel with 8 different tones. 8 different tones can be

Selected for each different channel. Battery and antenna. $65.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1 good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I sold this radio a year ago but have taken it on trade. Condition 8 with belt clip and charger. I had this radio run for stolen from CSX by a local CSX Special Agent when I first bought these in a lot and was told that it had been sold at salvage. Perfect for a RR Museum or shortline on a budget. This could also be programmed for marine frequencies.

Like new tall Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms. $100.00

GE MVS VHF 128 channel scan. 136.-153. Split but I have programmed these as 150. - 174 split and they work fine. This radio has 8 modes of 16 channels. Includes Mic but no power cord or bracket. $175.00

GE MVS 800 conventional 2 channel. With mic tested OK $75.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240 450. - 470 Looks good. $125.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00 each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that I have seen marked Ericsson) $65.00

.GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger. 16 channel model has short cable and some handle bar mounts. Mic

included but no speaker. Not tested yet since I just got it in. $50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit charges your battery and turns your portable into a mobile radio. (Convert a Com) With mic, speaker, and power cable. $100.00

GE Accessories

GE TQ 2310 suitcase programmer. Has PLS, Phoenix, Delta s/sx, Voice Guard, MPS, and Ranger. Printer is working Has manual for the programmer and the computer. Has Phoenix cable and Voice guard cable. All in the original GE case tested and working. $850.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $30.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

GE delta Cables that have been cut to 2 foot long. Radio end with

power cables $5.00 each only have a few of these

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00

Other Radios and Accessories

Motorola Saber III VHF 146-174 split. 120 channel Alpha-Numeric display with secure - net module. (no out of country sales) des I think. I have been using this all week and talking on the ham band to test this radio. Battery has lasted all week during drive time so it seems good. With rapid charger and big battery. $475.00 or trade for a VHF MRK II

Icom 3200 a Dual band ham radio. Has box and manual but no mounting bracket. Has tone squelch board installed. $200.00

Icom IC 24-at Dual band Portable. In good shape, Display has no scratches and only 1 small patch of the paint is peeled off of the back of this radio. With manual and wall charger. $165.00

ADI AT 201. 2 meter portable nice like new and in the box with the manual. Has 5 watt battery and wall charger. $90.00

Yaesu ft 2400 2 meter mobile. Has Mounting Bracket and manual. Nice 2 meter Radio. $125.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great.

This was in my van before I added another MVS so I know it works.

$100.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery charger but I will split up the pair if someone wants 1 radio only. 6 channels programmed for 10 meter ham band on 2 repeater pair and 4 simplex frequencies. 2 radios and 1 charger $185.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $75.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Uniden SMS 825 TS, 800 MHz Dash mount radio. $55.00

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

MOTOROLA X9000 VHF 50 watts, alphanumeric head, Siren complete. $425.00

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola P200 UHF high power. 6 channel. $150.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS
Extra parts for suitcase programmers. Data modules, Printers, cables, proms, Anything you have extra. MPA or MPD portables what do you have and what do you want for them? Johnson scorpion program cable.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold

them for up to two weeks to clear before I ship. If you have a

question E-mail me.

I cut a deal with my YF, also a ham. It was this 3 nights out with the boys thing.

I got all the radios I wanted.

She cut it down to two nights out.

Seemed fair to me. {;-)

Perhaps a nice, expensive, linear amplifier under the bed might help.
Those things have been known to generate a little heat. If nothing else,
it will (generate a little heat) once your wife finds out how much you
paid for it - many people warm up when they're yelling at someone else.

Same here. My wife bought my first radio years ago after she realised I wanted one and has never complained once about anything I've purchased since. In fact, I have the perfect wife - she likes fishing, boating, country music, SUVs, cooking steaks on the grill, wearing tight pants, and practical jokes. In fact, she even points out the girls with short skirts I might have missed. What more could you ask for in a woman?

Source record: 42616

I'm thinking about switching from an Icom 756-pro to an FT-1000D but have a couple of questions. I probably can't afford a new one so I'll be looking for one that's used but in good shape. What kind of changes to the 1000D have been made over the years, or are they all pretty much the same, except for Rom upgrades? Anything in particular I should be wary of when looking? Just how good is the front end at rejecting sigs from neighboring hams on the same band? And finally, how would you compare the FT-1000D to the newer FT-1000mp Mk V?

Thanks for any input.

David, K4ZZR

Hi

Well i experienced the same problem myself....long time
ago.
But after a while I dicovered that I was using the wrong
tactic on her.

I startet to treat her the way I treat my equippment.
Gently in the beginning; First very smooth..trying out what
band she`s on? Then I check out what mode she`s in?
If she is in the "sleepy" CW-corner....save the poppers boys!
But...if she is on the SSB-plane....I slowly pump up the
volume....Pop a Champagne etc.....watch for the background-noise (bubbles)
appearing in her lower part
of the eyeballs? Now`s the time to put the processor
into play...not too heavy in the beginning...better easy
uppwards with levels of bubbles?
Wait untill the band really opens up...then u give her all
that u`ve got,inncluding the afterburner...forget leagal
limits and go for it !!! (USB or LSB ??? it`s her choice.)

Never had a complaint since I changed my tactics??
Hi hi hi !!

es vy 73!

It may be more of a marketing reason -- there arn't many people on or interested in 220, so put in minimal transmitting power. You might email Yaesu directly, to see if there is more power available, but if there was, it would seem they would make it available, to begin with.

Just a few considerations -- a mobile transceiver will have 10 times the power a handheld will. It will have bigger knobs and be easier to operate -- most ht's are little button-laden boogers that are highly non-intuitive to work. You'll pay extra for a speaker mike. And extra, about $90, for a higher-speed battery charger -- otherwise you'll spend 15 hours recharging the thing after just an hour or two, playing with it. And extra for a docking station booster, if you need more power. Then you've got an octopus of cables and pieces...

Still it's your choice -- I'd just recommend a mobile unit, though, for someone starting out. An ht, I'd get later, if at all.

It'd be worthwhile to get a copy of the Repeater Directory from the ARRL. It will give all the repeaters in your area, so you can figure out how many bands you want to get on your transceiver. You can also go to:
http://www.artscipub.com/repeaters/

Congratulations!

> I am researching what to buy for a
>transceiver. So far I have read up on the Yaesu VX7 and Kenwood TH6. Below
>are the items that would be important to me.
>Please let me know if you have a reco for a first radio.
>
>- would probably want a HT so it can be used in the house and car. Would not
>want to drag a mobile unit to/from the house/car.

Reasonable decision for starters. Be aware that the antenna
connectors on HTs often aren't intended for very-frequent antenna
changes, and can't stand a great deal of physical stress and strain
(this is particularly true of the SMAs found on the VX-5/7 and other
small HTs). Repeatedly disconnecting the rubber duck and connecting a
coax to an external antenna (or vice versa) may shorten the lifetime
of the connector.

>- will probably use 2 meters the most since it seems to most active in my
>area.

Before you spring for a VX7, you might want to consider seriously how
much you'd be planning to use 220. If there's not a lot of 220
activity in your area, you might not need the ability to work this
band (yet), and could save money by buying a VX-5 rather than a VX-7.
If there is and you want to work it, you might find that the VX7's
very limited transmit power on that band wouldn't be adequate, and you
might want to buy a different handheld (or buy one without 220, save
your pennies, and buy a dedicated 220 radio at a later time).

>- considering getting a discone antenna for mounting on the chimney. Good or
>bad idea?

Discones are compromises - fairly wide bandwidth, but often not terribly
good performers at any single frequency. You _could_ probably use a
single discone to cover 2-meter, 220, and 70 cm, but probably wouldn't
get optimal results on any single band. They seem to be more popular
for wide-bandwidth monitoring, than for transmission, due to the
difficulty in getting a low, flat SWR.

You might want to consider a J-pole (perhaps one of the multi-band
"copper cactus" varieties) instead.

>- considering a mobile glass mount antenna for the car since it is a station
>wagon. How well do they work?

Haven't used one myself. I've heard people say that they tend to be
lossy. A through-hole in the center of the roof will probably give
you the best results; a mag-mount or a clamp-on gutter/lip mount
would probably be the next-best choice.

>- should an aftermarket antenna be purchased right away to get better
>performance?

In my experience, the ducks supplies with the multiband HTs are often
compromise affairs... acceptable on all bands, wonderful on none. If
you're going to be working almost exclusively on a single band, buying
an antenna dedicated to that band might give significantly better
results and/or be more convenient.

From my own experience: I replaced the Yaesu VX-5 duck with a Pryme
RD-8 (with a Gulyas SMA/BNC adapter). It's more flexible and lighter,
doesn't dig into my side when I have the HT on my belt, and seems to
perform at least as well on 2 meters (haven't used it much on 70 cm
yet). I tested it on an SWR analyzer and it seems to match better on
both of these bands than the Yaesu antenna. On the other hand, it
isn't designed to work 6 meters at all (no provision for adding extra
length for that band), and seems to be much poorer than the Yaesu
antenna at receiving FM broadcast-band signals.

>- does anyone have experience using a cell phone holder that mounts on the
>car door for holding the HT and using an external mic?

You can do this, certainly. Two things of note:

- The small HTs aren't really designed for extensive high-power
transmission. At 5 watts, the VX-5 case heats up quite a lot... I
suspect that the HT is designed to use the owner's hand as an
essential part of the heatsink ;-)

- In mobile use, you're likely to want to adjust the squelch level
fairly frequently (especially if you're working simplex or are far
away from the repeater), and this is *not* convenient to do on many
small HTs. A definite benefit of having a real mobile is that the
volume and squelch adjustments are usually one- or two-finger
operations that can be done without actually looking at the control
panel.

I thought of doing just what you're considering when I started.
Several well-practiced hams warned me that it would probably be an
unsatisfying experience, and urged me to get a real mobile in addition
to an HT. A used 2-meter mobile in decent condition can often be had
for somewhere in the $100 range, it seems.

I sprung for a Kenwood TM-G707A and have been quite happy with it.

>- will use the radio for monitoring marine and weather frequencies.

Choice of antenna definitely comes into it there, and again there are some tradeoffs. An antenna optimized for 2M might not give you the best signal on these other frequencies. You could use a telescoping whip, and adjust its length for whatever you're trying to listen to, but these antennas are longer and heavier - often clumsy, may put a strain on the HT antenna connector.

Source record: 42630

It's probably because of the power devices they chose to use
in the radio. An issue of cost, perhaps, or perhaps an issue of
space on the board of the radio itself. I'd venture a guess that they
have at least 3 rf output modles/transistors in there for the final
output, and there isn't a 4th for 220 mhz. The engineers probably
found out by happenstance that one of the modules allowed a small
amouint of RF to be transmitted on 220 mhz, and then they capitalized
on it. There's no other good reason why yaesu would "restrict" the
power output. If the rig could do 2 watts or 4 rwatts or whatever on
220 they would have tried to certify and sell it that way.

I'd use 220 if my almost-DC-to-daylight rig didn't skip over that band.

It's a vicious circle: Because so few rigs cover 220, there are few
people on 220. And because so few people use 220, manufacturers don't
bother with 220 capability.

We've already lost part of 220; we'll probably lose more before long.

Hello-
For Sale, prefer pick-up near Houston, Texas area :
IC-451A with original box, manual and mic. In very good cond. Has some upgrades such as a transistor switch neatly installed for keying an external amp, plus an external coaxial relay which is doing the TX-RX changeover and feeding thru a GaASFET preamp. All neatly done and easily removable. Quality relay and preamp. This rig really hears well. 375.00 for all.
TS-700A in good condition with manual copy and hand mic. Has ARR GaASFET preamp neatly installed. Really hears well. 325.00 for all. Also have some spare modules { all of the internals from a nice TS-700A that the front panel was destoyed in car wreck}, boards and a complete parts unit TS-700A { I say parts unit, my intentions were to repair it} will sell all for 125.00
Several KLM 144-16-LBX antennas { used} and two of the M2 18XXX conversion kits { NIB}.
Trylon T-600-64 never used, assembled with extra heavy rotor, bearing plates { 3 each}
7213 { RCA 1500 watt UHF tetrode} cavities and tubes, several styles, for 144, 220 mhz.
Contact Byron WA5THJ at 281-331-1899. Thank you.

Greetings,

Give her lots of help, especially when she works in
the kitchen. Try to get each item just before she
needs it. Pick up anything she sets down and clean
it and put it away. After a while, she will ask you
to do something else. Then you can go to the radios,
but break off if she asks you to do anything and help
her. You do not want her to think of the radios as
her competition. Check with her before you buy anything.
Ask her lots of questions about what you should do.
Get her to think of the purchase as one of her buying
decisions. Agonize over every choice and share
the experience until she asks you to just buy it
and leave her alone.

Also:
- Fix things for her so she has a reason to
keep you around.
- Remember you have the last words, "Yes dear."
(If you do not believe me, ask anyone happily
married for 50 years.)
- Also, she is always the best. No one cooks
better, looks better, drives better, etc. .
Let others provide the reality checks. You
just provide the always ready support.
- Use humor (not same as ridicule).
- Acknowledge the fact, "You are wrong and
she is right."
- Listen to her but do not try to suggest
solutions to her problems. She wants
acknowledgment she has had an experience.
Read "Men from Mars, Women from Venus."
- Acknowledge and praise every thing she
does for you.
- She puts her life at risk to have your
babies. When someone puts their life at
risk for you, you need to take care of them.

Sincerely,
Bill Thomas

I have had two FT-1000D's, the PRO can run circles around it's receiver (figuritively).
The PRO is a far better radio in my book. I have totally given up on YAESU radios, and now have both a PRO II & (old) PRO.
Stop by my web page to check it out.

That she has her own truck, camper, and boat & motor. Knows how to clean and cook fish, clean and cook game and tan the skins, cast bullets and reload her own ammo, and last but not least let her hair down when you are behind closed doors and act like the girl your momma told you to stay away from.

PS - Sounds like you are a very lucky man and you can tell her I said so. Cherish her and treat her like the one in a million she is.

Here's the scenario. We're on a road trip traveling Route 66.
There's 3
vehicles traveling no more than 1/2 mile apart. In the middle vehicle
is an
historian on Route 66 talking about his experiences on the famous
highway.
What I would like to do is monitor his conversation in that vehicle
from the
other two. This gentleman will be in the passenger seat and I'll have
crew
people in the rear. The other vehicles will be equipped with cameras
photographing the scenery. We are not recording his conversation. I
own
Motorola GP300 VHF handhelds and a GM 300 base. I'm wondering if I
could
rig the base station with a lapel mic and have the guy in the back
seat flip
a switch during the stories. I understand that he can talk up to 5
minutes
at a time. I don't want to over tax the transmitter on the base. Any
ideas
or suggestions?
Thanks in advance.
Gary

What a bunch of wimps...LOL !!

Do what I did (this is the third time, so it may not be a perfect plan)....Look them in the eye and with a authoritive voice say "I was a ham when I met you, I'll be a ham when your gone....you pick the time"

Just kidding.

I have a Icom 4SAT UHF Mini HT with original rubber duck, has small cut in antenna near BNC. And also comes with BP90 Alkaline battery pack. No bottom cap or manual.
I recently purchased this unit and it works well, but unfortunately it doesn't cover any of the
Amateur frequencies at this point. It was sent back to Icom and completely retuned for the business bands.
It currently operates from 450-470mhz. $135.00 shipped cont. US.
If your interested please email direct.
thnx

No, we're very much two different people. I like big trucks and she likes "cute" little cars. When we first got married, cleaning fish was "icky," but she did learn how to do it. Neither one of us are too into weapons, but she did learn how to shoot a rifle years ago (and is not too bad at it). She has her college degrees (and is going for third in Mathematics), but actually insists I'm the smart one.

> and last but not least let her hair down
> when you are behind closed doors and act
> like the girl your momma told you to stay
> away from.

Well, if I say too much about this, you guys really will think I'm piling up the bull. But, heck, I don't get to brag about her too often. So, first of all, she is definitely something to look at (an actress and model in the past). And I'm the conservative one behind closed doors. In fact, she doesn't even like to stay behind closed doors - she wants to move to, and live, at a nude beach. And, on top of all this, my mother likes her (thinks I "picked the right one") and her mother, and father, likes me (thinks I'm a "stabilizing force" in her life).

And, finally, to add frosting to the cake, after 23 years of marriage, she still looks like she is no older then 17 or 18. And I'm not exaggerating about that - people actually think I'm messing around with a kid (they ask for her driver's license when she buys my cigarettes and one store clerk even openly accused her of faking the ID when she saw the birth date). I love it - one day, when I'm 80, I'm going to have a teenager for a wife.

I was able to buy the 6kHz filter from Piezo Technology; those are the folks that make that filter. Expect to pay around 240 dollars, if you can get them to sell it to you. I was working for Rockwell-Collins at the time, so they were fairly accomodating. As far as the other stuff, try Surplus Sales of Nebraska.

No, a much better approach to that is to say you're buying radio equipment so the two of you can talk as she is riding around town in the car. This works especially well if the two of you don't communicate much around the house in the first place - some talk deprived wives will do almost anything to talk more (especially if she watches talk shows aimed at women - these shows insist "communications" is the holy grail of marriage).

If she isn't fully convinced, explain how a $1500 base radio, a $500 mobile, and several thousand dollars worth of accessories (power supplies, meters, antennas, and so forth), is much cheaper than a cellular phone when you include the monthly charges for the cellular. Okay, perhaps you shouldn't mention the prices unless she is really dumb.

By the way, don't worry about actually having to talk once you get the equipment. If you purchase a radio with enough knobs and buttons, she will never figure out how to use it. Especially if you're a little vague when explaining it to her, and you slightly change the instructions each time (insist she must turn the frequency knob this direction the first time you explain it and the other direction the next time).

Don't forget to scare her a little as you explain how to use the radio. For example, "never touch this (something almost impossible not to touch) when you're using the radio or you'll break it." Mention how expensive the radio is and how much it will cost to repair if she breaks it.

If you're good at all this, she will never figure out how to use the radio, and will too afraid to try. At that point, you can blame the lack of ability to talk on her and she will actually believe it.

After about a month, explain (as sincerely as you can) how much of a mistake it was to get a radio for her car ("it's just too complicated for you to use in a car"). Offer to get her a cellular phone instead - much easier to use. You can then move her radio into your vehicle and have a nice mobile to use.

One last thing, if you really do get a cellular phone for her, don't forget to take the phone off the hook at home whenever she is driving around - you'll be far too busy talking on the radio to actually talk to her. :-)

Your technique is good, just not fine tuned quite yet.
Try this, it's low risk:

Bring a rig from your car through the kitchen. When she asks, tell
her you are going to fix it for a guy at work. After it is "fixed"
take it back right through the kitchen, make sure she sees it. Make
sure she sees equipment LEAVING the house, this is crucial, it's the
patented part of my procedure. Keep this up, doesn't matter what the
crap is (old test equipment, HTs, old power supplies, new transceivers
in nice clean boxes). When she is trained well you will know it, she
won't even look up, or else she will say, "Please get those Yaesu
boxes into the basement and out of my kitchen.!"
"Yes, Dear"

Dave....
I currently have both set up in my shack.
The 1000D has a slightly better receiver, but it is not nearly as flexible.
Being more flexible, there is also more room for error. This probably
accounts for a lot of folks deciding the PRO has shortcomings. No two ways
about it, the 1000D does have a better CW receive note....but not by much.
The 1000D's notch is nowhere as effective as the Pro's.
In my opinion, the ability to 'play' with the selectivity, and the
usefulness of the spectrum scope makes the Pro the clear winner.
Upgrading the older version of the 1000D's ROM makes it the same as the
later versions.
From what I understand, there were no major changes on the rig.
I would bet that none are being sold at the over $4 K price. They are
sitting around waiting for the $1600 closeouts. They now sell for a bit
under 2 grand on the used market.
It is nice to have the 200 watts in all one box. And, the 1000D's tuning
feel is second to none.
Regards....Dave

To sweeten the pot, you could put the ad in the "business opportunities" section - a woman like that would probably be thrilled to help other wives with their husbands' radio addictions. When the wife gets tired of screaming at the husband, the "hired gun" could continue nagging for her. Of course, doing this probably won't make you too popular with the other radio operators in town, but at least she'll be out of your hair if someone takes you up on the deal - that is until your new wife hires her down the road. :-)

259. Hallicrafters SX-88 Bezels FS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-08 13:21:19 UTC
From: Gary Harmon <gharmon@idworld.net>
Message-ID: <jxnM8.14290$wq6.1688325193@newssvr11.news.prodigy.com>
Source record: 42569

New replacement bezels for the rarest of the rare Hallicrafters SX-88 receiver are now available. Perhaps twenty percent of the known SX-88s have the warped bezel syndrome. There is no way to repair a bad bezel and this newly manufactured bezel solves the problem. They are machined out a solid piece of aircraft aluminum on a CNC machine. All the threaded holes, retaining tabs, openings, tapered faces, and openings are true to the original. They are finished in a wrinkled black satin powdered finish. NOTE: I am not making the bezels. I'm just acting as a facilitator. Bezel will be securely packed and shipped from California. A certain number of bezels must be sold before the second run of 20 can be authorized. Money orders and Pay Pal will get priority shipping when the bezels are available. Personal checks will clear before shipping. If a sufficient number is not ordered then payments will be returned. For questions or pictures contact me directly at gharmon@idworld.net. Seller will pay CONUS shipping. Out of country buyers will pay the difference.

Thanks and 73,

Oh yes, they are very real.

They are sold over the counter at HRO, but supplies are extremely limited. I recall something like "300" on the initial lot from Yaesu - don't quote me. Last time I looked there were only 4 left available at HRO (includes all stores) last Thursday.

I had the FT-920 for awhile. Good rig, but if you enjoy low band (30-50) listening, get the 746 or 756. The 920 has a huge receive gap from 30---48 Mhz, which I never understood why! Also, the 920 has the tendency to be very anemic, power wise. Its hard pressed to "comfortably" see 100 watts out. Other than that, its an excellent machine, and very affordable. I see them new now for $1080! Good luck.

More than any other [basically nonproductive] hobby I have ever
pursued, my wife just doesn't get ham radio and thinks it is
ridiculous. Every time the UPS man dropped off another box, I took
grief. Yet she likes and participates in off-roading, fishing,
camping, kayaking, etc.

I had to buy peace by agreeing to $3,000 more in new car frills.

Source record: 42573

Hi David...
If you're considering switching from a PRO to a 1000D I'm guessing that there is a receiver performance issue at hand since you mentioned "neighboring hams". The 1000D has been the performance standard for multi-op contest stations for some time with pretty impressive numbers. It has a blocking dynamic range that has never been equaled in amateur equipment. The 756PRO is an excellent 120db but the 1000D was a mind-blowing 154db. The numbers you'd be most interested in would be the IMD dynamic range and the third and 2nd order intercept points. The 1000D substantially exceeds the PRO in these two areas. In fact, the PRO had a rather dismal (by today's standards) 88db IMD dynamic range.. (the little Kenwood TS-120 mobile rig was better.. it's considerably better in the PRO II though) The 1000D has a pretty excellent 98db IMD DR. You will also notice a richer more lush sound of the 1000D receiver. I like the sound of my PRO, it's pretty good actually, but a quick switch to the 1000D makes you take notice of it's fuller presence. It's large one-button controls and heavy smooth VFO tuning knob makes it a tactile joy to use.
If you opt for the 1000D be aware of a few things... make sure that it has the latest upgrades! A friend of mine sent his 10 year old 1000D back to Yaesu for alignment and upgrades and it came back a "different, and better", radio. Components age, values change, they need a tune up once in a while. You'll miss some of the sexy flexibility of the PROs menu system and that wonderful band scope. (depending on how much you used them) There are some things that the 1000D will do that the PRO won't. For example, the 1000D has two completely different receivers and bandpass filters for simultaneous reception of any two bands. (PRO's second receiver is only useable in the same band)
Don't get me wrong... I own a 756PRO and love it... (I'm listening to it right now) we all know the great things about the radio, but for a heavy-hitting front end you need something different. I also prefer my Yaesu equipment (all loaded with INRAD filters) for CW on a busy band. The PRO gets a bit key-clicky in the receiver with nearby signals. I've heard there is a mod to improve this in the PRO, but haven't investigated it yet.
Fine examples of used 1000Ds are in the $2400 range on Ebay... thats the only measure I've used recently to determine their value.
You asked about the Mark V. If your neighboring ham is on a different part of the band than you are you could do no better than the Mark V. The resurection of the preselector, VRF in Yaesu jargon, substantially reduces assaults from strong in-band signals that are somewhat removed from your operating frequency. When in use the 2nd order products intercept point goes to a monsterous +120dbm... you would have to TRANSMIT in to the receiver with an out of band signal before it

would begin to degrade the noise floor! (do not try this at home, wideband emissions from a dirty transmiter could indeed harm the receiver) This preselector is before any active device in the receiver to help insure no additional noise is generated in the process. The Mark V had some very impresive numbers in other areas too, I'm sure you've read the reviews.
It's difficult to decide these things since there is a mix of perceptions, test data, rumors, etc. that ends up making it fairly subjective to what excites you most about a radio. Even then, it can still be a toss-up. For example, I'm going to 6 meters as soon as I finish this posting... My FT-920 hears slightly better on that band than my PRO, but the PRO's band scope lets me look for signals across the band without endless tuning. With today's contest I'm taking the PRO to the mountain top... but when I want to ferret out that weak CW beacon I use the 920. Always a decision!!
By the way, the numbers I quoted are from the ARRL reviews, 20 meters, preamps ON. (for consistancy)
Good luck & 73,
Dennis

> transceiver. So far I have read up on the Yaesu VX7 and Kenwood TH6. Below
> are the items that would be important to me.
> Please let me know if you have a reco for a first radio.

Congratulations on getting your Tech! That's a fine accomplishment, and I hope that you don't stop there. When I was looking for an HT I settled on the VX-5R. Although I've never used the 6-meter band, I use 2m and 70cm often, and the VX-5R's specs almost perfectly matched the list of things I wanted in an HT. I have never been dissatisfied with it.

> - would probably want a HT so it can be used in the house and car. Would not
> want to drag a mobile unit to/from the house/car.

I'm in that boat, since I don't have money for a dedicated mobile rig. I've learned that five watt output is fine for my needs. I don't do a lot of talking while driving--it's safer--and the only time *really* needed to talk (an emergency) I had no difficulty. Since your area is different, you may want to talk to other hams and get a feeling for how much power you'll need.

Using an HT mobile is a hassle. Unless you have everything you want programmed into the HT's memory you'll have to punch in what you want on the HT's tiny keypad--not a pleasant thought at 65 MPH. If you don't have a dedicated mount you'll have wires running across the interior of your car (antenna, power, speakermike), which makes things uncomfortable for a passenger. Plus you'll have to clip your radio to yourself (very bad idea with those extra wires) or leave it on the passenger seat and watch it hit the floor when you slam on the brakes.

> - will probably use 2 meters the most since it seems to most active in my
> area.

Then as mentioned by someone else, you'd probably get by with a dualbander or monobander. It'll cost you less.

> - considering a mobile glass mount antenna for the car since it is a station
> wagon. How well do they work?

I don't know about glass mount antennas. I use a mag mount dualband antenna by Diamond, and it works great.

> - should an aftermarket antenna be purchased right away to get better
> performance?

I assume you mean replace the "duck" that comes with the HT. I replaced my stock antenna with a Premier RD-98 dualband. The improvement was amazing.

I can pick up weather stations that I couldn't get before, and I can now work local repeaters using ~300-1000 milliwatts, when I used to use 3 or 5 watts.

Note: if you're buying an HT that has an SMA connector (VX5/7 and some others) you may want to consider installing, more or less permanently, a good SMA-BNC adapter. This will allow you to use a wider range of BNC antennas and make switching from the mobile to HT antenna easier. But be aware that with an adapter (especially the Yaesu one!) you can place more strain on the SMA connecter if you're not very careful.

278. I need help with the FT-817

Date: 2002-06-08 18:15:41 UTC
From: Casey <allecase@hotmail.com>
Message-ID: <hRrM8.4618$mh.180662@news1.telusplanet.net>
Source record: 42589

I have just purchased the FT-817 brand new via the Internet.

I have followed all start up procedures (attached front antenna, placed batteries inside, connected mic). I have only attempted to transmit on 2m since that is the antenna's rating. Every time I press the PTT in any mode except SSB, the radio turns off, when I do this in SSB the radio turns off when I make a sound. I have switched to a different 2m antenna on the front as well and have gotten the same result. I can only assume that the radio is turning off as a protection against high SWR. Is there something else I need to do to stop this, or is this a fault of the radio?

Thanks in advance for any suggestions

SWR protection normally doesn't shut the rig off. I would look at the power source. What're you using to power the radio? Are all of your connections good?

Hello Casey,
If you don't get an answer in the newsgroup there is a very active
FT-817 free email discussion group that is hosted by Yahoo. Here is
the direct link to it...

1. http://groups.yahoo.com/group/FT817/ - over 3,300 members

It's all free but requires a yahoo ID which is also free. Once that is
done you can have the Yahoo groups messages forwarded to your regular
POP3 email account and participate in the discussions through your
regular email program you already use.

A few things to check: make sure the batteries are OK - alkaline batteries have very short life, and carbon zinc are worse in this application. Set the front panel to read the internal voltage and see what happens when you key up. Also make sure you have selected the front antenna connection - it may be defaulting to the rear antenna.

Your batteries are near dead or your PS is not providing enough current. My FT-817 did the same thing on a PS that was to small. Works fine when I put it on a PS with more output. Same thing happens when the battery is near dead.

> interference...

I believe FCC Part15 compliance has to do with "radiation" from the device and nothing to do with receiver RFI suceptibility. I'm sure a ham with LoJack in his car wouldn't want to inadvertantly damage the receive portion unknowingly and then find out LoJack couldn't be activiated after a theft took place!

Its not intended to "replace" or compete with the FT100 or IC706, but is
a "new" catagory of "Portable.Base". I've seen it at the SeaPac convention
and it looks and works great. Yaesu says it should be hitting the market
in July.

Large Transmitting Coil - 5.75 L x 3 Diameter - Ebay

This is a very nice plated copper coil. It's 5.75 inches long and 3 inches in diameter. I measure the wire diameter at .0998, which is just slightly smaller than 10 gauge. There are exactly 4 turns per inch.

From: Dan Long <w4tq@mindspring.com>
Message-ID: <adu0sshen1@slb3.atl.mindspring.net>
Source record: 42510

Drake Low Pass Filter, 1000W - Ebay

This is the Drake 1000 watt, Model TV-1000-LP low pass filter. This filter can be used up to 52 MHZ with reduced ratings. The finish is tarnished on this filter, but it works perfectly, and the coax fitting are nice and tight.

For those who aren't aware, the purpose of the filter is to prevent the unintended transmission of signals (harmonics, for example) above the HF bands. The filter is placed between the antenna and the output of the transmitter (or transceiver). Aside from helping to comply with FCC regulations for signal quality, it will prevent certain types of TV interference.

Hi:

We have found a few more !

These are Motorola Factory (Not Clones, or Wanabee replacements) but
the real thing. Definately a way to protect your radio from becoming a brick
if you do your own programmimg

235.00+8.00 for S & H

Includes all the following in the photo:

http://www2.4dcomm.com/metrotech/m_ribox.jpg

Factory Motorola Rib Box with Battery & External Power Support
9 Volt DC @ 100ma Wall Adaptor
Factory Instructions
New 9 Volt Duracell Battery
Mint Rib to Computer Cable.
Shipped in the Original Anti-Static bag
small bonus (its in the photo)

I also have Premium program Cables from P50's to Astro-Sabers We also
make some of the best clones made from all Factory Componets, or if you
are handy @ building, you can save some extra bucks, build your own.

Terms:

PayPal Now Accepted !!

Acceptable PrePayment in the form of a Postal Money Order, PayPal (If
immediate shipping is desired) or a Personal / Business check is A-OK to
if you do notmind a Short Shipping Delay due to bank processing time. This
is required only the first time or two as once you are in the data base,
PrePayment is no longer required

Plse, SW is availible "Only" through Motorola C & E, so if you need SW, it is
highly recommended that you contact them and get the proper SW and Support
materials.....It's Cheap compared to a radio failure.

But after you get the Yahoo ID, Yahoo will FLOOD your mailbox with spam.
The moderators at that group won't even allow you to look at their FAQ
without a Yahoo ID, so I'm not sure it's worth it.

All I can say is WOW....thanks to each of you for your opinions and information. I've decided to keep my Pro - it really is a great radio and I'd hate to lose the scope. So, I'll start working on my wife to let me buy a second radio (wish me luck!).....you guys are either not married, or have your YL under some magical spell. :-) The prospect of actually having 2 HF rigs is hard to imagine.

Thanks again and 73,
David, K4ZZR

I have for sale 1 excellent condition AL-80A Amplifier w/10 meter mod.
This amp is good for 10 thru 160 meters.
The condition of the amp is a 9+. It has one little scratch on the plate
knob..
The case is in mint condition.
I don not have the original box but it does come with the manual.
I'm asking 600 plus shipping and insurance conus only.
If you are interested email at the above.
Thanks for reading this
Mike

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

How do I activate the PMS feature with my new Yaesu VX-7R? I go through the process shown in the manual but on that last step where you hold down the WRITE/MT/V/M button for a half second the display changes to MT instead of PMS.

(PMS here stands for Programmable Memory Scanning and MT for Memory Tuning)

Thanks,

Mike

317. VX-7R "My Menu" -- Help!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-09 15:40:45 UTC
From: Mike Barnacascel <ki6v@citlink.net>
Message-ID: <ug6t89rldn0ca7@corp.supernews.com>
Source record: 42528
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Page 82 of the manual tells how to change the function of the TX/PO/LK key. They call this the "My Menu" Short-Cut Key Setup.

The first step is to hold down that same key while powering up the radio. I do that and get some different beeps while the radio comes up but the display is normal when the radio powers up.

The next step is to choose the Menu Item you would like to assign to this key, then hold down this same key for a half second and the new function will be assigned.

When I do this and hold the key down for a half second nothing happens. If I continue to hold this key down longer the keyboard lock function engages.

Has anyone else figured out how to use this "My Menu" thing?

Thanks,
Mike KI6V

This morning I figured out what I was doing wrong! I was trying to use the MAIN band instead of the SUB-BAND to start the PMS feature.

The book doesn't tell us we have to be on the SUB-BAND for this feature to work.

Thanks to those of you who have responded to my question.

330. Repair Advice, Alinco DJ-F1T / DJ-F1TH / DJ-F4T Series (REPOST)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-09 22:06:12 UTC
From: "Paul W. Schleck" <pschleck@novia.net>
Message-ID: <3d03d0c3$0$32920$45beb828@newscene.com>
Source record: 42541
Cross-posted to: rec.radio.amateur.equipment,sci.electronics.repair

(Reposting one last time after two weeks with no reply. Also adding sci.electronics.repair to the Newsgroups: line. I will relent and send it to Alinco with a $40 estimate fee, and $60 minimum charge, if nothing heard after two more weeks.)

I have an Alinco DJ-F1TH 2-Meter (144-148 MHz) Handy-Talkie (HT) radio which has what I would guess to be a common problem. Specifically, if it is dropped in a certain way, the top retaining clip for the battery (molded into the plastic case) will break off and the battery will not stay seated (unless you put a rubber band, etc., around the HT). Fortunately, this clip isn't molded into a monolithic case. Rather, it appears that the molded top retaining clip is part of a smaller piece of plastic on the top of the HT that incorporates the knob and antenna holes.

The part is #KU0075, and is available from Alinco for $3 + $5.50 shipping. No problem there. The problem is how to get it off (as well as the reverse problem of getting the new part on without breaking it). As this is an old radio (first came out in late 1991), I'd like to avoid sending it in for service ($60 minimum shop charge). The PDF service manual is available on-line at:

http://www.alinco.com/pdf.files/Service/djf1ser.pdf

but it does not contain any assembly/disassembly instructions other than an exploded view diagram (and the KU0075 part is shown in this diagram still attached to the inner frame of the unit). A check of the Google newsgroups archive at:

http://groups.google.com

didn't find any previous posts on the subject. Alinco customer service at:

alinco@alinco.com

hasn't (yet) replied to my question about this.

I can open the two halves of the shell per the user's manual. I don't see how I can get the top piece off without removing the BNC connector (i.e., it has a lip wider than the hole). I don't see a way to remove the BNC connector without desoldering it, and even then, it isn't clear how to get it out of the hole. Is there some kind of "trick" to removing the BNC connector or the top part of the case via other means (i.e., does the BNC connector unscrew or otherwise have some sort of lock ring or tension clip on it)?

ARRL reviewed the DJ-FIT (I'm not sure what the H adds) in 1992. One of their comments was about the poor battery attachment method.

Of course, I don't know your personal financial situation, but I would use this as an excuse to buy a new HT. After getting a new HT, I would either use the DJ-F1TH as a backup as-is, or consider ordering the part and attempting to figure out how it is installed.

Just curious, is that $40 + $60, or is the $40 applied to the $60 if you accept the quote? If it's $40+$60=$100, I would certainly opt for a new unit!

It could be but on the other hand, if you are going to put transmitting components inside the rig, how much can you save by crippling it?

Roland

338. Uniden HR 2600 10 meter transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-10 00:11:10 UTC
From: Mark <grandmhg@gocougs.wsu.edu>
Message-ID: <ug7rnj9ovsd7e1@corp.supernews.com>
Source record: 42399

For Sale: Uniden HR 2600 Amateur Radio. It has had the microprocessor replaced and now works on 10 and 12 meters. (You must have a valid amateur radio operator license to transmit with this radio.) Please email me for information on modifications. I recently had the final transistors replaced by a professional technician. He also tuned it up and made sure it was in good operating condition. It puts out a solid 10 watts on AM and FM and around 40 watts on sideband.

It will transmit and receive from 10 to 12 meters on CW, USB, LSB, AM, and FM. There are 4 separate bands with memories and will do split operation for 10 meter FM repeater operation.

Comes with the original hand microphone (UP/DOWN) in good shape, DC power cord, original operating manual and ChipSwitch manual.

Disclaimer: A previous owner has installed inch high "legs" on the front edge of the bottom of the radio. Also, the original connector in the back has been altered by adding a toggle switch for internal/accessory speaker and RCA jacks. There is no mobile mounting bracket. Due to the type of equipment and age, it is being sold "AS IS" but not DOA.

$250 shipped , insured, to US address. I accept Pay-Pal or money orders only. Please email me for additional info or photos.

Mark , KF7JA

339. Re: Mark V Field?

I believe the only difference is the power output. But, instead of taking a chance on getting bad info from the newsgroups, why don't you spend a couple of bucks and call Yaesu? After all, you are going to spend $2000 to 2500 bucks! You also might find out if the transverter will work with it.

73,
Scott

I've built and used the TenTec 1551 Speech Processor Kit.
http://www.tentec.com/amaccyKit.htm#1551store
Worked quite well on an old Atlas 210X. It's a small board so you
could probably install it inside most boatanchors.

If you want an RF speech processor, you may be able to find one of the
Daiwa's that were supposed to be quite good, RF-440, RF-660.

I have a TS-940SAT that is in good working condition EXCEPT: (1) FM output is low, transmit audio is good. Output varies from 10 to 50W depending on the band; (2) AM audio not there - just a hum, and carrier output varies from 2W to 15W depending on the band. SSB, CW and FSK output is fine. SSB audio is fine. No optional filters installed. Sub Display backlighting and meter lamps all work. The antenna tuner works fine. The power supply and final unit cooling fans are quiet.

Cosmetically nice EXCEPT for (a) a 1/2" hairline crack on the clear plastic window (a search of PacParts shows the plastic window is still available for about $20) just beneath the meter, and (b) a little ding on the top edge of the "UP" 1 MHz step pushbutton. The knobs are very nice. Front panel corner edges have various areas where paint wore off. The case has minor scratches and scuffs. It still looks very nice. SN is 6XXXXXX.

Comes with an up/down hand mic, original inner/outer boxes, the AC cord and a good copy of the instruction manual.

Asking $500. Local pick-up only please. I'm located in Windsor Locks CT. Please email direct - ah6bv@arrl.net

Thanks, George AH6BV / w1

I know there are rigs that cover 220MHz, but there aren't many of them.
I would be reluctant to buy a 220MHz-only rig, because we may still lose
the band altogether and then I would have a useless rig.

To match my TS711A, I would like to trade my FT900 for a TS440S/AT (with tuner).
I would rate the Yaesu at an 8 1/2 out of 10. Chasis has some scratches from being
mounted mobile under my seat, but the detachable head and front are mint.
Comes with an Astatic D104 hand mic. Has built in tuner, This is a
great way to go HF mobile. Does not include the YSK-900 separation kit.

Let me know what you have..

361. HT: VOX headset, speaker/mic or boom mic?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-10 11:20:32 UTC
From: cprstn54zz@att.net
Message-ID: <3d0489ee.249339859@news-server.optonline.net>
Source record: 42422

I've ordered up Yaesu VX-150 handy talkie but couldn't decide on the accessory.

Most folks seem to like the speaker/mic, but I've seen many with the earpiece/boom-mic (and PTT). Hands-free VOX looks appealing but I am concerned that it will be triggered by ambient music, engines, wind, nearby speakers, etc. Anyone care to impart some words of wisdom for me?

Also, many people seem to be using the Pryme speaker/mics. Is that because of price? or performance?

I'm sure it can be done, but does that mean you're listening to all signals, SSB included, through a CW filter?

VOX is not to my liking. It might be good if you were net control for a fast paced activity where that is all you were doing. If you are in a position where you are talking to others as well as on the radio, you will be better off with a PTT.

I don't like the headset type things because they seem to be more noticeable. I used a speaker mic clipped to my collar for a long time. I picked up one of those jobs where an ear piece fits in your ear and the mic and PTT switch in on a little block that clips to your shirt. So far I like it. Works great in areas where there is a high ambient noise level.

This is a nice, nearly new looking Sony 7600G. I bought it several years at HRO, used it only a few hours. Thought I had to have it......you know the story. Anyway if you're looking for a nice radio, in original box, supplied with all papers, inst. manual, shortwave guide, Sony leather pouch, Sony shortwave antenna, this is the one for you. It goes on Ebay next sunday, or you can buy it now for $150, + UPS. Photos available upon request. Reply to my email address: stevepaint@clearwater.net
Thanks!

Hello Ken,
I know that the Motorola gp68 can be programmed to work in
CHANNELS Modes as well as in Vfo mode.so simply switch between 2meter
and marine channels.
Any success let me know.
Good Luck

1994 Grand Caravan

The rear seat well where the seat attaches to the floor has a hole with a rubber plug which will accept a RG-58 coax so you can get the coax thru with out drilling a hole.

I sent my primary 12 v cable thru a hole in the fire wall near the gas pedal. It had a rubber plug, just remove it and send the cable thru, then plug the hole with electrical duct seal. Attach your primary to the Battery and fused at the battery, I almost burned up my car when I was 25 and not too smart, for failing to fuse the primary at the battery, so do it.

Good luck.

dj

Yes -- the P.A. brick is toast.
The Power Out display on the lcd is simply an idiot display
for the selected power setting -- that only appears when you
squeeze the PTT switch.

Sorry.

I have for sale the Yaesu FRG-7 receiver in excellent condition and it works great. Very sensitive, very accurate frequency readout, smooth pleasant audio and fun to operate. Please look at the photos on ebay #1354876755. I was the high bidder for the receiver but have just acquired an Icom R75 so I have decided to sell the Yaesu. It will be carefully packed before shipping. Check my feedback as "rbb2". I am asking $250/OBO because of its excellent condition. Thanks for looking.

73,
Bruce K6RQR

Sounds the same for me - I never look at her mail order bills/shopping receipts/ask why she drew the money from the bank....etc.

In the same way, she does not see my Yaesu bills/read my magazines (prices!) or get taken anywhere near the new equipment at rallies/conventions.

Also - prime your friends to never talk 'money' relating to radio costs when the XYL is in the room.

If this fails and she says "how much did the radio cost..." just tell her that you purchased the large screen TV/VCR/DVD/Satellite or Cable in the lounge for her - as she probably watchs that a lot more than you do!

(Probably works the same way for XYLs who like radio and their OMs don't.)

Hi

I just recently found a satellite dish lying looking forlorn, and just had to rescue it.

I plugged it into my Sky box and although I couldnt aim it properly it DID seem to give some signal, suggesting that the LNB is functional.

So...

1) How can I 'remould' it (its bent)
2) What use is the LNB?
3) What do I need to use it for radio astronomy?
4) Where do I get a down converter?

the LNB has (annoyingly) lost its manufacturer lable, but has another lable on it saying

```
+----+ B
| | G 648
| | Z
| | 223 D
+----+ T
```

Enhanced L.O - 9.75GHz
EA 1.1dB typ. noise figure
EK 1409401361
Made in UK

the box above is really a logo. some kind of bird.

I am going to try and make my own antenna mount with some old stepper motors and some nylon gears...

No, that won't work. Once you modify a type accepted (or whatever
it's being called now) rig, it's no longer legal on the original band.
The situation is no different from modifying a ham rig to work on
a non-ham band.

Because that's the way they designed it!
They probably put in RF transistors that are good to around 220 and the
power probably falls off where 220 is near the upper cutoff. This is just
speculation though.
220 is not a real busy band in most areas so they concentrated on the more
active bands to give more power to those bands.

It's all about Marketing and making something for as little as possible.

I just bought one but it hasn't arrived. If you do get it, do it
before 6/30 to get the $30 coupon. Ross Distributing sells them new
(with coupon) for $120.

Also, if you intend to get the FBA-25 battery holder (for 6 AA
alkalines) let me know. They seem to be 1/3 the price in England,
with shipping being the only problem. Maybe orders can be combined.

>some old 2M HT or mobile.....

I was going to follow up in two week's time, but the level of rant (and misinformation) in the above post motivated me to do so earlier.

The HT in question is 6 years old, not 10. To be fair, the replacement cost of an HT, *plus* incompatible accessories, including a spare battery (essential for public service communications), speaker microphone, DC power cable, etc., is closer to $200. Nowadays I would probably want to spend my money on a dual-band, so up that estimate to $300 (or more). The cost of new amateur radio HT's has not gone down nearly as fast as computer hardware or VCR's, so the comparisons given above are somewhat disingenuous.

Obviously, I was hoping to fix this radio myself, and avoid the significant labor charge on a minor repair. Stating the non-trivial cost of a factory repair was also intended as a way of motivating someone reading this newsgroup to provide the necessary instructions. Even if such advice is not forthcoming from this newsgroup, and I am faced with the prospect of sending it in to Alinco, it is still cost-effective (to me) to spend $60 to repair and refurbish a 2 meter HT

in otherwise perfect working order. Even if I eventually purchase new, I still have use of the older HT as a spare or a loaner for many years into the future. Doing so also preserves my investment in the incompatible accessories, and defers the waste and disposal costs of throwing away working Nickel-Cadmium battery packs (Don't forget to include this toxic-waste disposal in the total cost of ownership). Other nontrivial concerns include:

- The established reliability of equipment on the flat part of the "bathtub" or Weibull curve (new equipment suffers a uncomfortably high rate of infant mortality, old equipment simply wears out). Cost-effective maintenance of equipment well within its service life should be a no-brainer.

- Retraining my head and fingers to work the incompatible controls of new equipment in the dark, during a severe weather emergency, etc. Even during initial setup at my leisure, I'm not keen on re-learning how to set up scanning ranges, memories, non-standard splits, tuning increments, subaudible tones, power levels, etc., on a new piece of equipment.

I hope that this clarifies the economics, as well as my motivations, in seeking repair instead of junking and replacement.

You may want to check out the New Alinco DJ-196T. Your DJ-F1 Speakermike,
DC Power cord, headsets & antennas are all still compatible, & the radio will
give you Alphanumerics, ctcss & dcs (dpl) enc/decode & Nickle-hydride 5w
battery, all either optional or unavailable on the older model, great
additional features for Public service, & you're still under $150 delivered.
Even a good spare higher cap hydride Batt from Mr. Nicad is about $39, or the
Alkaline case is $15. ASSuming a $75-80 total on Parts/labor + shipping for
repair on the older unit, your still shelling out almost 50% of a new one, even
assuming the purchase of a 2nd new battery, & if the old F1's batteries are 4
to 6 yrs old.............

Hello. I need to ID a SMD part on my IC-2000H. It is on the front panel PCB, front side close to the power button 1/2" directly above the DS3 lamp. It is also slightly under the edge of the LCD panel. There are two sets of SMD pads one with a 1K (102) resistor on the left side and the other with the pads of the missing part. It is the same size as the 1K resistor and could be either a chip resistor or cap. Anyone have the service manual, schematic or have one they could look at and get me the info as to what part goes there? The radio received an impact and the little part fell off and is long gone. Also there is no part ID on the board at all. (i.e. R101, C201 etc.) I also need the pin out of the mic. connector.

Thank you,
Randy KB8ASO

Tim,

I've had one for about a month and a half now and personally I think it is the best 2m handie I've ever had. Lots of audio both receive and transmit, and the battery pack seems to last a good time, although I never use it on high power. I did purchase the Vertex speaker mic but am told by the local hams it sounds muffled. I opened the receive up to copy the local Provincial Police and it couldn't have been easier. Covers roughly 125 to 175 Mhz. The belt clip is super tough, don't have to worry about it falling off. I wouldn't hesitate to buy another one, I don't think you will regret the purchase.

Max

Buy It !!!

I have owned mine now for about a year and love it. But you do want to get the AA battery holder with it. Fill it with NiMH batteries and you really have something to "write home about". With the stock battery pack mine runs roughly 8 hours of real world usage. With the AA battery holder and 6 NiMH batteries (Ray-O-Vac's bought at Wal-Mart) real world usage is around 30 hours. Plus I recharge my NiMH batteries in a "Rat Shack" charger that way you don't have the VX-150 in use as a battery charger for 12+ hours each day.

The Frederick Amateur Radio Club will be hosting the annual Father's Day Hamfest on Sunday, June 16th, rain or shine, at the Frederick County Fairgrounds on East Patrick Street in Frederick, Maryland.

The Father's Day Hamfest features a large amateur radio, electronics and computer flea market, new and used radio and electronics equipment, antique radios, computers, tools, cables and other technical and hobbyist items. Good food and refreshments are available.

Gate access for flea market setup starts at 6:00 AM. General admission access starts at 8:00 AM. Free testing for FCC Amateur Radio licenses will be conducted, starting promptly at 9:00 AM.

General admission is a $5.00 donation to the club. Flea market spaces are available for $5.00 each plus one general admission. For more information, visit the Father's Day Hamfest web site at http://www.qsl.net/k3erm/ .

The AES catalog price listing shows an optional 30V power supply and a relay option which imply transverter compatability with the Field and the basic MP. Read the fine print and call AES to verify.

428. TNC Stops Updating GPS Posit

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-12 06:09:38 UTC
From: Douglas Gavilanes <gavilan1@earthlink.net>
Message-ID: <3D06E76E.C22007F7@earthlink.net>
Source record: 42489
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

Anyone ever have this problem? I'm running a Tiny-2 (version 5.0 firmware) TNC with a Magellan GPS315 connected to its serial port, with the NMEA 183 ($GPGGA) mode activated and sending GPS sentences. Bauds are properly set, and all seems well. Yet after about an hour or less, the TNC no longer updates the posits and shows me at the last posit that it cares to hold for whatever reason:

http://www.findu.com/cgi-bin/find.cgi?n6xqy-12&radar=***

shows me somewhere I was hours (or days) ago, even though the packet may have been transmitted minutes or seconds ago. Even stranger, every so often, the old stale posit is actually updated to a fresh one, which is then held for another eternity. The TNC faithfully send my LOC as instructed, but the GPSTEXT doesn't get updated. It seems that the TNC is interrupting the data stream from the GPS arbitrarily, and I can't find a cause. Anyone have any ideas? I've replaced the GPS serial cable and null modem cable with new, but no luck. I have found that the GPS will halt sending data via the serial port, possibly due to the TNC, but reinitializing the GPS starts the data flow again. Pac-Comm must be tired of my calls by now, and Magellan can't figure this one out either (they just discovered APRS from my phone calls). Any guidance here is appreciated. All I want is mobile APRS...

David;

I bought my FT-1000MP Field March 30th, 2002. The 6 meter transverter
will NOT work with it, since it requires 30 VDC, ie, same PS as its
big brother, the first original 200w Mark V.
Good receiver and features. Wait for another coupon deal from Yaesu
and buy it for $1925.
Good Luck,
Jim, K4SQR

431. Most overpriced Yaesu accessory -- $50 battery holder

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-12 11:50:34 UTC
From: cprstn54zz@att.net
Message-ID: <3d0733e5.52942625@news-server.optonline.net>
Source record: 42492

I just bought a Yaesu VX-150 2M HT. There is a 6 AA battery holder accessory that fits it and several other Yaesu HT's, the FBA-25. It lists for over $50, discounts for $39 (without the freakin' batteries). It looks the same as the $3 battery holders at Radio Shack.

Would someone please start making these and put a stop to this rape job by Yaesu?

From: Henry Kolesnik <wd5jfr@oklahoma.net>
Message-ID: <ugefg4t914eb3a@corp.supernews.com>
Source record: 42493

I just got an Advantest TR4110 Tracking Scope and TR4113AL RF Section. I've searched the net for info, but no luck. It's made by Advantest in Tokyo, Japan and seems to have some similarity to the older HP 141T. Tektronix has no info becasue it's too old! Does anyone have a manual or a copy that I can buy or point me to where I can find some info. Short operating instructions would be nice as I'm not sure if it works as it should and correct operating procedure would be nice.

tnx

I have that radio, and bought that accessory. Yes, it costs way too much,
but all my HT's have akaline packs so I *had* to have it (but my wallet
did a "yelp" when I got this!)

I suspect its a by-product of the heritage of this radio. The Vertex line
is more 'commercial' radio rather than 'amateur' radio.

Yes.

Also they said the radio was a good deal. But they didn't say we make
it up on the accessories.

If worse comes to worst, I will protest by using a $3 Radio Shack 8 AA
battery holder in a Zip-Loc with a line to the radio. That's what I
usually do when they play this game.

They forced you to point out the obvious?

439. Help needed: Yaesu FT-90R separator kit connector bad...

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-12 16:59:58 UTC
From: Robert Myers <rjmyers@raytheon.com>
Message-ID: <3D077E0E.E57F497F@raytheon.com>
Source record: 42350

I'm having a lot of problems with the connector that came with
my FT-90R separator kit. Seems that it will do a number of things:

1) hitting "down" button most of the time causes the system to
go "up"

2) pushing PTT may occasionally also cause the channel to change
downward

3) hissing sound/sometimes broken connection (mike stops functioning).

Apparently Yaesu won't sell this 6-conductor female/female block
separately. They want me to send the entire separator kit, possibly
with the radio, back to them for their diagnosis.

I know it's not the mike at fault, due to plugging it directly into
the base and it working 100%. Unfortunately, this does me no good
while driving down the road.

Any thoughts/ideas??? I've tried getting a 6-conductor block at the
local Radio Shack -- seems to not make contact at all (as if it wasn't
connecting).

The Circuit Description manual located at the FCC web site
states the same output amplifier transistor is used for
6,2, and 440MHz.

There might be hope for more power at 222MHz yet...

444. WTB: S-Band (13 cm) RHCP Hemispherical Omni Antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-12 19:50:18 UTC
From: "M.C. Maguire" <nomcmaguirespam@hotmail.com>
Message-ID: <3D07A5ED.29EE9FF8@hotmail.com>
Source record: 42355
Cross-posted to: sci.electronics.equipment,rec.radio.amateur.space,rec.radio.amateur.equipment,rec.radio.amateur.antenna,sci.electronics.design,sci.engr.radar+sonar

I am looking for a commercial supplier of an S-band (2300-2400 MHz) right hand circularly polarized antenna that has a broad hemispherical pattern (-3 dB at +-60 deg or more from boresite). Pattern is more important than gain. Must be suited for outdoor and low temperature use.

Here is ideal antenna:

http://www.condorsys.com/pdf_files/as48915.pdf

Three problems: it costs 53 dB$ (~13 dB too much), it's space qualified (overkill on environmentals) and takes 150 days to get an order filled (need in 30 days).

Thanks.

Hi Mike,
I had same problem with Kenwood 261a. showed full output but in fact there was none. The RF output meter showes what should be going out I guess.

My problem proved to be the final Module.
it is mounted onto the rear heatsink and on mine the plastic cover simply came off giving a clear view of the circuity on the board. A close inspection revealed a broken trace which I was able to bridge with HOT soldering iron. The heat sink cools off the iron very quickly so be fast.
On mine it was a cheap fix and has lasted for about a year now. so Good luck.
Don

Buy the a decent phone crimping set, make sure it's designed to crimp
across the width of the whole connector. Then, buy some 6 pin modular
ends. They'll look the same as standard phone connectors, however there
will be 6 copper pins in the end of them. Then, start looking at one of
the ends of the suspect cable. You should be able to distinguish some
colors. Write them down. Also, make reference to which end of the
connector is towards you, and wether the 'clip' part is up or down when
writing down your color order. Then, with the power off, and cable
disconnected, snip the end and crimp on a new one. For someone familiar
with crimping telco connectors, this really is a 2 min fix. If you're not
comfortable with it, buy some telephone cable and practice a bit.
A side note, check the pins in the female (socket part) ends, make sure a
pin isnt bent flat, or into another pin.
Good luck

I was up at ARRL headquarters yesterday 06/11/02, and they had BOXES of Extra Class License books for half price. I'd say that the pool really is changing at the end of the month.

Pet peeve: I wish the ARRL would put dates on their products, rather than saying NEW version all the time. EVERY version they come out with is a NEW version, but sometimes NEW doesn't mean up-to-date. Flame off.

If you had bought the Icom T2H instead you would only be
getting raped like $20 for battery holders. Not to mention the T2H
comes with a significantly better antenna.

Only downside to the T2H is it is a bit of a pain to program if you
are not used to icom radios. Hell, now HRO is selling the darn radio
for $89 w/empty battery case! I use mine with NiMH AA cells, which
I charge in external fast chargers.

Fallback on the T2H when I looked at it, is it made no provisions for
external DC power (ie cig adapter). It's why I went the yaesu line,
(besides the fact that I went dualband.)
I do own an Icom F21, whick is the commercial radio that shares the same
chasis as the Icom V8. It doesnt allow for external dc power, but it's 6AA
battery pack was only 18 bucks at comdac.

Hi All,

1. Does anyone know if the rubber duck is actually tuned for 222Mhz?

2. If it isn't, when operating on 222Mhz at 300mW, is it likely to damage the finals on the unit or should one seek to change the antenna with one that is tuned to 222 Mhz?

3. Theoretically, if one can mod the radio to 5W on 222Mhz and if one transmitted with the stock ducky could this lead to damaging the radio also?

They did. The Technician changes July 1 of 2003, and General changes July 1
of 2004.

I think they also changed the frequency of changes to the pool, from 3 to 4
years so Extra won't change until 2006. But I could be wrong on this, using
my very foggy memory on this one.

And here I thought you might choose to use a Zip-Loc.
That's what I do ... as well as for my camera batteries.

It's just a choice thing ... certainly you knew the cost of the extra
battery pack when you bought the radio ... and could choose to
purchase a different radio, or use normal Ham Radio ingenuity to
solve the problem, thus causing Yaesu to lose a possible sale,
or a sale of accesories. Those lost sales are the best revenge.

Search for the G3RUH s-band patch feed on web. This antenna is about $150
and can be special ordered for RHCP. It is normally used as a dish feed for
AMSAT AO-40. The frequency range is about right on.

Are you using for XM or Sirius? I wonder how these would work out compared
to stock antenna!

Source record: 42370

For all the experimenters at large:

I am an electronics distributor during the day, and a part-time college instructor at night. Most electronics stores do not serve students and/or electronics enthusiasts very well in my area. I am setting out to change that (at least in a small way) over the summer.

I am looking for nice simple projects for students to build, especially those which are Amateur Radio related. Besides drawing some from the ARRL publications, I'm hoping to incorporate many from the "traditional tinkerers" at large. If you have a special project that you are especially proud of, which you want to live on... I would be most happy to hear from you.

Best Wishes,
& 73 de N6RKY

468. Philco-Sierra 164B power/swr meter & slugs advice, please?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-13 14:35:19 UTC
From: Richard J <nospam@mah.se>
Message-ID: <aeaap5$5r4$1@news.lth.se>
Source record: 42378

Hi group -

I will soon receive a Philco_Sierra 164B power meter (used by US and Swedish military) with two slugs at a good price.
There seems to be a shortage of slugs for sale for these meters (Bird-style, but still not), which makes me wonder about one thing:

I will have one 50W max slug for 50-148MHz. Is it possible to use this slug for higher power measurements also, provided that a homemade shunt on the uA-meter can bring the readings down by factor 10? Or is there sensitive stuff in the slug (or in the meter) that will burn if I try to run say 300W thru it? I am thinking of PIV of older crystal diodes, or bimetal parts, or resistance wire that will burn up when too much RF power is applied...
The meter has a 25uA, linear instrument, BTW, which leads me to believe that the basic construction/concept of it is a RF Voltmeter using a IN34 or similar diode. Havent seen the circuit diagram yet, tho.

All tips and advice appreciated, as always. Or maybe there is a slug for sale at a decent price in this group?

Cheers from Sweden /Rick, SM7SCJ

Just got this radio secondhanded a few days ago. This radio requires a 13.5V power supply, but I've just been using it as a receiver for now, hooked up to my Astron RS12A supply, and worked fine for about 3 days and have been receiving many QSO's from all over. But have never transmitted at all on this radio, don't even have the mic plugged in.

Today when I powered it up, the blue LCD freq display on the front failed to come on. The radio was obviously getting power, and the meter lamp came on, along with speaker output, but no front display. Checked voltage on power supply - putting out 13.71V. Tried the tuning knob but could not tell if the receiver was cycling through freqs or not. Just a fairly steady low hiss of no signal, so I can't tell if the tuner is working or not anymore.

What did I do wrong? Why the sudden loss of the LCD screen? I could not check Amp output on the PS but it is rated at 9A continuous and radio was working fine until today. Has anyone had similar problems with this unit? What can I do to fix it?

Thanks,

C.N. Brown

I use only the best freezer bags as my project boxes. Also Tygon tubing. Both insulate -- and shield well when wrapped in aluminum foil.

Having spent upwards of $3,000 on gear in the last year, I have to economize somewhere.

I understand the marketing strategy, but when it results in $50 battery holders it has gone too far. I probably wouldn't have sqwaked at a list of $30 (a mere 10X FMV) but $50 was just off the scale. They must think we are the US military and have money left over after the $1,000 toilet seats.

Message-ID: <3D08DBFE.5000005@earthlink.net>
Source record: 42386

Do not try to use the 164B on higher power by shunting the meter. You
will obtain only relative readings, because the output from the diode
in the slug will no longer be linear. The best way to utilize the
50-watt slug on higher powers is to use a calibrated directional
coupler. There are other ways, but they require a fair amount of test
equipment and a knowing how to adjust/calibrate the slugs.

I know whereof I speak. I wrote and validated the calibration
procedures for the AN/USM-120

476. FS: Drake Station & Synthesizer

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-13 17:57:26 UTC
From: "Robert S. Stein" <w6nbi@earthlink.net>
Message-ID: <3D08DD06.3010408@earthlink.net>
Source record: 42387
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.marketplace

Drake R-4 Receiver, T-4X Transmitter, MS-4 Power Supply/Speaker with original manuals. The R-4 comes with several extra crystals, which are really not needed if used with the the frequency synthesizer. $450.00.

Frequency synthesizer for the above, which I designed, built and published in the August 1972 issue of "ham radio" magazine. I will supply an original issue of the magazine (cover slightly torn), as well as schematics of all the circuits which improved performance but were never published. This synthesizer provides complete coverage from 500 kHz to 30 MHz, thus including the WARC bands. $275.00.

If necessary, I will sell the synthesizer separately, but if a buyer takes all, I will reduce the total price to $700.00.

Buyer pays shipping. However, I prefer a pickup in the San Francisco Bay Area or will arrange to meet at a reasonable location.

Bob, W6NBI

Ken wrote:
> I've ordered up Yaesu VX-150 handy talkie but couldn't decide on the
> accessory.

Can't really offer advice on the mic/speaker question, depends largely on your intended use (outdoors, loud places, indoors...) I prefer a boom mike myself. However, owning the same unit, I urge you to get something akin to http://www.eham.net/reviews/detail/1268 at your earliest convenience, or at least try one out at a hamfest/store. the rubber duckies have very pathetic performance (though are compact). It's as if I got a new radio when I swapped the antenna :-)

Good luck, and loads of fun with your new toy/tool ;-)

Thanks for the input...

However, I was able to stop by a local electronics store and
pick up the coupler for a grand cost of $ 0.89 + sales tax.

Radio now works great...problem solved...

479. Re: Philco-Sierra 164B power/swr meter & slugs advice, please?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-13 19:18:46 UTC
From: Richard J <nospam@mah.se>
Message-ID: <aearck$9j8$1@news.lth.se>
Source record: 42390

Right, Bob - tnx fer the advice. Since I mailed this request I found out
that this meter is nothing but a
AN/URM-120 (very common and very underrated) meter, so it should not be too
hard to find a high-power slug after all.

I knew I was on the wrong track, when I looked thru ARRL handbooks from the
60:s for info on RF wattmeters - the slugs have diodes that break
down.....so much for that idea :-)

ANyway, I am now in the market for a working URM-120-compatible slug , say
CU754A (25-250MHz, @500W), at a decent price. Any offers appreciated to
sm7scj@qsl.net

Tnx fer your time, Bob, and cheers from Sweden /Rick, SM7SCJ

Hi group -

I am looking to buy a working , decently priced slug for the AN/URM-120
(Philco, Sierra 164B etc) pwr meter.
Slug no CU754A (25-250MHz@max 500W) wud be a good start.

Ideas, reasonable offers to sm7scj@qsl.net

Thanks in advance and cheers from Sweden

Rick/SM7SCJ

Source record: 42301

Well I found out to day that the Yaesu VX-7R is as they claim
waterproof.

I was on vacation and accidentally dropped it and the Motorola FRS
radio I was carrying over the side of the boat. It lay at the bottom
of (Rainy Lake) 7 feet of water for about 45 minutes while I got
brave enough to go in after it.

Man that water was cold!

The radio worked fine. I am however letting the FRS dry out real good
before trying it.

I used the one feature I thought was not really worthwhile.

Hi there

I have just been given one of the above radios a Maxon PM150 it was given to me with no information just that it was working wich it is not now when I power it up just the chanel lights light up and no display.

Does anyone have any info on these radios apart from whats available out of the broucher and mainly how are these sets reprogramed I persume its through the mic socket like the motorola range.

If anyone could help me out with this set I would be very gratefull.

thanks
Paul

501. FS/FT: AMD K6-2 500mhz CPU and fan BRAND NEW

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-14 02:52:22 UTC
From: vhfradiobuff@aol.comspamsux
Message-ID: <20020613225222.25805.00000923@mb-fh.aol.com>
Source record: 42311

I am selling an AMD K6-2 500mhz CPU and fan. I bought these recently on the internet because I had a problem with my old computer. After buying them, I decided to just upgrade completely, so now I don't need them. I am selling them for best offer or willing to trade for ham radio gear. Please email me directly if interested.

Please if you have questions or want to make a trade contact me off list at my e-mail address. gundoc@i... Some of these lists are not swap lists and only tolerate my post because it is only once a week. To the group owners thank you for letting me continue

to post to the group.
Dean

GE Portables

GE MRK II UHF Scan 192 channel 2 line Alphanumeric display. Rapid charger, Speaker mic, extra battery, and leather case. $450.00

GE MPA VHF 146-162 full system keypad. Radio is as new and is almost perfect. The only flaw is the grip tape under the PTT button is peeling at the edges. Otherwise perfect. The next feature is, The radio is Key pad programmable. 16 channel scan and front face programmable. Has a like new battery and a good rapid charger. Also a belt clip. $500.00

GE MPA VHF Scan 157 - 174 split. 192 channels. Nice radio 8.5 condition with battery and standard charger. I have it programmed down to 154 MHz with no trouble but will go no lower. $225.00

GE MPA UHF Scan 440 - 470 192 channel scan. Radio works great. A little paint wear on the edges but I have seen worse. With charger and battery. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display. With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These look good and come with a battery and standard charger. 125.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha display. With battery and standard charger. $135.00

GE KPC 300 VHF 16 channel scan. Nice radio with battery and antenna. No charger with this one. $100.00

GE KPC 400 UHF 16 channel scan. Full DTMF pad on this radio. This one has a charger. $195.00

GE PCS VHF 2 channel. Like new 9.5-10 condition. 150 -170 MHz. With battery, antenna, leather case, and pocket charger. $100.00 each. 2 available.

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170
but I have programmed these in the ham band with no trouble. These
have battery, antenna, and standard charger. $90.00 each
I have 7 of these.

GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can
program these to the ham band. With battery, Antenna, and Charger.
$90.00 each. Have 3 of these.

GE MPS VHF Like new 12 channel. With new battery, new antenna, and a
standard charger. $70.00

GE MPS VHF 12 channel. 8.5 condition. New antennas and NOS batteries
Standard charger. $65.00 each have 2.

GE MPS UHF 48 channel. 8 = 8.5 condition, These have NOS batteries
And have 4 banks of 12 channels. These can go to the ham band. I have been
Using one of these on my ham repeater and it works great. $75.00 each
I have 8 of these.

GE UHF MPS 8 channel with 8 different tones. 8 different tones can be
Selected for each different channel. Battery and antenna. $65.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1
good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I
sold this radio a year ago but have taken it on trade. Condition 8
with belt clip and charger. I had this radio run for stolen from CSX
by a local CSX Special Agent when I first bought these in a lot and was
told that it had been sold at salvage. Perfect for a RR Museum or
shortline on a budget. This could also be programmed for marine frequencies.
Like new tall Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms.
$100.00

GE MVS VHF 16 channel Scan 150- 170 MHz. with mic. tested $125.00

GE MVS 800 conventional 2 channel. With mic tested OK $75.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240
450. - 470 Looks good. $125.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00
each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr
II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that
I have seen marked Ericsson) $65.00

.GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger. 16 channel model has short cable and some handle bar mounts. Mic included but no speaker. Not tested yet since I just got it in. $50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit charges your battery and turns your portable into a mobile radio. (Convert a Com) With mic, speaker, and power cable. $100.00

GE Accessories

GE TQ 2310 suitcase programmer. Has PLS, Phoenix, Delta s/sx, Voice Guard, MPS, and Ranger. Printer is working Has manual for the programmer and the computer. Has Phoenix cable and Voice guard cable. All in the original GE case tested and working. $850.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $30.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00

Other Radios and Accessories

Icom 3200 a Dual band ham radio. Has box and manual but no mounting bracket. Has tone squelch board installed. $200.00

Icom IC 24-at Dual band Portable. In good shape, Display has no scratches and only 1 small patch of the paint is peeled off of the back of this radio. With manual and wall charger. $165.00

ADI AT 201. 2 meter portable nice like new and in the box with the manual. Has 5 watt battery and wall charger. $90.00

Yaesu ft 2400 2 meter mobile. Has Mounting Bracket and manual. Nice 2 meter Radio. $125.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great. This was in my van before I added another MVS so I know it works. $100.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery charger but I will split up the pair if someone wants 1 radio only. 6 channels programmed for 10 meter ham band on 2 repeater pair and 4 simplex frequencies. 2 radios and 1 charger $185.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $75.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Uniden SMS 825 TS, 800 MHz Dash mount radio. $55.00

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

MOTOROLA X9000 VHF 50 watts, alphanumeric head, Siren complete. $425.00

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola P200 UHF high power. 6 channel. $150.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS
Extra parts for suitcase programmers. Data modules, Printers, cables, proms, Anything you have extra. MPA or MPD portables what do you have and what do you want for them? Johnson scorpion program cable.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a

question E-mail me.

You can get MIL spec toilet seats for only $1000? (Grin)

Many cell phones have a similar problem: batteries cost way more
than seems reasonable. Have had good luck with www.batteries.com
though ... reasonable prices, quick delivery.

522. Clegg FM-76 220 MHz Local/Remote Mod????

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-15 00:40:32 UTC
From: motg@stratos.net
Message-ID: <efd5c18c.0206141640.6d03642c@posting.google.com>
Source record: 42332

As you know the Clegg FM-76 and the Midland 13-509 are vintage 220 MHz crystal transceivers. I own 3 of these radios that I have picked up at hamfest through the years. Almost every one I have ever seen incorporates a modification that appears to be a means of trunk mounting the radio. Does anyone know why this mod was so popular (I'm guessing that theft may have been a big issue as the radio resembles a CB).

Does anyone have a copy of the mod or know where it appeared (Ham Radio Magazine, 73, CQ, QST??)

I would love to get a copy of the mod if you have it.

Thanks and 73,
Frank K9IC

524. Lem Nash; What a piece of work!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-15 01:42:19 UTC
From: Gerald Schmitt <KK5YY@ARRL.NET>
Message-ID: <sq4lgu4occv390p3ub2r0kcs51149nsggr@4ax.com>
Source record: 42335

Some refreshing intelectual input from
Mr. Nash. What an asshole. No wonder
he has no credibility.

"well then dont read it you jerk.
somehow you never change.
same ass hole as always.
go flame murray or some of you other
targets. "

"you always jump in a discussion and
have nothing to offer. notice you posted
nothing concerning a 775dsp.
get lost big time"

"you are just as stupid as always.
you have never had a 775dsp.
you and your wife are queer folk.
get it asshole or do you prefer to
call me on the phone so i can tell you
what a dick licker you are"

"you are also a coward . just ask
anyone that has dealt with you.
got it boy. a coward."

"whats wrong , dick breath. no guts
lets get it on!"

End of words of 'wisdumb' from Lem Nash I can't help but wonder
if Mr. Nash drinks or perhaps has some other substance
abuse problem.

With all the above sent to my mailbox I sure wonder
why I ever valued Gary Fibre's word over this
gentleman's.

Lem baby I'm in Alaska and the salmon are
running sorry but I don't have any time for a loser
like you. While I'm away perhaps you'll find time
to grow up; your grade school antics certainly don't
impress or intimidate me and I'm sure you have made
a lasting impression on those who might do
business with you.

I have asked you nicely not to spam my mail box
so now you are on auto forward to abuse@aol.com

Oh and yes I may have owned a 775DSP but you have no
way to know do you?

TS-450S Audio OK receives static only! No signals Reply
by WA6RSV on June 14, 2002 Mail this to a friend!
Hi and thank you for reading this

I turned on my TS-450S today and all I can hear is static and good audio but not ONE signal...I checked x-mit and it's fine and I know the antenna is fine because I connected my stand-by HF and it receives plenty good.

it is puzzling that when I connect the antenna the level of static goes up as if were receiving normally yet it does not receive ONE station on ANY band.

Any ideas?

Thanks

Pablo Lewin
WA6RSV

RE: TS-450S Audio OK receives static only! No sign Reply
by WA6RSV on June 14, 2002 Mail this to a friend!
I am adding additional information....I seem to be receiving strange harmonics every 25kcs (I am sober by the way :-)) also I fired up my stand-by hf on 14,200 CW 100watts to a dummy(arbitrarily) and I can find the signal on the TS-450 at all!!, harmonics and plenty of static but no zero beat...puzzling....any ideas??

Thanks

Pablo Lewin

529. VX-7R - TX in aircraft band?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-15 04:30:12 UTC
From: joel@generators.com
Message-ID: <9f2570a7.0206142030.6d70581f@posting.google.com>
Source record: 42340

Does anyone know if the VX-7R will TX in the AM mode in the aircraft band if the freeband mod is performed? My read on the specs is that it will TX 1 Watt of AM at 50 Mhz. If anyone has performed the mod, could they investigate the possibility of AM TX in the aircraft band. If so, how much power is it producing? Thanks.

You might pull the battery, open it up and leave it in a warm
spot overnight. Once a little moisture gets in, it moves around
and electrolysis does it's damage.

Not many "waterproof" radios survive full submergence without
immediate inspection and intervention.

Good luck.

Jim

Doesn't matter how much power it produces, because even if it will transmit AM there, it's illegal to do it. The VX-7R is a ham rig, so it'll likely put out spurs all over the place and cause interference. This could cause someone having trouble not to be heard. You want to risk killing somebody so you can fuck around with your ham toy on the air band? This is serious shit, retard!

It's OK to modify your HT and risk losing your ham license (if you've got one, good buddy) by transmitting on the Taco Bell and McDonalds drive trough window channels or by bugging little kids on FRS. It is by no means cool to transmit anywhere where your transmissions could fuck up somebody's life. I hope this is clear to you and all the other converted CBer/no-code Techhies that insist on doing this kind of shit. I wish all you fucks would get caught and shipped off to prison, where you can explain to the ass-rapers there just how playing with a walkie-talkie makes you a cool dude.

those 757 's had a bad habit of that a bad power switch was the prob ,
unplug the p.s. and unscrew the side screws as if you were splitting the
radio open
and just lift the lid slightly and put back in place and reapply power to
the radio and it should be ok

Hello,

This great valve databook is still in stock, but it will now be soon
out of print and difficult to obtain. 660 pages with comprehensive
data on nearly 6000 types - European, Russian and American
manufacture. A lot of curves and operation conditions on each type.
This is a very large book of 29 x 21cm and the weight is 2.5kg
You can find more information and pictures of it at my web site
www.demostenes.no

Regards,

Arnold Goks&#65533;yr

Hi Group,

Trying to repair a 120 that worked until the other day, I discovered a orange wire that connects to either the volume or rf gain.

Maybe someone who has a unit could look under the cover next to the volume control and tell me where it needs to be connected?

Thanks,

Paul de KJ4UO

I'm certain that a lot of hams modify their radios to cause intentional interference with public agencies. However, is it really fair to place ALL hams into one bucket?

Two years ago I used my ham rig in my truck to call in a medical helicopter after a guy suffered a serious neck and back injury in a car accident 100 miles from the nearest town. A Search and Rescue guy(also an off-duty police officer) attempted to make contact on his commercial radio and by cell phone and was unsuccessful. We were in Utah's west desert and was unable to get anyone to come back to me on several ham repeaters. So much for that., so I dialed up the sherrif's dispatch freq and they came right back. We were able to get the guy air lifted out safely.

I for one, will ALWAYS modify my rig for that "What IF" situation.

Flame suit on.

I use two of the MAHA external fast
chargers. It is somewhat of a pain to have to
pull the batts out each time, but it is fast and
they work good. I got two of them for $60 with
batteries... that was HROs dayton special
last year... not sure what the chargers
cost now. Plus you can also use the
chargers for other stuff, I think they handle
nicads as well.

In an emergency, where someone's life is at risk, and all other means
available have been tried and do not work, the FCC reg allows use
outside licensed bands. The example above would clearly be covered.

Where you could be on thin ice would be in having the rig premodified.
Also, some mods done could cause noisy transmissions during regular
use on authorized frequencies, and you would be responsible for that.

Licensed hams do not routinely cause intentional interference with
anyone. That does not make sense.

Happy trails,
Gary (net.yogi.bear)

558. Radio for the Australian Bush

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-16 05:53:22 UTC
From: Steve <~@~.com>
Message-ID: <MPG.1776cbdbfb9e1c09896e8@news-server>
Source record: 42269

My apologies if this post is inappropriate for this newsgroup.

Anybody know if there any small AM radios available that are suitable for hikers in very remote areas? By remote I mean locations in Australia that may as far as 500 kilometres from the nearest AM transmitter.

I don't know anything about radios, but I imagine it would need a jack for an external AM wire antenna. Because the radio will be carried in a rucksack and I will be in the bush for 10 days at a time, the radio should be light-weight and small, it would probably use an earphone jack rather than speaker.

Any help or a pointer to a more appropriate newsgroup will be much appreciated

Steve

559. Re: VX-7R - TX in aircraft band?

Message-ID: <9f2570a7.0206152253.5062c96a@posting.google.com>
Source record: 42270

While the original followup to my posting barely merits a response, I would like to point out that I am an FAA Certified Instrument-Rated Private Pilot and that my query was merely a technical inquiry as to the potential of the VX-7R to serve as a last resort backup in the unlikely event of a Comm failure. I currently own a Yaesu Aviator Pro VXA-100 handheld which is charged and ready for this scenario and have had to use it in flight once due to an alternator failure. Indeed, the VX-7R is not type-certified for such operation, and the use of cell phones while airborne is illegal; however, I would resort to either means in the case of an emergency.

Communication loss under instrument flight conditions is a potentially life-threatening emergency. As I was in the market for a new handheld, and the VX-7R does have some AM capabilities, I was merely trying to determine if this could be a last resort backup. I have no interest in talking to kids on FRS, or ordering burgers from the air.

Now, on to the intelligent discussion, engaged by those that use their actual identities.

Starting from scratch -- Does anyone know if the VX-7R will TX AM in the aviation band .. and if so, how much power?

Steve

Your best bet for a suitable newsgroup would be aus.radio.scanner however I'll try to answer your question as best I can.

If you will be 500 kilometres from the nearest AM transmitter, daytime reception will be probably be weak and noisy. Night time reception should be much better.

You can get radios that have enhanced AM (Medium Wave) reception such as the "GE Super Radio" or the "Realistic TRF". Dick Smith sell a radio made by Sangean called the "Outback II" at a price of $AUD150 dollars which has enhanced AM reception however all of the above are larger sized portables.

With most Medium Wave portable radios they have an internal "Ferrite Bar" antenna. To get the best reception you should rotate your radio around until you get the best reception. External loop antennas would also enhance your reception however these are not commonly available in Australia and must be imported from specialised suppliers.

You might be better off buying a radio that has shortwave bands as well as AM (Medium Wave) reception. ABC Radio have specialised "Outback" shortwave services on either 2310, 2325, 2485, 3230, 3315, 3370, 4835, 4910 or 5025 Khz. Suitable receivers might be the Sangean 404, 505 or 909 receivers. Sony make a number of a small radios and even make specialised antennas for their portable receivers.

I hope this helps

Pick-Up Only - Northern CT

I have a Wilson SY-33 3-element tribander for sale. Was up and in use until a month ago - taken down from a roof tower w/c I am replacing with a real tower. Complete with original instruction sheet and complete hardware set. Won't need to buy anything - just assemble and use. No guessing on traps and elements - I marked them when I disassembled into manageable lengths. Asking $100 firm, picked-up only Windsor Locks CT (midway between Springfield MA and Hartford CT).

Please email direct - ah6bv@arrl.net
Thanks,

George AH6BV / w1

I'm not aware of any current amateur handheld device that transmits in the AM mode, period. So whether the vx-7r will do so in the aviation band seems moot.

AM broadcast stations have no incentive to transmit their signals to remote locations where there are few people, so you may have limited luck here. However, any small shortwave radio, that receives the worldwide bands, should be fine for listening to shortwave stations in remote areas -- you could probably get "local" news from any Australian station broadcasting on the shortwave bands.

Sounds like you're not the only one to lose an alternator. We had to resort
to our Icom A2 halfway between Salt Lake and Boise.

Dittos,

Nowhere have I ever seen "AM airband transmit capabilities" in the
brochures of any ham radio models of any manufacture.

Have not even heard of amateur multi-mode rigs that do this.

Always a good idea to carry backup portable radio and instrument
package in case of electrical or comms failure, and there are units
that are designed for this purpose, such as your VXA-100.

While I'm not familiar with the capabilities of the VX7R, the quick test is does it have AM transmit capabilities for any of the bands it legally covers? If not then I seriously doubt it has airband AM transmit. Yaesu is not going to spend the money adding AM transmit capability to a radio that doesn't need it. I suspect you're probably out of luck.

Mark

As for the original responder, he rants and raves about CBers, while using language straight off of Ch. 19, so what makes him any better? 13wpm doesn't make you God (maybe a priest, though?).

I have used the IC-756 and the FT-920. In fact, I use an FT-920
for all of my contest operating activities. The current used prices
of the FT-920 make it an excellent choice (definitely less than $1000).

With the release of the IC-756ProII, the 756 has dropped in price and
at under $1500 it is a good buy, too.

Personally, I like my FT-920 to which I have added an Inrad CW filter.
If you need more flexibility in IF bandwidths (ie. both CW and SSB
options) I'd suggest the IC-756 with the flexible IF-DSP filtering.

Unfortunately, the FT-920 fits only a single optional filter (either
CW or SSB). Inrad sells a modification kit to allow more than one,
but that entails more work and expense.

Have never tried the IC-746 or TS-570.

According to http://members.fortunecity.com/swradios/vx7r.html , the
VX-7R does transmit 1W of AM at 50 Mhz. I'm wondering if this can be
stretched up to 108-135 Mhz? I doubt it, but it's worth asking.

583. Yaesu FT-50R Battery

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-16 21:41:18 UTC
From: anoop@alumni.duke.edu
Message-ID: <50bde0e6.0206161341.54ae569@posting.google.com>
Source record: 42294

I bought a Yaesu FT-50R back in 1996. I used it for
a couple of years and then pretty much shelved it until
now. When I tried to use it a couple of days ago, it
wouldn't work even after several hours of charging.
However, I can turn it on when it's plugged in or when
it's running on AA batteries. Does this mean that the
battery is dead or could it be a problem with the
contacts?

Thanks,
-Anoop, AF4LA

signal on the TS-450 at all!! >>

Pablo-

Is the attenuator disabled? That won't make as much difference as you
describe, but I felt I should mention it!

A good dummy load with good shielding of the rig and connecting cable, may not
emit enough signal to pick up on a nearby rig. This may be unlikely, but I've
had that problem before.

One possibility is that the TS-450 IF filter is defective or has a loose
connection. Try unplugging it and reinstalling to be sure it is firmly seated.
If you have another filter such as for CW, check to see if the problem exists
using that filter.

My first thought was that your Phase Lock Loop might have come unlocked.
However, I think the display will go off if that were to occur.

It is possible that the radio is actually dead, but static is being picked up
through the Noise Limiter or Blanker circuit. Check to see that it is turned
off, and if that makes any difference.

If you have the service manual and necessary equipment, you should be able to
localize the problem by stepping through the alignment procedure.

Good Luck.

The battery most likely went to battery heaven.
6 years is a long time for a Ni-Cad.
Time for another.
If you would like to confirm this, find somebody else
with an FT-50 and try his/her battery. There are FT-50's
all over the place.

Good Luck, Mark

Agreed... It does seem unusual that Yaesu would add AM transmit to an amateur handheld, however, according to specifications I've obtained (http://members.fortunecity.com/swradios/vx7r.html), it indeed DOES transmit 1 watt of AM in the 6m band (50Mhz).

I've gone completely to NiMh AA's in an alkaline pack. This works well. The batteries are inexpensive and easily replaced. The only disadvantage is having to open the pack and change the batteries. I keep two sets and just swap them when my pack runs low. You can get a set of 4 batteries and a smart charger for around $25. That is a lot cheaper than $60 for a new NiCd pack and $80-100 for a drop in charger.
"Mark Russo" <mrrusso@optonline.net> wrote in message

The battery most likely went to battery heaven.
6 years is a long time for a Ni-Cad.
Time for another.
If you would like to confirm this, find somebody else
with an FT-50 and try his/her battery. There are FT-50's
all over the place.
Good Luck, Mark

Anoop Ghanwani wrote:

I bought a Yaesu FT-50R back in 1996. I used it for
a couple of years and then pretty much shelved it until
now. When I tried to use it a couple of days ago, it
wouldn't work even after several hours of charging.
However, I can turn it on when it's plugged in or when
it's running on AA batteries. Does this mean that the
battery is dead or could it be a problem with the
contacts?

->> Private Pilot

The word is "certificated".

->>
->> Starting from scratch -- Does anyone know if the VX-7R will TX AM in
->> the aviation band .. and if so, how much power?

That is an interesting question, and one that should be answered by somebody who has a better working knowledge than the ignoramuses that post "I don't know but probably not". That is a very definite maybe, and hardly worth the bandwidth. Seems that some investigation is in order.

My chart satchel has an aging STS in it, and if I had something that would get me by in a pinch, you bet your sweet hiney I'll argue the matter once I'm safely on the ground. I'd much rather do that than squawking 7600 and hoping somebody tries to talk to me on (purposely omitted) emergency frequency using the old "if you hear me, squawk ident" trick.

Maybe somebody out there who actually HAS a VX-7R and could TRY it into a dummy load might be willing to answer? 122.75 is a noncritical "air to air multicom" that won't upset ATC if you want to use that frequency into the dummy load, understanding that even dummy loads radiate microwatts.

"music man" <edhall consultant@yahoo.com> wrote in message
news:<aejqlcejv1@bob.news.rcn.net>...

The problem I had with using AA battery packs for NiCd or NiMH batteries
was the contact resistance between batteries in the pack. The 13 contact
resistances added up and caused a voltage drop that made the pack's
voltage appear low when transmiting. The result was the radio turning
itself off before the batteries we really fully discharged.

Having given up on AA packs, I started buying NiCd or NiMH inserts. This
is cheaper than buying the complete pack. Try www.batteriesamerica.com.

Source record: 42213

For Sale:

Alinco DR-150T 2meter mobile radio. Rated at 50W output, Recieves from 108-174 MHz AM and FM, as well as 70cm band (forget the exact frequency range). Transmits from 136 to 174MHz (mars/cap mod performed). This radio transmits EXCITER POWER ONLY (~50mW) The Toshiba VHF RF final module seems to be defective. Maybe if you have another radio with this module or this module lying around this could be a great radio for you. Besides transmitting, the radio recieves fine, memories work, buttons work, etc. This radio was not used mobile, but was transported from Ohio to Newfoundland and back a few times so there are some cosmetic scratches and the sort but it's not horrible or anything. I used this radio on packet 9k6 and soldered a couple wires to the board for a direct connection to the discriminator audio out and a direct input. These wires escape through the bottom center screw hole and were connected to my TNC cable. I do not smoke so this unit is soot free. With a little TLC this could be a great 2mtr radio for someone or even makes a good scanner as is with aircraft recieve and vhf high band and the extended 70cm coverage that goes up to at least 470mhz. I'd fix it, but right now my funds as a poor university student are limited so it must leave my possesion.

I am asking $100 US FIRM .. (just think of it as helping me pay my tuition)
Buyer to pay exact shipping charges from zip code 44216. I'd like to ship USPS but other methods will be considered, and if you live in Northeast Ohio or w/in a 2 hrs drive of Akron, I'll deliver it to you if you'd like.

PLEASE contact me by phone only, as I don't read the email sent to this box, thanks to the plethora of junkmail hotmail provides.
(330) 882-4321
and ask for Mark N8TLV
I'm available evenings EDT but you can call anytime and leave a message.
Paypal is available, and preferred, but I'll take money order and personal cheques and will ship once they clear the bank.

73 and thanks,
Mark Saurman N8TLV

***I have been using the 940SAT for about 7 years. No complaints.
Great receiver. Excellent sensitivity and selectivity. I tried two
mikes; the Heil DX boom and the D104. Believe it or not the DX stations
said the 104 cut through the QRM much better than the Heil. I had
previously used the 104 with the TS830s and received the same reports.
Good Luck

My vote is for the FT-990...my only radio (and also bought "second-hand").

With P5 about to be credited to my total, that's 340 countries mixed RTTY (using FSK mode on the radio), CW and SSB....with the majority of them worked on the FT-990. I would say it works pretty well.

Your mileage may vary...but it is a great rig.

I never used a Paragon or '940.

I did, however, like my FT-990 very much, especially for the
flexibility on digital modes.

There are 2 rear panel jacks - RTTY, PACKET.

The RTTY jack allows FSK operation.

The PACKET jack allows AFSK operation whether for packet, Clover,
Pactor-II, or any of the many, many newer designer modes.

The mode selection on the front panel (RTTY, PKT) selects which
jack is used.

Also, installed filters may be selected as desired and used in
the digital modes.

Does anyone know the protocol that Yaesu uses in the FT1500M 2 meter rig to "clone" the memory from one rig to another (or to a PC)?

I've a lot of channels I'd like to program in, and I don't want to do it by hand. I can buy a program and cable to do this, but it would be more fun to write my own program.

Hello Rob,
Let's get to the bottom line in an answer to your question. Since you asked in the vein of operating modes / preferences I just want to say that realistically there is not going to be much difference in your ability to do successful RTTY, SSB and CW with either of those rigs. And furthermore IMHO - any - rig that is working properly will give about the same results the only assumption of course is that the rig has the mode in it that you want to use and compare to others.

A TS-430 is going to allow you to do those modes as well on-the-air as an FT-1000D overall and in 99% of the real-world situations. I have always felt there was far too much hoopla about rigs when basically any properly operating rig will more than "get the job done".

What does matter and what is meaningful and what does and can make an overwhelming difference in those modes you mentioned? 3 things...

1. operating skill
2. operating skill
3. operating skill

IMHO it is 90% operating skill and 10% equipment. Ask any QRP'er!!

Thanks to all for all the replies.

What are inserts? Never heard of them before.

Is there a way to find some place locally where I can
get the battery pack instead of having to go through mail
order? Will a Ni-Cd battery die off even if it hasn't been
used?

I too would go with the FT 990...much better reciever , in my opinion, though a 940 is might fine and less money.. could cost you on a repair though, lots of parts unavailable thru normal channels....Paragon loaded with filters and Giehl chip is pretty nice but I wouldnt trade a 990 for one...2 more cents worth...best deal on the planet right now woudl be a Yaesu FT 920 or an Icom 746, 920 should be 900bux the 746 not over a thousand....for the money Id rather have either of those...why not take adavantage of the new technology and low prices!! Less repair on newer rigs, 746 has been virtually trouble free after first runs and same for the 920...whoops I gave you 10cents worth..73 Murray

Of course one could always BUILD an AM transmitter for the aircraft
band, or perhaps convert a CB walki-talkie, but is it really practical?
And would you stake your life on such a "backup radio"?

They really do make Airband portables, even with other neat instrument
goodies built-in that are a whole lot cheaper than the cost of a new
airplane. They also make a great double check when things don't
look right.

620. Alinco DR-150 Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-18 04:29:20 UTC
From: "Brian C. Lane" <bcl@brianlane.com>
Message-ID: <FEFB95ADFC691B55.A05ADC773B951D50.94C73DA73A1787CD@lp.airnews.net>
Source record: 42231

I have an odd problem with my DR-150T and I'm not sure how to trouble shoot it. It transmits and receives just fine (monitored with my HT), but it has a hard time bringing up the local repeaters. My HT can bring them up, so I have the tones right and power isn't an issue. Sometimes it will work and most of the time it doesn't.

I suspect there is something going on with the PL tone, or tone level. But I have no idea how to trouble shoot it.

Any ideas?

Thanks,

Brian

Hi Arek, I have ic756 for about 4 years, I think FT-920 is a good buy, but ic756 is better!
of course few days ago we have tested an ic-746 and ft-920, for my ear is better the ic746 on the lowest signals, but there was mot so much difference.

You have another way: You can chose an oldest radio like ic-765, ts-940 for the same price.

Since you like the FT990 for digital modes, perhaps you can answer a
question.

My current-production KAM98 TNC ignores the RTTY and PACKET jacks on
my FT990 in favor of SPEAKER, MIC & PTT. Do I miss out on some
functionality because of this? Or, rather, do those data jacks
reflect how TNC's worked in 1995, which TNC's are now obsolete?

As to IF filtering, I have a complete set of three Inrads and find
they all can be engaged in almost every mode, especially CW and SSB.

For an NCL2000 amp, they are very small around, perhaps and inch in diameter and anything from 70-150 @450v+ would work, need 8 but they must be slim..they can be long.(4inchs or so)..anybody know what Im looking for? Thanks Murray K5MDM

I've used a TenTec Omni, a TS-930 and TS-850 during the past 17 years.
So far my favorite of those 3 is the 850 with 500 Hz filter.
(I mostly DX on CW).
Liked the feel of the tuning knob on the 930 best.

And the other three most important:

1. Practice.
2. Practice.
3. Practice.

Get to know your radio very very well :-)

To the point you don't think "push split, push a=b, push spot, find clear spot"
but instead think "look up 2 KHz for clear spot" and fingers automatically
make it happen without engaging brain ;-)

> IMHO it is 90% operating skill and 10% equipment. Ask any QRP'er!!

I came very close to picking up a 2nd 850 recently ... had trouble
turning it down for less than $600 ... keep in mind the earlier production
(very early production) had problems with components in the ALC chain.
Look for later serials, or proof the repair has already been done.

Hello Hank,
I agree 100%. I've had over 6 years to get comfortable with my
TS450S/AT and am so at home with it now there really is no operating
scenario that stifles me. As an example - numerous times when DX
stations have gone from simplex to spilt I have frequently been the
first station he worked after going split because it takes me about 2
seconds to switch the TS450

So..your advice of "practicing" is quite right and can be a real
advantage.....

636. FS: ICOM IC-T81A HANDHELD

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-18 23:14:12 UTC
From: "Robert G. Carter" <dc2light@radix.net>
Message-ID: <aeoer8gim1@news1.Radix.Net>
Source record: 42149
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

For Sale:

1 each ICOM IC-T81A 50/144/430/1200 MHz handheld FM transceiver and 1 each additional BP200 battery. Package contains original accessories i.e. factory rubber ducky, operators manual, wall charger and total of two BP200s, both with belt clips. The radio is only a few months old and excess to my needs. It is in like-new (9.9 out of 10) condition and works perfectly.
Material is located in St. Mary's County, Maryland.

Yours for only $255.00, pickup or shipped to your door (CONUS address) via Priority U.S. Mail.

Regards -

BOB CARTER W5BTC

Date: 2002-06-19 03:54:49 UTC
From: senecal@mapson.cs.ucdavis.edu
Message-ID: <senecal-1806022054490001@d71-096.solano1.ucdavis.edu>
Source record: 42160

Hi All,

I have a Quement SWB-3 Power/SWR Meter that I picked up from a friend. It has two meters, one on the left that says POWER, and one on the right that says SWR. In the center is a knob with a graduated scale going from 0 to 10, left to right.

What does this knob do? Can anyone give me some information on how I use it to get meaningful information from this device?

Thanks!

-Josh, KG6IBF

652. Icom 706mk2g separation cable problems?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-19 04:29:51 UTC
From: Richard Friedman <rchrd@rchrd.com>
Message-ID: <3D1008C1.29073D2@rchrd.com>
Source record: 42162

I've noticed that when I'm using the separation cable for
the IC 706iiG, with the control head mounted on the
dash of my van and the body on the floor between the
front seats, there is RF in the speaker of IC 706 when
I transmit. If I put the head back on the body there
is no distorted noise coming out of the speaker when
I transmit.

I've also noticed that sometimes, when I'm
stationary and I'm running off the extra utility battery
in the back of the van, the IC 706 will power off sometimes
when I key down. But rearranging the separation cable
(coiling it up, in fact) eliminates the problem. (Yes,
the SWR is under 1.5 and the battery is charged.)

Very strange things like this seem to happen when I use
the separation cable. In the usual configuration, as
I mentioned, the head is on the dash and the body maybe
only 3 feet away on the floor of the front seat.
This leaves about 6 or 7 feet of cable that I usually
coil up and tuck under a flap in the floor rug, near
the emergency brake.

I've also noticed that if I don't coil up the loose
cable I will pick up strange clicking noises that seem
to be coming from the radio itself. All this disappears
when I run with the head on.

I'd really like to know what's going on. Also, is there
something better than just coiling the cable up. Should
I add a ferrite bead or some other magic.

Anyone else noticed these problems?

I had a similar problem on my Ford Aerostar van. Yhe rear hatch
is made of a non-matallic composite materal and thr rear mounted
antenna radiates into the cab.

Ferrites helped a little.

You are bidding on ONE, NEW, ANTENEX brand, Phantom model, 3db gain, 806-866 MHz, "Transit" style, low visibility, 800 MHz Antenna. Antenex part number TRA8063. It is NEW in the bag. This antenna mounts to a standard MOTOROLA style mount (NOT INCLUDED IN THIS AUCTION). I have been using this style antenna for my personal equipment and I am very happy with the results. Great for low-profile or unmarked vehicles! Buyer to pay fixed shipping amount of $6.

Thanks for Looking!!!!

Rare Wanzer "Z-Match" antenna tuner. Top of the line model Z4M includes a relative fwd/ref output meter. Has a "in-out" switch, and a switch to change from a "PI" configuration to a "T" configuration. Utilizes 2 750pf heavy duty caps and a 28uh plated roller inductor with a turns counter. Covers 1.8 to 30 mhz. It is physically small 9x8x5, but advertisement states "will handle power far beyond legal limits". It is in exc condition with only a couple of small scratches on one of the side panels. Comes with paperwork.
$175 plus shipping
Thanks
Tim

The difference between the rigs (mark v and mark v field) is that the filed
is 100watts and it has a built-in power supply.
The field can run from ac or dc (13.8vdc).
The Transverter DOES work with the field; however, you need to buy the power
supply.
There were also some software updates made to the field ... which most
likely will also be found in the later mark v's...
hope this helps

663. FS: Ten Tec Triton IV 540

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-19 14:39:43 UTC
From: NZ8J <timcook@erinet.com>
Message-ID: <3d109754$0$1432$4c5ecdc7@news.erinet.com>
Source record: 42173
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I have a Triton 540 for sale, it is about a 7 to 8 in appearance, and works 100% (most of the time) It has a problem in that from time to time the audio will have what sounds like static, or "popping" "crackling" sounds. the receive sigs are still there, but the noise is about the same level. It will stop with a "POP" and is quiet again. It's hard to explain the symptoms, but it sounds like maybe a cap is breaking down or something like that. I took the IF-AGC board out and reheated some of the joints and it seemed to fix the problem for several days, but it is starting to do it again. Also, I am running it from a 12 vdc battery and not a 13.8 vdc supply. I don't know if the slightly lower voltage is a contributing factor or not. The PTO has been rebuilt and is smooth. has a new dial cord. Includes the optional CW filter and noise blanker. I have the original manual, complete, but the pages are loose. It puts out full power andI believe it has all the 10 meter xtals. Has the power cord that will connect to a standard non ten tec supply and has a relay wired in line so that the front panel on-off switch will work with any supply. I will sell it as-is and ship and insure it in the lower 48 for $140.00. Please email with any questions. I can send a pic of it for those who are interested.

thanks
Tim

When you check SWR..you have the meter in the FWD(forward) position, then while transmitting, you set the meter to the set mark. After that you switch to the reflected position to read the SWR. Thats it, if the meter is what I think it is, by your description.

I have 5 maxtrac or radius radio for sale for $550 or trade the lot for an ft-817 of ft-100 or some other HF radio that has 6 meter also.

1st of the radios is a radius UHF 25 watts with 16 pin on back ,has mics.
2nd of the radios is a maxtrac 300 VHF 40-50 watts with 5 pin on back, has mic.
3rd of radios is a maxtrac 300 VHF 25 watts with 5 pin on back, has mic.
4th of radios is radius UHF 25 watts with 16 pin on back, has mic.
5th of radios is maxtrac vhf 40-50 watts with 16 pin on back. this one has a mic but the mic has been split in 1/2 along the seam will need to be glued back together.

All the above radios where pulled working. they have been sitting on shelf for a while. they com with out power cords and mounting hardware. I have check them and they all power up. I did not transmit on them due to no antenna. I am selling them as is.

I thought I was going to make a repeater out of this radios. But now want to upgrade to general and do HF.

Thanks for looking

Brian,

Do you have a wattmeter? Check to see what your actual power output is. The meter that is on the radio itself does not show actual power output; it just gives an indication of which power setting you are on. Another way to check is with an Ammeter. See if you are drawing 8-10 amps on high power transmit. If it's drawing only an amp, then it is pretty safe to say that the Toshiba S-AV17 vhf rf power ampifier module has gone in it. I heard that this part costs $60, but can't confirm that. Also heard that popping the cover off of the amp module and repairing burnt traces would fix it, too. Personally, I'm trying to sell mine. I don't have the time nor money to fix it. From what I was reading online, this happens a lot to these power amp modules, calling it a "disease".

Hope this helps some.

Hello,

I just bought a Standard HX240U UHF radio and wish to
field program it to the FRS band. I can get the Xmitter frequencies correct
but
the radio will not receive on the specified frequencies. I read an article
on this
radio that states the receive frequency must programmed 23.15 Mhz than what
you
actually want to receive. Is this true? Has anybody played with this style
of radio before?
TIA.

Nope, it isn't a power problem. I checked the SWR today and its putting out power just fine. I have used this radio as an APRS unit for a few months, and I can also use it on one of the local repeaters with no tone it just fine. It also sounds good on the HT, so it isn't a distortion problem.

It does seem to work once if I leave it off and don't change channels after turning it on. So I'm assuming its the CTCSS module that's gone flakey. I will probably just keep using it for APRS I guess.

Thanks,

Brian

Oops, I mixed up a few words.
What I meant to say is , does thia radio have to be programmed 23.15 Mhz
higher than what RX frequency you actually wish to receive?
BTW, the radio is a model HX240U(AC)

Serverman

You're kidding? No. I don't screw the cable connector into the
radio because I'm regularly taking the radio out of the van and into
the house, with the head back on the main chassis.

Do you mean that there's some extra grounding or something when the
connector is screwed in?

Sounds bizarre. But worth a try.

Message-ID: <h5cQ8.6606$Fv1.678749@newsread2.prod.itd.earthlink.net>
Source record: 42191

I have for sale an ICOM IC-756 (160m-6m 100W) and an ICOM SP-21 External Speaker. The radio is an 8.5 on appearance and a 10 in operation. The 756 has the FL-222 and FL-223 filters installed. The speaker is a 10 all around! I purchased another HF rig which replaced the 756. I accept cashier's check or a money order. $1,100.00 plus shipping. E-mail to: karpower@earthlink.net

Thanks

I have a BRAND NEW AMD K6-2 500mhz CPU with cooling fan that I would like to sell or trade. I bought this CPU and fan to replace one that I thought was shot in my old computer and it turned out to be the motherboard. Instead of replacing the motherboard, I completely upgraded. This CPU was mearly put into the computer and then taken out so it's got next to no usage and is in perfect shape.

Best offer or willing to trade for ham equipment. If you have anything you'd like to trade, or are willing to buy the CPU and fan, email me directly.

I heard something about this the other day on another NG. There is
supposed to be a tiny grounding screw on the cable to faceplate
connector. "I think thats where it is anyway"..It might be from the
rig to cable connector...
Make sure that is tight.
>

That would seem to indicate a loose ground on that cable.. You are
picking up the internal radio racket from the cpu, etc. About like
listening to it with no antenna.
>
> I'd really like to know what's going on. Also, is there
> something better than just coiling the cable up. Should
> I add a ferrite bead or some other magic.

I'd start by grounding the radio itself to the body. Then make sure
the connector ground screw is tight. Make sure the power wiring is

thick enough. I've seen too thin a wire make 706's act funny due to
the excessive voltage drop.
>
> Anyone else noticed these problems?

I've got a 706g, but I don't have the cable yet. So have yet to try it
myself.
I have had "rf" in the rig problems once, but it was from using junky
temporary wiring. When I rewired with thick stuff, the problem went
away. I was having the "rf" problems on 20-17 meters. I'd hear myself
in the speaker. Also make sure the ground at the base of your antenna
is real good. Body to frame, etc. MK

Once again I am considering setting up a ham station and thought I would ask other posters what they considered the best value in used HF gear. My prior rig was a Kenwood TS-450sat (wish I still had it) and I thought it was the most perfect ham radio I've owned in 40 years. I don't want to pump a lot of $$ into this because I seem to be in some sort of mid-life thing and I'm not sure how serious I really am, so, what do others feel is the best value in a used HF rig (Icom, Kenwood,etc..Models?)? Please consider final cost, features and availability of repair service. Thanks!

Jim,

I think you have answered your own question. Kenwood 440's, 450's, Yaesu FT900's, Or the Icom 706 series all make excellent setups. And the Icom and Yaesu you can go mobile with. The Alinco DX70TH is another good base/mobile choice.

700. Newprogram - feedline radiation

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-20 21:34:49 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <aethpo$5mi$4@paris.btinternet.com>
Source record: 42110

New Program FEEDPOWR.exe

RADIATION FROM BRAID OF COAXIAL FEEDLINE.

Radiation due to unbalanced feedline currents is often considered undesirable.
It may sometimes be thought useful. The main effect is distortion of the radia-
tion pattern. Power loss in a wanted direction can occur - but how unfortunate
is it? Signals or noise from an unwanted direction can be a nuisance - but how
much of a nuisance? An estimate of the strength of feedline radiation before
taking precautions seems desirable. Precautions might not be necessary

A crude estimate will be sufficient because much of a feedline''s length runs in
a cluttered, uncertain environment. This program models and analyses the most
simple and worst-case situation - a dipole centre-fed via a coaxial line.

An RF source is placed at the centre of a horizontal dipole of given length and
height. Also from one side of the source a 3rd conductor descends to ground
level where it is grounded via a loss resistor. This 3rd conductor corresponds
to the braid of the coaxial feedline from the antenna back to the transmitter.

The 3 radiation resistances are computed. Then input Z of each of the 3 conduc-
tors followed by the 3 input currents. Finally the percentage of radiated power
contributed by each of the 3 conductors is calculated.

A balanced-to-unbalanced transformer (balun) at the antenna end of the line can
constrain the currents in the conductors to be equal and opposite to each other.
Line radiation is then reduced to a low level and the radiation pattern remains
undistorted. This program does not allow for currents being re-introduced in the
line due to the line not being led away from the antenna at a 90 degree angle.

The need for a balun with a simple dipole is much debated amongst radio
hams.
Attention is focussed on feedline radiation and on a line''s receiving
ability.
But with only anecdotal evidence offered by participants debates inevitably
fail
to arrive at any conclusions.

In the absence of numerical information on the subject this program attempts
to
fill the gap. There is only one quantity of consequence - the fraction of
total
power which is due to unbalanced feedline current. It depends only on
antenna
dimensions and frequency. That radiation emanates from any particular part
of a
structure is a popular misconception but in this case the myth serves a
useful
purpose. The analysis involves some simplifying assumptions justifiable on
the
grounds that the uncertainties introduced are probably no greater than the
un-
certainties associated with details omitted from the input data.

As will be seen, radiation from a coaxial feedline in a particular
installation
can vary widely with frequency. Random resonances occur. If by some chance
one
occurs in an amateur band it can be shifted by changing the feedline length.

701. Re: Nulling an MFJ phone patch

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-20 22:00:16 UTC
From: "Bob M." <xxxxx@yyyy.zzz>
Message-ID: <QfsQ8.309448$%y.25135933@bin4.nnrp.aus1.giganews.com>
Source record: 42111

I have an old Heathkit hybrid phone patch. As I recall, the whole idea of nulling is to reduce or eliminate your received signal from getting into your transmitter when there's a caller on the phone line circuit. You need to actually set up a phone call and provide a source of receive audio that you can then meter or listen to on the transmit wires. The Heathkit unit had a switch position that put a VU meter across the transmit line, and one adjusted the null for minimal movement. I'm not familiar with the MFJ unit but my guess is that it works similarly. The null just balances out the hybrid transformer circuit which gives you a transmit and receive signal to/from the phone line. You want to end up with incoming phone audio going just to the transmitter, and outgoing receiver audio just going to the phone line.

Hope this helps.

> Computer Control?

Yes, it has the capability, but I don't think
the software or cable is available yet.

>
> Can the preprogrammed memories (Marine Band) be scanned?

No. And the only way to switch between marine frequencies
is to spin the channel selector knob. There's no way to enter
a channel number. There are a lot of channels and switching
can require a lot of spinning. But the marine frequencies can
be scanned using the normal scanning method, i.e. enter a start
frequency and then start scanning.

450Sat is still one of the better radios in the $600 range, but little more gets you a lot lot more...take IC 746 and 756'....they are floating around from $900 to 1100 and are lots more, but if you wanta spend 700 or less...a 450sat and power supply would not be a bad choice...many options, to many to mention....but c'mon back!! 73 Murray

706. DC Power Connections?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-21 00:33:49 UTC
From: ve3tmt <ve3tmt@rac.ca>
Message-ID: <owuQ8.4351$Rf7.1491002@news20.bellglobal.com>
Source record: 42117

Can anyone tell me if the DC power connections on the Kenwood TS440 and the
Yaesu FT900 are the same?
Just curious whether I need to rewire my power plug.

707. Yaesu VX-7R computer interface testing

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-21 01:20:45 UTC
From: n1kk@netzero.net
Message-ID: <d7adbb57.0206201720.51a24887@posting.google.com>
Source record: 42118

I tried a 3/32 stereo plug connected to the smaller
of the 2 connectors of the CT-91 and with an O-scope
I can see a burst of data when the VX-7R is in the
CLONE mode and I press the BAND button to send data.
This is using the GND and the middle position of the 3/32 plug.

I then connected this to a home made RS232--TTL interface I use
for my ICOM radios and using Hyperterm I can see a few character
get displayed when pushing the BAND button for send.
I get characters at 9600 and 4800 baud. I did not try
other baud rates.

I hope this helps anyone with software writing skills.

Ken

Jim,

You did not specify your primary mode of operation. But, do not overlook the Ten Tec Corsair 2. It is available for less than your $700 target and is still an outstanding performer. In fact, the Ten Tec factory frequently advertises Corsairs that they have taken on trade. You have the advantage of getting a used rig that has been serviced and brought up to factory specs by the experts.

Good Luck,

Don - K2PMC

Bob...thanks for the info....that's what I wasn't sure of.....whether I should null the person's voice coming *in* on my phone by watching the VU meter, or whether I was supposed to null the voice of the person coming from the radio. So, what you're saying is to have the phone-side person speak (while transmitting) and null that? I called MFJ but the guy there didn't know the answer either! haha

Hi everyone interested into the Palomar PTR-130k..
I,m the happy owner of 5 complete radios plus one incomplete... and
the best thing is I do have most of the technical infos including the
diagrams.. these diagrams are "blue prints" with about 4 by 3 feet in
size (120 x 90 cm)!!
I would like to complete the 6th unit as well but for that one I need
several parts... so if someone in the group has a scrapped unit I
would like to email thisone... I will make the diagrams sometimes
available as a pdf file.. before I can do this I have to find a way to
scan them... because of the size it,s difficult, but I will find a way
to make it... I own these radios since 3 month.. the design is very
interesting... mainly for the digital part... the digital part is weak
part and most of the malfunctions are in the digital part.. in the
analog part they had used the famous Plessey IC,s... so the analog
part is still today an outstanding design... the receiver is excellent
and so is the modulator for SSB, too... the use of a RF-Clipper is
very effective and the best thing you have only 4 knobs in total plus
the keyboard to work with this fine radio... so let me know your ideas
to conserve this fine
product (and a very rare one) for the future. On eham.net I, have
written an info under reviews.

Well, even if it isn't equipment per se, it's at least ham related.

In 1996, the Yeasu hats at Dayton said "40th Anniversary Since 1956".
By the time my XYL (KA5DYF) figured out that she and Yeasu were both
founded in the same year, I had managed to get a stain on my hat.
Ever since then I've been getting a lot of verbal abuse about getting
"her" hat dirty.

In a feeble (futile?) attempt to restore domestic tranquility, I'd
like to find her a 1996 hat in good shape for her very own. Does
anyone out there have a hat in good shape that they'd be willing to
part with for a reasonable fee?

(You can be sure she's going to the 2006 hamvention.)
Thanks,
Ed - N5KZW

Ed, might I suggest you trade the XYL in for a 1976 model and then pick up
the Alinco 40th anniversary hat in 2006 :-)

727. HELP - TS-711A Jumper Cables

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-21 23:31:02 UTC
From: windbrkr@Zerols.com
Message-ID: <MPG.177d814371f66af1989986@news.erols.com>
Source record: 42138

A blind Ham acquaintance of mine has a Kenwood TS-711A rig that he wants to install a VS-1 voice synthesizer and a TU-5 tone encoder board into.

Whoever had the 711A before him did not include the jumper cables for these two accessories with the rig. My understanding is that the cables come with the rig, and not with the accessory boards. Kenwood has not been able to help on this one.

Can anyone here describe the pin outs and connector types of the cables required to install the VS-1 and TU-5 into the 711A?

I haven't yet seen the rig or the accessory boards, but it sounds as though they both have male pins, requiring female sockets of some sort on both ends of the cables. It also sounds as though at least two cables, maybe more, are required to complete the hookup.

Any help will be much appreciated!

73, Bob K9CMR

I think Bob has it correct but you misinterpret what he is saying. With your phone call in place and no one speaking on the phone, you null the audio from your receiver. The goal is, as Bob said, to minimize the amount of receiver audio getting to the transmitter input so that it doesn't trip the VOX. If you are not using VOX then it is not necessary to perform the null.

The bridge circuit that does the null includes the impedance of the phone line and that is why it is necessary to do the null with the call in place (but no one speaking on the phone). The null adjustment may change with different calls.

Bob....thanks for the clarification....I had no idea the null was only to prevent receiver audio from getting into the transmitter and tripping the VOX......and since I don't use VOX, I don't need to worry about it anymore. :-)

Thanks,
David

Hi !

Firstly I want to apologize about my very poor english. I'm not english-spoken guy.

I've got handy Standard HX500 Series transceiver made for marine VHF frequencies. Inside I found some push-in crystals and trimers. Right now this trx works on marine channels 6, 16, 18, 19 and 65. Thats all about 156 MHz.

How to change the crystals to receive/transmit on 2 m amateur band ? Where I can find parts to do it ?

greetings

Jarek, member of SP2ZIE

747. FS: Kenwood TMV7-A and Comet GP-9 antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-22 17:23:43 UTC
From: bearcat51@yahoo.com
Message-ID: <9014cad1.0206220923.4aa0934@posting.google.com>
Source record: 42058

I have the following two items for sale:

1) Kenwood TMV7-A mobile dualband radio in *MINT* condition-less than
15 mins
total use on the radio. All accessories included. Everything works
perfectly, transmit, receive, display, etc! This radio looks brand
new, no scratches at all on the unit itself or on the display face! If
you want info on the radio, here is a link to Kenwood's web site:
http://www.kenwood.net/products/index.cfm?AMA=open&ama_mob=open&radio=TM-V7A&selection=Ama
teur&ID=25

Kenwood has a suggested retail price of $449.95 and most retailers
sell it for a little less than Kenwood's suggested price but I am
asking $350.

2) Coment GP-9 dualband base station antenna. This antenna has *NEVER*
been used, still in the box. Here are some specs from Comet's web
site:
http://www.cometantenna.com/base.html

Asking $150 for the antenna. Brand new it goes for $165, I believe, at
R&L Electronics. Here is an opportunity to get a brand new, never used
antenna for less than R&L and/or other retailers.

All prices above INCLUDE S/H via UPS ground and insurance to anywhere
in the
continental U.S. If interested in any of the two items or if you have
questions, please email me at bearcat51@yahoo.com. Thanks!

Reason for selling the items is I have lost interest in radios.

748. FS ALINCO DX-70TH, 100 WATT ALL MODE HF+6

Newsgroup: rec.radio.amateur.equipment

>corner of the board close to connector J15.

Thanks Bill, I did find it. Looks like I'll have to take it apart a little more to change it. Couldn't see but it seems to be soldered in on the other side of the board which apparently is covered by another board. I measured the voltage and it was .02 mV...supposed to be three volts if I understand it correctly.

'Nother question; Even with a bad battery shouldn't it maintain its memory if it's hooked up to a power supply?

Thanx!
Duane

Hello to the group:
I was wondering if anyone has the restringing diagram for the
TenTec Model 243 Remote VFO. This goes with their Omni Series
Transceivers. I have one I received from my fatherinlaw and the cord is
broken. It is all there but he removed it for some reason, put it in an
emvelope and never redid it. I know Ten Tec has one they sell? with the
restringing kit, but I have everything now and just have to redo it all.

Tks 73, Jack N9JB

I have a Wagner PS-100C Power Supply and I'm looking for a schematic for the regulator & overload protection module (PS-100R).

Although I can trace the parts happily, a few components are rather crispy and I need the schematic so I can determine what part is what!

Any assistance would be greatly appreciated.

Cheers

73

763. Help with TS440

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-23 06:19:28 UTC
From: ve3tmt <ve3tmt@rac.ca>
Message-ID: <vMdR8.6349$Rf7.2148047@news20.bellglobal.com>
Source record: 42074

Having acquired a TS440 in a trade only to find it unlocks between 10.5 - 14.5 Mhz. Have replaced diodes as per service notes, still no luck. I am getting voltages on 2 separate points in the bandpass section when there should only be one. Diodes have been changed there. When I unplug the B0,B1,B2,B3 (binary signals) cable from the RF unit (coming from the control board) the display comes back up, I get transmit power, with tuner functions but no receive. I am also not getting the proper VCO voltage range for that specific frequency range. I can get the maximum voltage specified (5.2-6.2V @ 7.5000 MHz) but when it hits the 10.5 Mhz mark this voltage drops suddenly from 4.3V to 2.14V and stays there during the rest of the frequency spread. It is supposed to gradually drop from the upper voltage down to 2.5V as you tune up from 7.500 - 14.4999 Mhz. All the VCO's had been tuned as per manual.

Please help, I don't know hwta to try next

Max ve3tmt@rac.ca

764. Broke TS440 up for trade/offers

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-23 07:59:32 UTC
From: ve3tmt <ve3tmt@rac.ca>
Message-ID: <defR8.10$%N4.2992@news20.bellglobal.com>
Source record: 42075

I recently trade my Yaesu FT900 for a TS440S to match my VHF station. Here is what the trader had to say after he received the Yaesu:

VE3TMT Traded his FT-900 for My Kenwood TS-440SAT. Deal went slicker than Chicken Grease through a Coon Dawg. The Rig he traded was understated. Max my
Hats off to you. you are a Fantastic Ham.Look forward to QSO's on 20 meters. Hope you enjoy the 440 as much as I did restoring it.

73 de KD5JBN
Glenn

What did I end up with? A TS440 that won't transmit on 20m. The rig cuts out from 10.5 - 14.5 Mhz. Apparently this is a common problem with these rigs, but I was told it was 100% when he shipped it. It worked at my QTH less than 12 hrs before it died. He is telling me to file a claim with UPS. Like that will help. And how many weeks would I be without HF capability? All I know is when my FT900 left here it was in excellent shape, and from what I gather his wife is enjoying it immensely. And I'm stuck with a piece of crap 440. All I can run here at this qth is low power modes (like 20m PSK) and now I can't even do that.

I hope you enjoy the FT900 Glenn, I know I did.

P.S. If anyone wants a 440 to try and fix, make me a fair offer. I would rather get rid of the damn thing than have it sitting here on my desk reminding me of what I gave up for it.

765. PRM8030 modem board pinout

Too many Bobs on here these days !

Yup, that's what I think I meant. And if you aren't using VOX, it probably isn't important, but it only takes a few seconds and then you could use VOX if you were making a phone patch for another ham and didn't have to handle the PTT function.

Where did you get that figure from? Their 28-222MHz unit is
$395 assembled or $295 in kit form, and it is an excellent
performer with 25W RF out and a quiet GaAsFET front end.

Murray:

This is worth a try:

From Window's Explorer or "My Computer", click on "View"

Then click on "Folder Options"

Then click on the "View" tab

You will see a "Hidden File" options list. Highlight "Show All Files"
(especially if "Do Not Show Hidden Files" is highlighted.)

Then hit OK.

If this doesn't work, perhaps someone else will have a suggestion.

Roger K6XQ

Murray
Could you have opened your email up under a different username
than you normally use?

Or maybe logged in to Windows 98 under a different user name?

787. TS440 update...

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-23 17:59:33 UTC
From: ve3tmt <ve3tmt@rac.ca>
Message-ID: <L0oR8.1388$%N4.104999@news20.bellglobal.com>
Source record: 41998

I started measured from the Digital unit (binary counts for each band) and they are right (0 1 1 1 for the 10.5 - 14.5 segment) . Test freq = 14.200 AM mode. These signals travel to Q40 pins 12 - 15. However I get the opposite readings at Q40, meaning the pins high are now reading low and low reading high. Q42 and Q43 I assume control the filter switching. I am not getting the proper readings on Q42. If I temporarily switch in Q43 by shorting pins 9 & 10 together on Q40 my 14 Mhz receive and transmit return to normal. The display shows as it should. So I now I may have found the problem, any guys out there with a 440 service manual that can trace along with me and possibly lead me to the defective component. I am as close as I have ever been to solving it.

Thanks,

Max

>$395 assembled or $295 in kit form, and it is an excellent
>performer with 25W RF out and a quiet GaAsFET front end.

I saw it someplace on their website.. quoted a $900 price tag for it. Still,
$300 or $400 is a bit high for me. Any chance Ten Tec will come out with one?
:)

789. Need 32S-3 help

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-23 19:53:45 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <uhc9qgl2kcnk7f@corp.supernews.com>
Source record: 42000

Help: my Collins 32S-3 has a problem with the balanced modulator. The carrier can be nulled out but the adjustments seem to drift and the carrier level increases to un-acceptable levels, USB or LSB.
My book is a reprint and does not match the mixer circuitry in my transmitter. Shucks. Seems there were several flavors of the circuitry around the balanced modulator.

For the heck of it, the mixer diodes in my TX were discrete glass things so I tried replacing them with HP hot carrier types. The carrier nulls better (almost perfectly!) with the HP diodes, but still drifts up in level.
Anyone have a proper schematic for 32S-3 serial numbers in the 11600 range they could have a look at and maybe scan the modulator portion of the drawing?
Thanks
Bob

I tried the site and it comes up in English for me. Not sure if it is the site or the documment you are talking about. I have downloaded several other manuals for the rigs I have and they are all in English.

The 508 is about 700 K long and is in a PDF format . I can download it and send it to you if you want.

The AOL email address is not compatiable with my internet provider so am trying to send a response back to this one.

Dean

GE Portables

GE MPA VHF Scan 136 - 150.8 split 192 channels nice 9.0
Condition. With battery and charger. I have this programmed for
Ham and up to 152 MHz before it will not lock on frequency.
$225.00

GE MPA VHF Scan 157 - 174 split. 192 channels. Nice radio 8.5
condition with battery and standard charger. I have it programmed
down to 154 MHz with no trouble but will go no lower. $225.00

GE MPA UHF Scan 440 - 470 192 channel scan. Radio works great. A
little paint wear on the edges but I have seen worse. With charger
and battery. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.
With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These
look good and come with a battery and standard charger. $100.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha
display. With battery and standard charger. $115.00

GE KPC 300 VHF 16 channel scan. Nice radio with battery and
antenna. No charger with this one. $100.00

GE KPC 400 UHF 16 channel scan. Full DTMF pad on this radio.
This one has a charger. $195.00

GE PCS VHF 2 channel. Like new 9.5-10 condition. 150 -170 MHz.
With battery, antenna, leather case, and pocket charger. $100.00
each. 2 available.

SALE!!
GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170
but I have programmed these in the ham band with no trouble. These
have battery, antenna, and standard charger. $75.00 each Programming
Included. I have 7 of these.

Sale!!
GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can program these to the ham band. With battery, Antenna, and Charger. $90.00 each. Programming included. Have 3 of these.

GE MPS VHF Like new 12 channel. With new battery, new antenna, and a standard charger. $70.00

GE MPS VHF 12 channel. 8.5 condition. New antennas and NOS batteries Standard charger. $60.00 each have 2.

GE MPS UHF 48 channel. 8 = 8.5 condition, These have NOS batteries And have 4 banks of 12 channels. These can go to the ham band. I have been Using one of these on my ham repeater and it works great. $70.00 each I have 8 of these.

GE UHF MPS 8 channel with 8 different tones. 8 different tones can be Selected for each different channel. Battery and antenna. $60.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1 good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I sold this radio a year ago but have taken it on trade. Condition 8 with belt clip and charger. I had this radio run for stolen from CSX by a local CSX Special Agent when I first bought these in a lot and was told that it had been sold at salvage. Perfect for a RR Museum or shortline on a budget. This could also be programmed for marine frequencies. Like new tall Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms. $100.00

GE MVS 800 conventional 2 channel. With mic tested OK $75.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240 450. - 470 Looks good. $125.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00 each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Just in not tested. $70.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger. 16 channel model has short cable and some handle bar mounts. Mic included but no speaker. Not tested yet since I just got it in.

$50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit charges your battery and turns your portable into a mobile radio. (Convert a Com) With mic, speaker, and power cable. $100.00

GE Accessories

GE TQ 2310 suitcase programmer. Has PLS, Phoenix, Delta s/sx, Voice Guard, MPS, and Ranger. Printer is working Has manual for the programmer and the computer. Has Phoenix cable and Voice guard cable. All in the original GE case tested and working. $850.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00

Other Radios and Accessories

ADI AT 201. 2 meter portable nice like new and in the box with the manual. Has 5 watt battery and wall charger. $90.00

Yaesu ft 2400 2 meter mobile. Has Mounting Bracket and manual. Nice 2 meter Radio. $125.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great. This was in my van before I added another MVS so I know it works. $100.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery charger but I will split up the pair if someone wants 1 radio only. 6 channels programmed for 10 meter ham band on 2 repeater pair and 4 simplex frequencies. 2 radios and 1 charger $185.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $75.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Uniden SMS 825 TS, 800 MHz Dash mount radio. $55.00

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

MOTOROLA X9000 VHF 50 watts, alphanumeric head, Siren complete. $425.00

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola P200 UHF high power. 6 channel. $150.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS
Extra parts for GE suitcase programmers Data modules, Printers, cables,
proms, Anything you have extra. MPA or MPD portables what do you have and what do you want for them? Johnson scorpion program cable.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. 796. FS: Pentium Laptop Computer.....$50.00

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-23 22:31:53 UTC
From: "RoyaltyFreePhotos.com" <rffimages@yahoo.com>
Message-ID: <3D164C59.8093E545@yahoo.com>
Source record: 42007

I have an extra Pentium Laptop for sale. Please look at the pictures.
The specs are as follows:

NEC Versa 2730
Pentium processor
32MB RAM
12.1" Color LCD display
3 1/2" floppy
CD ROM drive
Sound card with speakers
Modem
'touch-pad' type mouse
USB port

This is a very nice computer.

Click on these links to see pictures:
photo 1: http://imagehost.epier.com/11449/versa-1.jpg
photo 2: http://imagehost.epier.com/11449/versa-3.jpg
Photo 3: http://imagehost.epier.com/11449/versa-2.jpg

Power requirements are 19vdc at 2.4A. I have lost the regular AC power
adapter and new ones are quite expensive because of the weird plug that
NEC used on this model. However, I just use 2 slip-on connectors and
connect it to a regular DC power supply. The pin-out for the connector
is a simple 2 wire connection.

I believe the battery is good, but I can't guarantee it.

The Price is $50.00.

UPS ground shipping in the 48 states is about $17.50.

If you are interested please contact me at:
wae@zworg.com
or call me at 303-674-0510.
I am located in Denver.

Thanks,
Bill

798. SSB Filter for Kenwood 570 DG

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-24 00:12:18 UTC
From: John Lynch <wa3g@arrl.net>
Message-ID: <3D1663E0.235D711@arrl.net>
Source record: 42009

I have had the 570 since August 1998, and love it. Only problem is QRM which the IF shift and DSP can not wipe out, the big gun 2 khz away. What has been anyone's experience with the 1.8 khz filter Kenwood has. Is it worth the money? How effective is it?

800. Help with Icom AH-4 to IC-706

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-24 01:42:40 UTC
From: Jon Van Allen <jonvanallen@msn.com>
Message-ID: <3D167910.21079159@msn.com>
Source record: 42011

I bought a IC-706 and AH-4 auto-tuner. While installing it in my vehicle, I took the pins out of the plug from the tuner to the radio so I could fit the cable thru an existing hole. I wrote down which color wire went to which pin, but now I can't find the paper I wrote them on. If anyone could tell me the order of the wires from the pointed end to the flat end, I would be grateful.

I have a for sale the following,

1 TR 8400 UHF Mobile Rig I believe its 25 watts out. Comes with kenwood hand mic, and com spec tone board. And a power cord. Its in good condition. 100.00 Plus a little shipping.

1 HTX242 2 Meter mobile 50 watts, 40memories, DTMF and all the other usual toys you need on a mobile. Comes with hand mic, powercord, mobile bracket. In excellent condition. 100.00 Plus ship.

Hf amplifier made my N6ZU running 2 4-400A tubes (emiacs) Full output. This is a world class built amp with vacume variable, tuned inputs 10-80Meters. Peter Dahl transformer in the same box. Nice rear hinged box too. Have pics if you would like to see. Beats a commercial made amp any day. Will throw in another emiac pair of 4-400As full out. Make me a offer. I paid 900.00 2 years ago. Totally quit ham radio a few months ago. Weight is 75 pounds.

Cross-posted to: alt.ham-radio.packet,free.uk.amateur-radio,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.shortwave,uk.radio.amateur

A friend who doesn't have access to newsgroups asked me to post this message for him. Please forgive me if I've posted to this group in error.

Concerning the ICOM IC-751 Transceiver, my friend asks:

"...In that radio is a ram-board that contains the operating system for the radio and that's where memory channels are stored. I need the hex code for that radio. I believe the board has a total of 1024 bytes of memory. I think the first 256 bytes is for the operating system and the remainder is for user memory storage. I need the first 256 bytes.... maybe you can put this request on the news groups and some Ham out there might have the code and can send it to me at W2RB@JUNO.COM..... it would be greatly appreciated... tnx.."

If someone can help him, you can email him directly, or email me and I'll get it to him.

Thanks.

John

806. FS ICOM 271A 2 meter all mode with tone board.

> less than 12 hrs before it died.

Yes this is a common problem with these rigs. The main PLL was
potted in a rubber compound. If the rig was kept in a dry area, it will
work indefinately. Once exposed to humidity the rubber compound sucks
water out of the air and starts to conduct electricity which causes the
PLL to unlock.

So it is very possible the guy who sold it to you had no trouble with
the rig, and when you received it it worked. 12 hours seems like a short
time to me, but it is possible that was all it took.

Therefore in effect, he sold you a working rig, and you unkowningly
caused it to malfunction. I don't think the problem can be reversed, but
it can be repaired. Kenwood has a service bulletin on fixing the rig and
you may be able to fix it yourself.

In short, you remove the soldered on lids of the PLL compartments,
and carefully pick out the rubber compound. A professional repair
goes further, replacing a few parts and repoting with nonconductive
material.

Geoff.

It actually used a NEC uPD444 which is 1024 x 4, so 512 bytes.

>> I think the first 256 bytes is for the operating system and
>> the remainder is for user memory storage. I need the first
>> 256 bytes....

A couple years back I replaced the backup battery in my 751A, so
my radio is still alive. At the time I saw a couple replacement
boards that were available but never saw the memory image posted.

With a search today, I found this site.
http://www.geocities.com/emailsrikanth/ham/icomram/RAM.html

It looks like this has the information you are looking for.
Specifically, the file 745_751.zip.

Now I am prepared for a future radio disaster too.

Source record: 42035

Can anyone tell me if I could use a D-104 with an FT-100D? I was thinking of buying a "Heil Sound" AD-100-8 adapter (as seen at http://www.heilsound.com/AD-1.htm) and wiring up a plug on the D-104 in the standard Yaesu 8 pin configuration. I asked the manufacturer of the adapter and they stated that they don't know if it will work.

What address book? What software was it part of? Netscape? Are you
actually using Netscape for email, or is this some other kind of
address book?

I use Netscape, too, but I use Forte Agent to read newsgroups and
Pegasus Mail for email. I STRONGLY recommend both of these over
Netscape for their intended purposes. Netscape is not bad as a
brouser, but it does poorly at these other functions. I think that
just comes from trying to be all things to all people.

Try Agent and Pegasus. They can both be gotten for free and they work
really well.

833. FT 530 CTCSS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-25 04:13:18 UTC
From: fire06475@firehousemail.com
Message-ID: <8375ed8a.0206242013.42a28fdc@posting.google.com>
Source record: 42044

The ctcss on my FT530 has started doing strange things. I normally listen to frequencies using 141.3, 179.9 and 107.2Hz tones. The only way I can hear these frequencies now is to turn off the ctcss or set it to 100.0 Hz. Any suggestions?

Thanks,

Ross

834. Help !!! Standard HX 500: how to change the working freq ?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-25 06:02:58 UTC
From: Jarek <powolniak1@wp.pl>
Message-ID: <af913b$82t$1@news.tpi.pl>
Source record: 42045

Hi !

Firstly I want to apologize about my very poor english. I'm not english-spoken guy.

I've got handy Standard HX500 Series transceiver made for marine VHF frequencies. Inside I found some push-in crystals and trimers. Right now this trx works on marine channels 6, 16, 18, 19 and 65. Thats all about 156 MHz.

How to change the crystals to receive/transmit on 2 m amateur band ? Where I can find parts to do it ?

greetings

Jarek, member of SP2ZIE

You might want to try doing a full CPU reset. I know its a pain re-programming those freqs again, (especially on an HT with no computer control capability), but it might just do the trick.

Chris

Andy,

I removed the element and amp from my D104 and put a Heil HC5 element in it.
The guys in town tell me it is the most true to life audio they have heard.
And it pumps out more than enough for 2m SSB and my HF activities with no
amp needed.

Max

>The guys in town tell me it is the most true to life audio they have heard.
>And it pumps out more than enough for 2m SSB and my HF activities with no
>amp needed.

But is that really needed? I'd like to use what I already have instead of replacing things.. from what I've read there's a sub-menu that you can access on the FT-100D that allows you to change a lot of settings... perhaps there's some sort of setting I'd have to change to make it so the D-104 sounds better without switching out the element? I suppose I could always just go ahead and hook it up when I get the 100D and see how it works.. I've also found that Yaesu makes an adapter to go from the modular plug to a standard 8 pin plug for around the same price as the other one.

New program PADMATCH.exe

For given source and load resistances this program designs T, Pi and L resistive matching pads and attenuators. It has the same facilities as program MatchPad (which it replaces) but with an extra facility to insert preferred-value resistors from the various standard tolerance ranges. The design procedure is used in reverse to predict the in-circuit attenuation (dB).

First calculate the ideal resistor values of a network. Then replace them one-by-one with the nearest preferred values and the changed attenuation will be automatically calculated.

Download program PADMATCH from website below.

850. Dentron GLA-1000B amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-25 20:43:07 UTC
From: WZ1U <Wz1u@attbi.com>
Message-ID: <88lhhu4qdofdi3j2d64gig7aqt8ve5b84m@4ax.com>
Source record: 41961

I have for sale in excellent condition a Dentron GLA-1000B amplifier. It covers 80 to 10 meters and I have the 10 meter mod to get on 10 meters which has not been done. This amplifier is rated for 800W CW and 1200 Watts (PEP SSB). The final tubes are (4) 6LQ6 and produce about 550 watts out. I would rated this a 9 out of 10 and is in excellent working condition. I do have the original box and original manual. I will take $350 plus shipping in the 48 states only. If you have any questions email or call (508) 821-2993....WZ1U Steve / Lakeville, Ma.

851. FS: Dentron GLT-1000 antenna tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-25 20:45:18 UTC
From: WZ1U <Wz1u@attbi.com>
Message-ID: <r9lhhu4fpvs35nq87k9oapn1puaftef4r5@4ax.com>
Source record: 41962

I have for sale a Dentron GLT-1000 antenna tuner which handles and matches the Dentron GLA-1000B series. It has a directional wattmeter, 4:1 balun, switching is provided for 5 seperate loads and a seperate bypass switch. The circuitry used in the GLT-1000 is a "T" network, consisting of an input and output series air variable capacitor and a tapped toridal inductor, using a double thickness T-225B core. It covers 1.8 to 30Mhz range and its rated for 1200 P.E.P input to the final state. I would rate it a 9.5 out of 10 and its in excellent condition with the original manual and the original box. There is no marks, scratches, dents and its from a non-smoker. This particular tuner is getting hard to find and I will sell it for $150 plus shipping in the 48 states only. If you have any questions, you can email or call (508) 821-2993.....WZ1U Steve / Lakeville, Mass.

I did a similar thing on a '97 Grand Voyager. The radio (a Yaesu FT8100R)
is hanging from the ashtray, antenna and power wires pass through that
same rubber plug near the gas pedal mentioned above. In my case, I pushed
all the wires through the central hole (push hard!). The coax runs up
to the near-left lip of the hood, where the antenna mount emerges from
the slight gap there.

You might want to twist the power leads together for as long as possible.
I had considerable engine noise in my radio until I twisted. No noise now!

Bob, KI8AB

Yup. Always fuse both the hot (positive) and ground (negative) wires
from the radio to the battery, as close to the battery as is practical.

>You might want to twist the power leads together for as long as possible.
>I had considerable engine noise in my radio until I twisted. No noise now!

Some years ago I ran across a supply of an exotic cable, probably made
for some aerospace or mil-spec project. Four conductors (14 gauge),
twisted together, with a braided shield and an outer insulating
jacket. I used a length of this for my radio power cable (two
conductors for each polarity), grounded the shield near the radio, and
heatshrink-isolated the shield at the battery end. No engine noise at
all.

I'm looking to hook up my HP 200 LX into a PSK31 station with a PCMCIA soundcard, a rigblaster or equal, and then my ICOM 706. This will be a very small mobile PSK31 station. Has anyone tried this?? If so, some questions:

What software did you try and what were the results??
What PCMCIA Sound Card did you try and what were the results??
Any suggestions??

I know the HP 200 LX is a great little packet computer but, I want to try and go for something a little more useful.

Any help is greatly appreciated.

What is the best handheld scanner?
ICOM IC-R10 or YAESU VR-500, without considering the king of the hand scanners the AOR AR8200 (but with the problems of short autonomy of his batteries and his expensive price).

I want to scanner all mode (AM, N/FM, SSB & CW), handheld, that cover frequencies between 0,5 MHz and 1300 MHz minimum, and that has a good selectivity and sensitivity, these two models that I expose are the firm candidates, and only models that sell where I live (I do not want to buy at distance, by the problems of repairs while this in guarantee, either to buy used scanners, unless one says to me that the ICOM IC-R10 and the YAESU VR-500 aren't a good election).

Thanks,

Trondheim

I don't know much about scanners but this got
crossposted to a group I read and I'm perplexed.

If I set up a scanner to scan from 0.5 Mhz upwards
stopping on each AM, FM, SSB and CW signal for long
enough for me to decide if I am interested or not....

On what date does it reach 1300MHz?

nigelH

870. mfj1276 help

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-26 11:49:54 UTC
From: REMOVETHISvk2gjt@winnet.com.au
Message-ID: <3d19aa4d.1163006@news.ozemail.com.au>
Source record: 41981

Hello all,

I have a MFJ-1276 Packet/Pactor tnc, with a bit of a problem. I cannot get the unit to go into pactor mode. I have followed the advice in the handbook (typing in Pactor then enter) but the unit appears not to recognise the command.

I have checked all the jumpers as per the handbook, and all appear in the right position. All the IC's in the device appeared properly seated and in the right slots.

The main system chip has release 2.2 $70c written on it, and the board appears common to the 1270/1274/1276 by the printing on it.

Does anyone have any information on this?? Is it possible that the main system chip (U23) that was supplied was one only for maybe the 1270, as the unit performs perfectly in packet.

Looking forward to any replies or assistance with this at all.

Thanks,

Gregory Towells vk2gjt

No, not yet anyway. I'd seen that; it apparently expands the transmit range. I might do it; it doesn't look too difficult. Apparently, once you get the cover off, you just apply a little heat and pop two diodes off the board, then reassemble and off you go. The real bear seemed to be the home-brewed PC cable. Don't know if I have the patience for that. I was referring to unblocking the cellular range. The Canadian radio isn't blocked, and I was thinking that, if one could obtain schematics for the US and Canadian radios, whatever was different probably had to do with blocking the cellular range.

From: Francesco Messineo <frank@ares.ccii.unipi.it>
Message-ID: <afcjq2mmk1@serra.unipi.it>
Source record: 41989

Hello all,
I acquired a second hand FT-102 rig, it was modified to go in the 6.5-7.0 MHz band and to the 11 meters band :(
I'd like to have copies of the part of the FT-102 technical supplement that describes these modifications in order to revert the mods and bring back the rig on its original bands, I already have manuals and schematics.
The modifications should be describe in pages 17 to 26 of the technical supplement.

Thank you in advance and best regards.

Having owned the aor 8000, 8200, yupi 9000 and the alinco dj-x2000 I
give the nudge to the alinco. the radio has many usefull features
that are not included or cost extra on the other radios. Having built
in record function for 2.5 minutes if useful, speech descrambler, ctss
decode, 2000 channels, exellent bank breakdown (40 channels per),
excellent construction, computer control, the list goes on. Only weak
spot is scan sped is slow but this is remedied by grouping
frequencies ie, 450 mhz in one bank, 150 in another, etc... or at
least keep them consecutive within the same bank. The scanner slows
when moving from one frequency range to another. Keith

If you use it for Ham use, the IC-R10 IMHO. Why?

After all, the 8200 has a far better SSB filter (the R10 & VR500 use their 6kHz AM filters for SSB so they're not that good on a busy band).

So as the 8200 has a half decent SSB filter (still not that good), why do I prefer the R10? One reason. The tuning control.

The 8200 has a useless tuning mechanism with a thumbwheel rather than a proper tuning knob. Not having a tuning knob in the conventional sense renders this radio useless for Ham use. Somebody better tell AOR that you need a tuning knob on a radio.

The IC-R10 & 8200 come with rechargeables and recharger in the UK but the VR-500 doesn't.

The computer interface on the R10 utilises the standard ICOM CIV interface so not only is it fully featured but there's lots of software that will work for it.

The 8200 has a fairly good computer interface too.

The VR500's computer interface is only there for cloning and programming the memories. No 'real time' mode like the 8200 & R10 have.

The VR500 is smaller than the R10 which is, in turn, smaller than the 8200.

The user interface of both the 8200 and the VR500 leave me very confused.

The 8200 has a better stock antenna as it is a telescopic whip. The other two have rubber ducks. The 8200 also comes with a small ferrite coil antenna which, unless you already have a decent antenna, is essential if you want to have chance at picking up anything below about 14MHz.

I noticed lots of internally generated microcontroller hash on the 8200 (mark 2 version) I've owned.

Compared to other vendors, AOR should be congratulated on their web product support for all their products.

At one time or another over the past three years I've used all these radios fairly intensively. I purchased the R10 first. And it's still the R10 that I prefer, and is the only one I still own and use regularly.

I have an "FCC Type Accepted" SGC-2000 Marine/Ham SSB. What makes this radio "Type Accepted" for HF Ham bands and why is the IC-706MK2G not Type accepted on marine frequencies?
Background: The SGC-2000 is a terrible radio. I would like to replace it with the Icom 706, however, I need to have access to the marine frequencies so I can communicate with non-Ham marine stations. Can I do both with the 706 and stay strictly legal? It would be best for me, financially, to buy one radio to do both marine and ham.

>I have an "FCC Type Accepted" SGC-2000 Marine/Ham SSB. What makes this radio"Type Accepted" for HF Ham bands and why is the IC-706MK2G not Type accepted on marine frequencies?.."

The "Type Acceptace" of the SGC is just for the Marine Bands. That was a marine Band radio, also usable/modifyable for Amateur bands below 30Mhz. Amateur radios that only operate below 30Mhz don't require "type acceptance", that is why many Marine, Cb & other rigs are routinely modified for Amateur bands, & it's also the "loophole" that allows the thousands of "40 channel" style 10M rigs to be imported every year.
As far as I am aware, the FCC hasn't allowed Amateur radios to be "out of the box" type accepted for other dual services such as Marine, commercial, CB or aircraft bands , even though many will "mod" there...

I run a yaesu ft-50. It's a great little dualband, prices have dropped considerably, and it's also got some mars/caps+ mods available via software etc...
It's only two bands, but honestly where I'm at, 5 watts of 6 meter ht is going to be useless, and 1.2ghz or 220 are even more scarce.
It's a great radio for a HT.

Obviuosly, it is "type accepted" for the marine band, not the ham band. The "type acceptance" has nothing to do with the ham band - covered by another set of rules and a license.

It is not legal to modify a ham radio to operate in the marine bands. Radios in those bands must be "type accepted" for that use and the Icom is not. However, the Icom can probably be easily modified to operate on those frequencies if you have a ligitimate reason to do so. As a member of the CG Auxiliary, I use my Yaesu on the marine band, and on the military frequencies next to the marine band, strictly for activities associated with the Auxiliary. For private radio use, I use a marine "type accepted" radio.

just when you think you have heard it all on this topic, people amaze you. by God, that is what keeps me getting out of bed each day.

if it makes you feel better, your right steve. exactly. send them all to the firing squads. bastards modifying ham gear for use on 11 meters. no matter what country. shame shame. in fact, let's call the netherlands and give them the guys name. yeah, get him locked up for good. my money says you would get laughed off the phone.

this is like the neat idea of holding gun makers liable for murders commited by someone using a gun made by them. let's pass right over the fact that someone, a person, chose to commit the crime. oh no, let's put it off on the person who made the gun. that makes us feel all better.

what a crock. if the fcc is so tired of people using 11 meters illegally, why don't they do something about it? we have put a man on the moon, have satelites that can see a person on the ground and tell what he or she is wearing, why can't we stop people from using 11 meters? i'll tell you why. because the goverment has better stuff to spend you money on than chasing that crowd. if they really wanted to stop it, they would. just like if they really wanted to stop drugs, and i mean really, humanity would go out the window. just like the germans, God love them. there are no rules in the red light district. anything goes. however, pull some of that "anything goes" stuff outside the red light district and you'll get a real ass beating and a ride to jail. point being, they have stopped that activity in the general community. go against the rules and there is a heavy price to pay.

if a fool wants to pay the money for a radio like that just to use on 11 meters, let them. good for the guy selling it. and i would say, "if you use this on 11 meters, you go to jail."

you can't save people from themselves.

Somewhere, but unfortunately I can't find it now, there is a web site
which lists ham transceivers which can be legally used on U.S.
Government systems. IIRC it was primarily aimed at military, reserve and
National Guard users and the main requirement was the addition of a high
stability master oscillator - I assume a similar requirement exists for
commercial services like marine and aviation. Maybe someone can point
you to the site and you can check if the 706 is on the list.

I second the FT-50. AES has them now for 209 dollars, and it is a sweet little radio. Aside from the other features, it has one that is kind of not mentioned too often. Even though it is small, it is relatively thick, which is actually an advantage for a person like myself with big paws.

Get the 706, use it on whatever frequency you want to, nobody knows,
nobody cares. When was the last time you actually heard of someone,
anyone, getting charged with using a non type accepted radio for any
purpose? Just doesn't happen. There is a hell of a lot more people
using ham equipment on CB than the marine bands. Few, if any, people
get arrested for doing that, and the pool is a lot larger. If anyone
asks you what kind of radio you are using, tell them you are using the
piece of crap SGC. How are they to know that is not true?
Reminds me of hearing stories of calling the fire department to get a
cat out of a tree. When was the last time you saw a cat skeleton in a
tree? They come down when hungry, and they don't need the FD to do so.

This is the second of two (2) of these I found on the shelf in an old electronics supply house. This one was, in fact, still sealed in the unopened box, but some fool scrawled "transistor checker" on one side, so I had to open it to make sure what was inside -- what a Catch-22!

This transistorized Jackson Electrical Instruments Company Model 562 Code Oscillator and Monitor apparently dates back to the early '60's (before zip codes).

Thanks for looking,
Tom

The MSR has similar receiver as the Mitrek mobile. They apparently have a problem with "metallic hairs" growing inside the preselector casting. Try retuning the preselector or opening it up to blow out any foreign material.

Ken, check out the slugs in the multiplier string. They seem to become
a bit noisy in time. Have had several of the MSR's with that trouble.
Best cure has been to use some graphite grease on the slug itself.
Works for me anyhow.

That label indicates that the equipment has undergone extensive
testing by the FCC and approved for a specific use.

Only commercial equipment (including CB radios, etc.) must be type
accepted.

Amateur radio equipment does not need to be type accepted.

We would like to take this chance to give you a brief of our company.
We are manufacturer of Power Metallized Film Capacitors.

Our Capacitors are nearly 100% worldwide exported. Mainly to Italy,
Germany, USA, Canada, Australia, Japan, Thailand and Malaysia.

In these two years, the pressure for cost reduction is increasingly.
Purchase from Hong Kong is one of the solutions that balance the cost
reduction need and quality consideration. Hoping that we can
co-operate in this way.

Wide variety product range including :
High Voltage Film Capacitor : 0.01u - 2uf up to 15000Vac
High Voltage Filter Capacitor
Power Film Capacitor
Power Resistor Capacitor Network
Resistor Capacitor Varistor Network (Snubber Network)
Three Phase Capacitor - Stella and Delta
Lighting Capacitor
Pulse Capacitor
Snubber Capacitor Module

OEM and tailor-made Design are welcome.

Should you have any inquiries, please do not hesitate to contact us.
Quotation and samples will be sent upon request. Thanks for your kind
attention and look forward to hearing from you soon.

Best Regards,
Goman Siu

> Lt., USCG Aux. Ret.
> Comm Officer

Jim, you're showing your considerable ignorance of the Auxiliary. First of all, there are no retired Auxiliary lieutenants, or any other similar rank. We're a civilian organization, created by Congress, and controlled by the Coast Guard Commandant (similar to the Civil Air Patrol's association with the Air Force).

Second, there are no Comm Officers in the Auxiliary. We either serve watches at Coast Guard communications facilities, or operate from our homes using privately own equipment to supplement Coast Guard communications, or operate from out vessels using privately own equipment during CG related activities.

Third, there are no COs in the Auxiliary. We have a command structure similar to the military, but different in many ways.

Fourth, the FCC has no authority over Auxiliary communications on the military frequencies (the Coast Guard controls its own frequencies), so there will not be any knock on my front door.

And, finally, if I were doing anything illegally, do you really think I would write about it in this, or any other, newsgroup.

read between the lines. i was being a smart ass. "waste" would have
probably been a better choice of word.

>:-) ROTFL. Where do you live, on Cosby Show?
>
nope, florida. i'm sure the Cosby show would be much better.

obviously you missed the point of the reply. i have been reading posts
written by hams on this topic for years. and for the life of me, i can't see
why people would spend SO much time and energy on this. we have rules and a
governing body that is supposed to enforce the rules. i don't like people using
100 watts on 11 meter sideband either, but it is the lesser of two evils. at
least that keeps them off of the cw portion of 10 meters. most of the time :-)

my opinion, your milage may vary.

Source record: 41938

Dwight Stewart <stewart@sc.rr.com>
shared these priceless pearls of wisdom:

-> Jim, you're showing your considerable ignorance of the Auxiliary.

You are correct. I was only doing search and rescue duty for an AuxCoastie Flotilla for 15 years. Perhaps you've got time and rank on me. I listen for your august words of advice.

->First of all, there are no retired Auxiliary lieutenants, or any other
->similar rank.

You are correct. I was a lieutenant (railroad tracks with a superimposed red "A", still gottem in my top bureau drawer) when I moved out of San Diego and had to resign. I'll use "former" instead of "retired" in my next post.

We're a civilian organization, created by Congress, and
->controlled by the Coast Guard Commandant (similar to the Civil Air
->Patrol's association with the Air Force).

Exactly so. However, within a given flotilla, at least in the Air Search And Rescue group, all pilots were given the butterbars rank of Ensign upon joining and then we progressed with time and duty experience. We had a complete command structure from the Flotilla Commander (4 year term, rank Cdr. as I recall) through ExO, TO, CO, and all the rest of it.

->
-> Second, there are no Comm Officers in the Auxiliary.

I only taught it for the last 5 years I was in. I set up the airborne communications net for the patrol of the waters from San Diego to Newport. I guess I must have been dreaming it.

We either serve
->watches at Coast Guard communications facilities, or operate from our
->homes using privately own equipment to supplement Coast Guard
->communications, or operate from out vessels using privately own
->equipment during CG related activities.

The stuff I had to work with had an anchor on it. I guess I was dreaming that, too. So also the portable stations we set up for the weekend stinkpot patrol on Soledad and Palomar.

->
-> Third, there are no COs in the Auxiliary. We have a command structure
->similar to the military, but different in many ways.

Oh, boy, do YOU have a lot to learn. Just because you little backwater flotilla is set up the way you understand it, don't tell the rest of the world that we are doing it wrong.

->
-> Fourth, the FCC has no authority over Auxiliary communications on the
->military frequencies (the Coast Guard controls its own frequencies), so
->there will not be any knock on my front door.

In the first place, you said you were using your Yaesu on the marine band. The USCG does NOT have standing to use the marine band except under the rules set down by the FCC, which requires type-accepted equipment. In the second place, at least in the Southern California jurisdiction, any equipment used on the military frequencies had to be individually approved by (guess who) the Communications Officer of the flotilla or the region.

->
-> And, finally, if I were doing anything illegally, do you really think
->I would write about it in this, or any other, newsgroup.

I have no idea of your mental capacity.

Thanks to all who responded! There are lots of very good rigs to be had for under $700, it's just a matter of finding one you like. As I said in my original post, I really liked my old Kenwood 450sat. Well, I managed to find another in as good if not better shape for a killer price (local ham), so I bought it. Back on the air again! Thanks.

Auxiliary personnel wear insignia similar to military rank, but those are symbols of office or position held, not rank. In fact, the Auxiliary rules specifically prohibit any misrepresentation of rank or authority (Auxiliary Manual, pg 3-8, E3f). The two full bars with red "A" shows an appointment to a staff officer position either at the district level (ADSO or D-AD) or national level (BA, if worn with corresponding National Staff ID badge).

> the rest of it.

How long ago was this? Are you sure you're talking about the Auxiliary and not the active duty Coast Guard? I've been with the Auxiliary for almost fifteen years and am not aware of any of the things you mentioned. No Auxiliary member has been given military rank that I'm aware of. Personnel are given authority commonly associated with rank while engaged in certain situations for the Coast Guard, but that always ends when the situation ends (it is not permanent rank held).

Flotilla Commanders serve for a period of one year with a maximum of two consecutive terms followed by one year out of office (no limit on number of times repeated). I verified that using COMDTINST M16790.IE. A Flotilla Commander wears two bars with a silver "A" (the silver "A" represents an elected position versus the red "A" for appointed positions).

There are no ExO, TO, or CO, positions (see more below).

> I only taught it for the last 5 years I was in.
> I set up the airborne communications net for
> the patrol of the waters from San Diego to Newport.
> I guess I must have been dreaming it.

Jim, you must be thinking about the active duty Coast Guard instead of the civilian Auxiliary. There is a huge difference between the two. We, the Auxiliary, have a specialty course, called AUXCOM, that is based on Coast Guard communications training, but it is different in a number of ways (procedures, frequencies, etc). Of course, since we are able to serve watches at Coast Guard stations, that course must also contain proper Coast Guard procedure in addition to the slight variations associated with Auxiliary communications. The course is most often self taught (though some flotillas offer training classes), with a proctored final exam given by an active duty officer (commissioned or petty) or an AUXOP specifically appointed by the director.

> The stuff I had to work with had an anchor on it.
> I guess I was dreaming that, too. So also the
> portable stations we set up for the weekend stinkpot
> patrol on Soledad and Palomar.

I'm not suggesting that you're dreaming about anything, Jim. Only that one of us is somewhat confused about Auxiliary procedure and organization.

> > Third, there are no COs in the Auxiliary. We
> > have a command structure similar to the military,

>
> Oh, boy, do YOU have a lot to learn. Just because
> you little backwater flotilla is set up the way you
> understand it, don't tell the rest of the world that
> we are doing it wrong.

Jim, I'm basing my comments on the national Auxiliary manual (COMDTINST M16790.IE) and on my experience all the way through to the national level of the Auxiliary. The Auxiliary's "chain of leadership" is very different than the military's "chain of command." There are no Commanding Officers ("COs") in the Auxiliary. The closest thing to that is the active duty command structure when serving directly with the Coast Guard on patrols or at a fixed facility. However, the Auxiliary itself has no "command" structure, hence there cannot possibly be a "commanding officer" within the Auxiliary.

> In the first place, you said you were using your
> Yaesu on the marine band. The USCG does NOT have
> standing to use the marine band except under the
> rules set down by the FCC, which requires type-
> accepted equipment. (snip)

Jim, none of the Coast Guard's radio equipment is "type accepted" by the FCC. With activities directly associated with the Coast Guard, Auxiliary personnel fall under military regulations (just like the Coast

Guard does), not FCC regulations. And it is up to each Coast Guard district to regulate communications within that district. In District 13, the use of ham equipment by Auxiliary personnel is authorized, or at least it was when I was there (the Group Operations Center's Communications Officer in District 13 was an active ham, so he should have known what the rules were or are if he is still there). I'm not aware of the regulations here since I'm not directly involved with communications except for the very occasional patrol (my boat is not a facility here, so is not used for Coast Guard patrols here).

> In the second place, at least in the Southern
> California jurisdiction, any equipment used on
> the military frequencies had to be individually
> approved by (guess who) the Communications Officer
> of the flotilla or the region.

All that is covered in the basic Auxiliary manual. Auxiliary communications equipment used for Coast Guard communications must be inspected and approved before it is accepted as a facility, and that inspection is one by staff officers at the flotilla, division, or district level. That is nationwide policy, not just limited to Southern California.

Wellllll, looking at my AES catalog, HF marine radios run about $1250 to $1900.
You can get a new 706 for $800-ish. It would seem you could get, say, the
Kenwood HF marine at $1250, and a 706mk2g, for about the same as your SGC cost,
or a little more.

You could also go to a VHF marine radio, and save a bundle over the HF jobs.
They're only a couple of hundred bucks.

Hi all...

I'm trying to find the original radios and antenna
for my airplane (an Aeronca L3B "Grasshopper")...

The specific equipment I need is:

RCA AVT-112 Transmitter control unit
RCA AVT-15A Transmitter
RCA AVR-20 Receiver
RCA AVA-120 Trailing wire antenna
RCA AVA-126 Power supply
AG-40 Wind generator

The equipment in question might not have actually been manufactured
by RCA... I know that at least some of them were manufactured
by Continental Radio & Television Corp...

Any help would be appreciated

Check out www.thiecom.de for online sales. Site is mainly in German
language. Prices 20-30% less than UK. I'm not connected, just a satisfied
customer. I just bought a Yupi 7100 from them for 314 euros including
delivery to Ireland - I think that's a pretty good deal.
One snag - they dont take credit cards outside Germany - u can order online
but u need to pay by post or cash on delivery.

Hello, I am having problems with a DX-70T from Alinco that I own. This problem is in regards to not having audio output while having a continuous blinkiing problem that consists of about 2 or 3 blinks per second. This condition persists despite my attempts to reset the rig back to factory defaults and to elminate the memories programmed in. The rest of the LCD is lighted as usual and every other button works on the rig. However, I am not getting any audio from the rig while the squelch is totally off which should result in some audio. Also, the frequency is constantly blinking during this time and does not stop even once for regular operation. Wondering if anyone knows what this problem is and if there is anything I can do to the rig to fix it. Thanks for your assistance.

955. ? about CATV Hardline

Newsgroup: rec.radio.amateur.equipment

I have almost a full roll of CATV Hardline. I was thinking of replacing my old coax with this if it can be used. This is the info thats on the roll.
Times Fiber Communication,Inc
Reel No. C86
Type: T650
Footage: 2000

It looks to be 3/4 in dia. and the outer jacket is aluminum with copper-clad aluminum inner conductor .
I hate not to us this if it can be put to good Amateur use. Have any of you used this stuff before ?

That's 70 Ohm, but will work. The slight impedance mismatch, won't really hurt, because theres very little loss.

The 706 series can not be " Type Accepted " for the Marine Radio Service. It does not meet the technical standards set forth in Part 80 to end rules which the Marine radio service falls under. You will find most if not all amateur HF and VHF transceivers do not meet Part 80 to end technical standards. Much is due to VFO control where Marine equipment is channelized. There is no slipping up ro down a few kiz to get rid of interference under the Marine Rules like we can as amateurs.

The problem is not in the majority of CB-ers who, I assume, adhere to their license restrictions. The problem is in the few who abuse their licenses by operating outside of the band, which means operating in the middle of our 10 m band and lately even the 12 m!
Allowing imports of CB rigs with extended frequency coverage is a big mistake. All I am trying to say is that we hams do not have to add to that mistake by selling our own all HF coverage transceivers to CB-ers and potential CB-ers.

> ... for the life of me, i can't see
> why people would spend SO much time and energy on this. we have rules and a

Keyword is "supposed". Cases like Flippo are an exception, rather than the rule.

I couldn't care less how many megawatts they use on 27 MHz, but once they have access to anything above 28.000 and below 24.990 that's when it becomes my concern.

Dwight Stewart <stewart@sc.rr.com>
shared these priceless pearls of wisdom:

-
->
-> Auxiliary personnel wear insignia similar to military rank, but those
->are symbols of office or position held, not rank.

I'm not going to debate semantics between postion held (which implies some sort of authority) and rank. Perhaps the purists will want a distinction.

->
-> How long ago was this?

1967 through 1981.

Are you sure you're talking about the Auxiliary
->and not the active duty Coast Guard?

Oh, sure, I have no idea whether I was flying my own aircraft on search and rescue on the weekends or being paid a salary to wear a brown suit every day for four years. Come on.

I've been with the Auxiliary for
->almost fifteen years and am not aware of any of the things you
->mentioned.

Things may have changed in the ensuing 20 years. That doesn't make them any less real when they happened.

->aware of. Personnel are given authority commonly associated with rank
->while engaged in certain situations for the Coast Guard, but that always
->ends when the situation ends (it is not permanent rank held).

So we have authority associated with rank, temporary rank, and permanent rank. If it walk like a duck, quacks like a duck...

->
-> Flotilla Commanders serve for a period of one year with a maximum of
->two consecutive terms followed by one year out of office

It was either a two or three year term, and as I recall (never having held the post myself) it was butterleaf with a red superimposed "A".

-> There are no ExO, TO, or CO, positions (see more below).

Having served for two one-year stints as the ExO and five years as the CO, I respectfully disagree.

-> Jim, you must be thinking about the active duty Coast Guard instead of
->the civilian Auxiliary. There is a huge difference between the two.

No kidding. Who the hell you think you are talking to here, sonny? You think a 15 year chunk of my volunteer life just vanishes?

We,
->the Auxiliary,

That's the royal imperative We, of course. You'd do well on the Queen's staff.

>> have a specialty course, called AUXCOM,

Our Air Flotilla had no formal procedure as we were (to the best of my knowledge) either the only, or one of the very few, aircraft-only flotillas in the country. We were writing the manual as we went. My job was to travel around Southern California teaching the methods and procedures for communications between the Auxiliary water fleet and the Auxiliary air fleet. Beings as that most communications of the day (early '70s) was still with radios that glowed in the dark, that was a nontrivial task.

->
-> I'm not suggesting that you're dreaming about anything, Jim. Only that
->one of us is somewhat confused about Auxiliary procedure and organization.

Boy, ain't THAT the truth of it.

->
-> Jim, I'm basing my comments on the national Auxiliary manual
->(COMDTINST M16790.IE) and on my experience all the way through to the
->national level of the Auxiliary. The Auxiliary's "chain of leadership"
->is very different than the military's "chain of command." There are no
->Commanding Officers ("COs") in the Auxiliary.

Here we go again with semantics. All I can tell you was that back in the stone ages the leader of a flotilla was called the Commanding Officer. What you do today may be different.

->
-> Jim, none of the Coast Guard's radio equipment is "type accepted" by
->the FCC.

I'm not willing to fly 600 miles back and pull a radio out of the rack to prove or disprove that contention. However, I will state that somewhere in the process, the company that designed that radio got some form of FCC acceptance/approval, whether or not it went through CGHQ and thence to the FCC, or directly from the manufacturer.

In District
->13, the use of ham equipment by Auxiliary personnel is authorized, or at
->least it was when I was there (the Group Operations Center's
->Communications Officer in District 13 was an active ham, so he should
->have known what the rules were or are if he is still there).

I doubt sincerely that any competent engineer or technical person would give blanket approval for ANY ham gear to be used on the marine band without SOME sort of testing stamp on the back plate. Either that or a list of acceptable models that had gone through some sort of evaluation.

Auxiliary
->communications equipment used for Coast Guard communications must be
->inspected and approved before it is accepted as a facility, and that
->inspection is one by staff officers at the flotilla, division, or
->district level.

And we wouldn't call that flotilla staff officer that inspects the communications gear the...Communications Officer...would we? Heaven forfend.

All I ever use is CATV cable for every antenna I put up. Yes is it 75 ohms but really not a problem with Ham 50 ohms antenna or radios. Gilbert Engineering in Phx., AZ makes connectors for all CATV cable and has for years give them a call if you need connectors or usually you can made N or UHF work with a little engineering. .

I have a non working Alinco DJ120 HT. Comes with Nicad Battery. The retaining clip that holds the battery is broken. And the radio is DOA. I do not have the antenna or charger. Comes with operation manual. This radio does have Alinco PL deck set via the DIP switches on the back.

$30 shipped free in the CONUS

Reg --

It isn't a matter of "signing the papers". Lord don't I wish it so. I've been the signatory engineer on about two dozen TAs, and each one of them has been like pulling teeth back in Washington. (FCC Laurel Labs, specifically.) The tests aren't too bad (about a week for a typical VHF transceiver, by the time you set the antenna pattern range up, get the generator running again, and all that stuff), but the interminable wait from the Laurel Puzzle Palace is a royal pain in the labonza.

(Thanks for your help on understanding the rough theory behind a thin tape antenna's bandwidth, btw.)

I know nothing about the auxiliary but having spent over 30 years working for the U.S. Government, I can tell you that in that time no Federal agency has to go through or get approval from the FCC. The Federal Government falls under the authority of the National Telecommunications and Information Administration (NTIA), a part of the Dept of Commerce. NTIA assigns the frequencies and sets the standards for the Federal Government in the same manner that the FCC does for everyone else in the U.S.

No mods. Just been sitting in a box after being bought brand new a couple of years ago. Just the plain stock radio sitting in a box in the closet with no dust, environmental problems or anything else.
I was trying to turn it on and listen on 40 meters but just keeps on blinking on frequency display.

Look at the NC Total Electronics paint selection

Mike Shelton has a number of paint colors

http://www.nctotalelectronics.com/

HALLICRAFTERS PAINTS
#301(*) Do not touch up. Paint entire top of panel. Due to age, quality
control and silver paints previously used.
#302 HT Gray (*) This is the lighter gray. Some HT-32&'S, 37'S have a darker
gray. While ours is the correct gray, it may not match your particular
model.
Hallicrafters had quite a variation of this gray over the years. As compared
from
the field, we took the best of the best and matched it. Ours matches the
majority.

Thanks for the info. I found that it was loose like you said it was! I pushed back down on the removeable plug and back into the faceplate so it ended up working like you said. You were correct sir. I believe I owe you a big juicy steak dinner!!! Thanks again!!

> of authority) and rank. Perhaps the purists
> will want a distinction.

It's not just a matter of semantics, Jim. It is against Coast Guard regulations to misrepresentation of rank or authority. While we are strongly associated with the Coast Guard, and wear insignia very similar to the military rank of officers, we are not commissioned officers and therefore cannot just assume military rank or titles.

By the way, this topic was hotly debated within the Auxiliary recently. Many pointed out that the present system (titles associated with position held) does not serve well for written correspondence or for past officers not presently holding office (hence, no present position title). Most agreed that if military sounding titles are adopted, they should clearly different - such as "Auxiliary Captain" instead of just "Captain." However, no consensus of opinion was reached, so no action is planned relating to this.

> 1967 through 1981.

Well, after reading your messages, all I can say is that things have sure changed in a short amount of time. You would hardly recognize the Auxiliary today. Our status, missions, and roles were dramatically expanded following two bills passed by Congress in the 1990's (1994 & 1996). Today, the relationship between the Auxiliary and regular Coast Guard is getting much tighter. Auxiliary personnel today can do just about anything active duty Coasties do (except direct law enforcement and direct military actions, but even those restrictions are less today). Some Coast Guard jobs have been turned over entirely to the Auxiliary. The 9-11 tragedy caused still further changes, offering Auxiliary personnel more duties and responsibilities (to free up active duty personnel for homeland defense activities). Membership at the entrance level is now much easier (everyone is invited to join), while membership at the more senior levels is more restrictive (background checks and security clearances are now required for most senior positions, for example).

You should think about joining again, Jim. You might like the Auxiliary today. Anyway, take care.

If you take the top to the local Home Depot
they may be able to scan the color and mix you
a can of near-matching paint. They have a new
machine that scans the color of an original
then computes what mix of pigments to use
to duplicate the same. One other caution, it is
very possible that the paint used on your
Hallicrafters is lead based. You may want to
take precautions if you were to remove the
old paint from breathing in the dust etc...

Ends 1823 Zulu - 11:23 A.M. PDT - Saturday

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1361880243

From an estate, this Multi-Elmac transmitter was apparently partially
disassembled with the intention of restoring it.

The face plate and front panel is quite good, it appears to have fresh
hammertone paint.

Thanks for looking,
Tom

Thank you very much my friend, it's true, in www.thiecom.de, the YUPITERU MVT-7100 is cheaper than other sites, 298 ? without delivery.

I have found another site more cheap, in an Australian store: http://e5.eon.net.au/E5.cgi?ST=syncro&CMD=Category&Category=Scanners&Company=Yupiteru
282,15 ? (without delivery), but I prefer to buy it here in Europe, so possibly I buy it in www.thiecom.de, for only 16 ? plus ;-)

I do not have sure is if the repairs within the guarantee period, can be also carried out in our own country, having bought scanner in Germany.

Many Thanks,

Trondheim

You are probably best off looking for some old beginners radio books or old copies of PW, these would have simple circuit diagrams for the beginner. But then you will have to built a HT supply for the valve(s) - about 90v as you cannot buy the batteries anymore

Some years ago (35-ish?) I used to look at such books in my local
library but I was too young to afford to buy the parts, or understand
the construction principles. Now I have the money (and let's hope the
brains) the books are no longer on the shelves. If you can supply
titles that'll give me something to approach the library assistants
with.

GE Portables

GE MPA VHF Scan 136 - 150.8 split 192 channels nice 9.0 Condition. With battery and charger. I have this programmed for Ham and up to 152 MHz before it will not lock on frequency. $225.00

GE MPA VHF Scan 157 - 174 split. 192 channels. Nice radio 8.5 condition with battery and standard charger. I have it programmed down to 154 MHz with no trouble but will go no lower. $225.00

GE MPA UHF Scan 440 - 470 192 channel scan. Radio works great. A little paint wear on the edges but I have seen worse. With charger and battery. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display. With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These look good and come with a battery and standard charger. $100.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha display. With battery and standard charger. $115.00

GE KPC 300 VHF 16 channel scan. Nice radio with battery and antenna. No charger with this one. $100.00

GE KPC 400 UHF 16 channel scan. Full DTMF pad on this radio.

This one has a charger. $195.00

GE PCS VHF 2 channel. Like new 9.5-10 condition. 150 -170 MHz.

With battery, antenna, leather case, and pocket charger. $100.00

each. 2 available.

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170

but I have programmed these in the ham band with no trouble. These

have battery, antenna, and standard charger. $85.00 each

GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can

program these to the ham band. With battery, Antenna, and Charger.

$85.00 each. Have 3 of these.

GE MPS VHF Like new 12 channel. With new battery, new antenna, and a

standard charger. $70.00

GE MPS VHF 12 channel. 8.5 condition. New antennas and NOS batteries

Standard charger. $60.00 each have 2.

SALE!

GE MPS UHF 48 channel. 8 = 8.5 condition, These have NOS batteries

And have 4 banks of 12 channels. These can go to the ham band. I

have been Using one of these on my ham repeater and it works great.

$60.00 each I have 8 of these. Programming on 12 channels included.

GE UHF MPS 8 channel with 8 different tones. 8 different tones can be

Selected for each different channel. Battery and antenna. $50.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1

good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I

sold this radio a year ago but have taken it on trade. Condition 8

with belt clip and charger. I had this radio run for stolen from CSX

by a local CSX Special Agent when I first bought these in a lot and

was told that it had been sold at salvage. Perfect for a RR Museum or

shortline on a budget. This could also be programmed for marine

frequencies. Like new tall Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms.

$100.00

GE MVS 800 conventional 2 channel. With mic tested OK $75.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240

450. - 470 Looks good. $125.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00

each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr

II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that

I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Just in not tested. $70.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.

16 channel model has short cable and some handle bar mounts. Mic

included but no speaker. Not tested yet since I just got it in.

$50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit

charges your battery and turns your portable into a mobile radio.

(Convert a Com) With mic, speaker, and power cable. $100.00

GE Accessories

GE TQ 2310 suitcase programmer. Has PLS, Phoenix, Delta s/sx, Voice

Guard, MPS, and Ranger. Printer is working Has manual for the

programmer and the computer. Has Phoenix cable and Voice guard cable.

All in the original GE case tested and working. $850.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00

Other Radios and Accessories

Motorola Saber III Secure VHF 146 split 120 channel radio. Alphanumeric

Display. Has Battery Smart charger and speaker mic. I have been using this on the VHF ham band. Has a new case that was installed at the Motorola Rockford, IL Depot

So it also has a new model sticker that they put on as well. Nice 9.5 or better radio.

$475.00

ADI AT 201. 2 meter portable nice like new and in the box with the

manual. Has 5 watt battery and wall charger. $90.00

Yaesu ft 2400 2 meter mobile. Has Mounting Bracket and manual. Nice

2 meter Radio. $125.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great.

This was in my van before I added another MVS so I know it works.

$100.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery

charger but I will split up the pair if someone wants 1 radio only. 6

channels programmed for 10 meter ham band on 2 repeater pair and 4

simplex frequencies. 2 radios and 1 charger $185.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by

Midland. $75.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition

and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of

crystals for each radio. Also have a working battery and charger for

each. I have 4 of these. $50.00 all

Uniden SMS 825 TS, 800 MHz Dash mount radio. $55.00

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work

with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know

"Motorola" They are good people and I will pass along any trades you may wish to make.

MOTOROLA X9000 VHF 50 watts, alphanumeric head, Siren complete. $425.00

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola P200 UHF high power. 6 channel. $150.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS

Extra parts for GE suitcase programmers Data modules, Printers, cables, proms, Anything you have extra. MPA or MPD portables what do you have and what do you want for them? Johnson scorpion program cable.

Terms

All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me. Contact me off list at. Gundoc@insightbb.com

I am sure PW has copies of simple one valve MW radio's, like you I had the saem experience and built one - great fun, but buying the high impedance earphones might be difficult.

Ah, but today, to compare building a one valver, one has to build a scanner out of a TV varicap tuner !

Are you using the correct type of cable? It probably requires a "serial (modem or crossover)cable", not a "straight wired" cable. Check the user manual to make sure of the correct cable type.

Source record: 41807

Radio itself is a 8 out of 10 in appearance, however it has a PLL unlock problem. Would be a great fix'er'up as a backup rig. I am letting it go for the best offer I receive by tomorrow (Sunday) night. Comes with YK-88C 500 Hz CW filter and YK-88S 2.4 Khz SSB filter, operating manual, service manual and hand mic. No power cord is supplied . Unit will be sold as-is, I just don't have the time to fix it.

Please e-mail direct

ve3tmt@rac.ca

1009. IC-T81A Out of band mod. Questions

Newsgroup: rec.radio.amateur.equipment
Date: 2002-06-30 06:12:10 UTC
From: Joe Leikhim <jleikhim@nettally.com>
Message-ID: <3D1EA13A.74C69FBE@nettally.com>
Source record: 41822

Hi
I just performed this great mod! Seems to work good, especially in UHF where I intend to use on GMRS occasionally.

I did a quick check with a field strength meter on VHF band and unlike at UHF, I noted weak power in 156 MHz range vs 146mhz. I did not check with a wattmeter yet. Have you made any tests regarding transmitter purity and efficiency out of band? I would hate to pop the PA while simply testing. I did not remove the third diode mentioned by others; D55 as I hear it is not useable at 220MHz. By the way my SN is 68XX.

Thanks Joe

On cleaning up a smoke smell, I use one of the wife's Bounce Sheets
that she puts in the dryer with the clothes. It doesn't get the
equipment wet and you just throw it away when you are finished.

Interesting. Did you ever measure the conductivity or reactivity of the film
left behind
by a bounce sheet?
As for washing, some parts don't like to get wet. Like unsealed pots.

Punu, I have been running a Yaesu FT-920 since the first of the year and it is a fantastic piece of equipment....just get you some good quality filters and you are in business. I get great reports from all over the world running only about 65 to 75 watts. The DSP feature is great... Save yp some money and get you a radio that will stay with you for years to come.. 73's Larry KE4YDI

This is the second of two (2) of these I found on the shelf in an old electronics supply house. This one was, in fact, still sealed in the unopened box, but some fool scrawled "transistor checker" on one side, so I had to open it to make sure what was inside -- what a Catch-22!

This transistorized Jackson Electrical Instruments Company Model 562 Code Oscillator and Monitor apparently dates back to the early '60's (before zip codes).

Thanks for looking,
Tom

Hi everyone,

I have a spare T81A, plus options for sale. Everything is in great shape and works fine. Please feel free to contact me for more information on anything listed.

1) An original model T81A quad band HT (6m/2m/440mHz/1.2gHz), sn. 1xxx, which has wide band RX, unlike the newer models with coverage from 50-1000mHz (cell blocked), in the following configurations:

50.000 - 75.995 Mhz AM/FM
76.000 - 107.995 Mhz WFM
108.000 - 135.995 Mhz AM
136.000 - 174.000 Mhz FM
174.000 - 229.995 Mhz FM
300.000 - 399.995 Mhz AM/FM
400.000 - 470.000 Mhz FM
470.000 - 599.995 Mhz FM/WFM
600.000 - 800.000 Mhz FM/WFM
800.000 - 824.000 Mhz FM
849.000 - 869.000 Mhz FM
894.000 - 999.000 Mhz FM
1240.000 - 1300.000 Mhz FM

The rig also has expanded TX, which includes 220mHz. I wouldn't recommend using it for 220, except in emergencies, as it isn't terribly clean there. It's in excellent condition with a good BP200. Includes the original box and manuals. Please, no flames about the price, you can't buy these anymore, so it doesn't matter what the neutered ones are priced at. $210.00

2) The HS85 vox headset $25.00

3) A Standard CMP115 small speaker/mic (like the Icom HM46) $12.00

4) The Icom CP12 filtered lighter adapter $15.00

5) The Icom BC119 rapid charger and adaptor $50.00

6) The LC148 carrying case $10.00

7) R/T Systems programming software and cable $25.00

8) An E.H. Yost BP199 6 volt, 700mah battery $25.00

Thanks,
Scott, N9AI

It is a collectable item for the Morse aficionados and it's value is
increased with the amount of tapes you have to go with it and the condition
of the tapes.

Stick it on EBay and you should get a fair price for it.

>One thing to consider along with the exterior, is of course the interior of
>the rig. How do you clean the smell off from the inside of the rig? I am
>sure that the film and smell is on the inside of the rig. What solutions
>are safe to spray on the inside of the rig?

Another technique, suggested by an electronics-service guy in The
$ensible Sound some years ago, is to open up the case and leave the
rig outdoors in bright summer sunshine for a week or so. The
ultraviolet in the sunlight will break down and/or drive off many of
the smelly volatile components in the cigarette-smoke tar.

Tobacco tar is nasty, tenacious stuff - difficult to remove from
surfaces. Consumer Reports uses it as their "hard to remove" test
material when testing glass-cleaning liquids. It usually requires a
lot of scrubbing.

Hi Folks,

Just got myself a secondhand '790 (Yaesu 70cm multimode)

what is the default repeater shift please ? it seems to be around 7 MHz
at first
glance.

I have found no mod info regarding adjusting this - 'course I can work
repeaters with the VFO/MEM split function but thats a bit naff

any other mods out there (other than 9K6 packet or QRO 2.5W)

e.g. stepping mods , listen on input, extended coverage, etc ??

Regards

SF

"Simple Green" just devastates smoke residue BUT you will need to hose down with lots of water else it leaves a film. I've done this many times but the main thing you don't want to get any water up into is the power transformer. I speak from bad experience!
So, spray dry chassis with generous Simple Green, let soak a few minutes, paint brush to clean in between I.F. cans, etc. then lots of clean water. Leave outdoors in the hot sun for a few hours to dry, then flip the chassis over to dry out the pots, etc.
If you're nervous about whatever scheme you use, try it on a disposable piece of gear...component stereo from a bar or similar.

The machine is called an "Instructograph". I first learned code on one of these about 40 years ago. I had about 20 different tapes for mine. If yours is original, you might want to take a look inside. The audio oscillator circuit is interesting. It uses an 80 tube for the audio oscillator. It is a very simple and easy to work on circuit. I almost wish I still had mine. (Lost it in a flood about 20 years ago).

Oh, I know I'm not the only one. Four other persons, perhaps too chicken to say anything here, sent their comments by email. That's fine. As I told them, I was really too chicken to say more than what I actually did say, even though I obviously wanted to say more. ;)

And, yes, you may have lived a sheltered life. You see, one of the prongs is... Wait. You said circuit, didn't you? Never mind. ;)

As I remember, the 80 is a rectifier. A four pin base. Not likely to be an oscillator.

Sorry, it was a 30, not an 80. You are right about the 80 being a rectifier,
the 30 is a triode. Getting a little confused in my old age.

1045. Info on Drake UV-3 Tribander

Newsgroup: rec.radio.amateur.equipment

Does anyone have the info on a Drake UV-3 Tribander (Model # 1346)?

I need to find out the output power and current drain at low and high power.
I believe that the radio puts out 25w on 2m and 10w on 220/440.

The UV-3 is rated at 25 watts output on 2 meters, however most of them did 30 to 35 output. The 220 and 440 bands are rated at 10 watts out. Low power is approx. 10% of high power and is adjustable by an internal resistor. Max current drain is around 6 amps on high power and 1.3 amps on low power. I use to do final test on those radios at Drake many years ago.....

The UV-3 draws .9Amp on standby, 1.3 Amp on low power, 1.3 Amp on high power. These numbers are for a factory set UV-3. You can re-set your low power to anywhere up to 25 Watts on 2 Meters by changing a resistor value or installing a rheostat in it's place. 220/440 can be set for a low power up to 10 watts.

The high power setting is nominally 25 Watts for 2 Mtr, 10 Watts for 220/440.

I repair about a half dozen of these in any given year and 90 percent of the failures are on the Vcc collector voltages dying due to failed 10 ufd tantalum capacitors which are used throughout the radio for bypassing supply lines. The rest have failed RF amps (6 percent) and the other 4 percent are user lapses (dropping, user troubleshooting gone bad, bad mods, etc etc).

All in all it is still a great radio. I keep two in my shack here. One is the original I bought in the 70s and the other is a basket case I restored from a hamfest bargain.

The GE MASTR radio on low band went from 25-50 MHz.

I have been told that the low band amplifier will work on six meters
(50-54 MHz). Can anyone confirm this?

Punu,

I would not overlook the Ten Tec equipment. Ten Tec is noted for excellent quality, especially when it comes to CW. The QSK is superior. The keying, stability and receiver sensitivity selectivity are excellent also.

You can purchase factory reconditioned gear direct from Ten Tec with a return policy. You then know the equipment has been checked and serviced by expert technicians. There are many models to choose from, so I am confident you could find one in your price range.

Regards,

Don - K2PMC

1052. Raytheon TWT need info

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-01 19:54:03 UTC
From: jimdmtn@yahoo.com
Message-ID: <30f1ca24.0207011154.6915a9ba@posting.google.com>
Source record: 41763

Hi,

I have some old Raytheon TWTA's that I need wiring and voltage specs for. The tubes have the QA test data, but I don't have the wiring or application notes.

I can easily identify the collector, ground and have a good idea on the filament, but I have two connections left to figure out. Hummmmm?

They are Raytheon tube type QKW1922N manufactured in the early 1980's.

The folks at Northup Grumman (who now own Raytheon's old TWT division) have not yet been able to come up with anything.

If anyone can help me out, I'd appreciate it. Of course, I would compensate a reasonable sum for time and effort.

Thank you,

Jim

Someone on another VX-7R group posted
if you hold the Mon/F + Internet key + SET
while turning the power on it gives you
what looks like the Alignment Menu.

You can make changes by pressing the V/M button
then turn the frequency knob.

I don't know if pressing the V/M stores it
or like the VX-5R pressing the HM/RV will
save it and exit at same time.

Mine comes up on the UHF band. I would like
to know how do I change bands?

>Does anyone know how to bring up the audio in the TM-G707A?

Assuming that you're talking about the transmit audio level... the deviation control in this model is done via a software-based adjustment.

You can find a description of the adjustment procedure at http://www.mods.dk/ - click on Kenwood, select tm-g707a, and then select "Low Audio Fix for Kenwood TM-G707".

The only hardware required is a mini-DIN-6 plug (e.g. PS/2 keyboard connector) with pins 3 and 6 shorted together... you'll need this to put the radio into alignment mode. [The alternative procedure, which involves waiting until the hologram appears and saying "This is Worker - hello!" appears not to work reliably with this model.]

This is correct, BUT the CG's equipment DOES meet NTIA standards or they would NOT be able to
use Federal money to procure it. If you are using an amateur Yaesu radio, almost NONE of them meet
NTIA standards, and even auxilarists and CAP members MUST comply with NTIA standards.

That said, can you guy's take your little urination contest to eMail and leave the group out of it?

> (50-54 MHz). Can anyone confirm this?

The GE Mastr II radios can do six meters,
but it is wise to buy one that is made for 42-50.
Surf the web and you will find the serial number codes
as well as lots of other info on these rigs.

The radio is in good working and looking condition.
Comes with all as new.
Not sure how well the nicad pack is since i use the AA pack.
As of 1 year ago it last for about 1 hour.
E-mail me direct for pictures of the radio.
$70 shipped lower 48 states ups insured.

I love my Yupi MVT 7100. Had it for many years and thousands of miles.
It could use a new case, it's been dropped, banged up and the battery
cover is broken (duct tape works...) but it keeps on working.

It's great for camping / hiking since I can check on the weather, listen
to the forest / park rangers and my favorite SW, FM, AM and TV (audio)
stations. It's a great bargain for the price too.

For local around the town scanning I use my Bearcat BC245XLT for
trunking and the Yupi for other freqs.

Cons: No PC interface, no ferrite antenna (for AM) and the scanning
speed could be faster.

I'd buy another (I'm planning to...) in a heartbeat.

CUL,
-barryc

Neither do I.

In New York we all know how to read, so book stores are profitable. We have several in our small town and all carry QST at newstand price. Perhaps when the literacy rate in New Jersey picks up, bookstores will open up there also.

Hello former HL9'er... where were you located when you were here? I'm located in Anjong-ri, near Pyongtaek.. about 80 clicks south of Seoul near MSR1.. Haven't had a single contact with an American ham since I've been here.. can't even hear anything east of HI... I know there are other hams here in country, but it seems I'm too close for HF, and too far for simplex VHF/UHF.. :($1200 radio, and no one to talk to.. (not much to listen too, either, since my QRN level is often 20dB over S9..) :(

Take care, and stay well.

Brenda Ann

QST, CQ and other such mags are also in most public libraries, if you check the
central facility. A good place to look at current and past issues.

The main thing is to make sure that the rig is using glass-epoxy circuit boards. If it has phenolic boards, as many of the Japanese rigs do, the boards can delaminate.

Ken:

I think the digital stuff is on one of the microwave bands. In any case, there's still lots of analog in the 800 MHz band.

Personally, I consider it a nuisance. I frequently receive images around 903-905 MHz (Ham band), and I'm not interested in listening in on other people's conversations. I hear enough of them in waiting rooms etc., and they range from mundane to dreadfully boring ;-)

[Yes, I know having them come in on my scanner is not their fault.]

Thanks all. I found a real "commercial" conical spiral that covers
1.7-2.7 GHz with nominal axial ratio of 3 dB in the right price range.

QFH are way too narrowband when operating at S-Band.

mm

Good condition 1.5 kW MFJ tuner with cross-needle meter. Recently acquired
but didn't need it. Electrically great. Few scratches characteristic of age.
No dents or dings. Great addition to your ham shack.

Asking $150/bo plus shipping.

Oh, come on, Terry. Since this discussion was vaguely about ham radio, and a good number of hams are involved with the Auxiliary, this discussion was not that much of an intrusion, was it? :)

Furthermore, when you posted the message above, the discussion had already ended in this newsgroup several hours before (after all, most discussions that end with "take care" have ended).

Besides, what you saw as a "urination contest" was simply two people with different viewpoints discussing a similar interest. And I would strongly prefer that, here and within the Auxiliary, to no discussion at all.

However, if our discussion truly bothered you that much, please accept my apology. And, to insure the thread does not continue (bothering you still more), I'll try to end it here by not responding further. Take care.

In my area, the police have moved to those blocked frequencies to avoid having anyone listen into their conversations. However, I'd prefer police not conduct their business in secret (and old idea that is perhaps out of date today). Much of the government in this area has moved to those frequencies also. Likewise, after living under the threat of the highly secretive soviet government for decades, I'd prefer government not conduct business in secret too. My ability to listen in on those frequencies helps, in a very limited way, to prevent both of those.

Dwight -

This is a very interesting post.

The specific frequencies in the 800MHZ band that have been reserved for cell usage cannot simply be "taken over" by your local police or any other government agencies.

Do you mean that some scanners block out MORE than the required cell frequencies, and it is on these peripheral frequencies that your locals have gathered?

Mind you, I'm not challenging you, just trying to understand the whole picture.

Thanks/73

Jeff Singer K2KV

Source record: 41669

There seems to be some confusion in the Posts about the "blocked portions" of scanners.
A) ONLY the "Cellular" portions of 800Mhz are "blocked" from most major scanners (Uniden Bearcat, Radio shack, Alinco) , There are No Police, or other Agencies that can legally use the blocked frequencies in the USA, they are for Cellular phone transmissions ONLY. Nobody's "police Department" moved into celluar frequencies. Police portions of 800Mhz are included in most major scanners.
B) Nationwide almost All cellular companies have switched to Digital transmissions, at all cell frequencies, making it more & more rare to hear analog cell transmissions, even on "full unblocked" scanners. There is still some analog being used, but every day these signals dwindle less & less....
C) Icom did originally remove the entire 800Mgz range from a few of their receivers, perhaps those that don't know other manufacturers exist ASSumed all scanners have the entire 800Mgz removed.

Source record: 41673

I have a 3 year old TH79A Kenwood. Great radio with very little use. The problem is that it is sitting here beside me, and about every minute or so, it starts this incessant Beep Beep Beep. It does a short beep about every 2 seconds for 10 seconds up to a minute or two. Triggering PTT does not make it stop, it just seems to stop all by itself.

This radio had the "Green Wire Mod" done to it, but it made the noise before... I know there was an issue with the TH78 and the PLL Beep.

Any clues?

Yah. I really don't care for the sort of social ethic which has grown
up around cellphone usage. Between people blabbing their personal
issues loudly in public (without a thought to the disturbance they
create on everyone around them), and people interrupting their
conversations with you every time their cell-phone rings (and leaving
you waiting on their convenience) I find 'em rather maddening. I
refuse to buy one.

I do find it amusing that exactly this sort of problem was
predicted, in amazingly fine detail, almost precisely 50 years ago!
See Ray Bradbury's 1953 short story "The Murderer" - you can find it
in his "Golden Apples of the Sun" collection, which ought to be
available in a good public library.

I've heard that in Japan, a system not dissimilar to the one proposed
in "The Murderer" is actually in use in some places (e.g. restaurants).

I'm reminded of a tale I heard years ago. A small-town grocery
store got in a really big load of mushrooms - got a good deal on them,
I guess, and they bought more than they'd usually sell in a month.
The store sold a bunch during the first few days, but sales dropped
off after that. The mushrooms just sat there in the bin, getting
older and dryer. The manager marked down the price, and then even
more, and then even more... and the mushrooms just weren't moving.

The manager pulled 'em off of the shelves for a few days, then put
them back in a new bin, with a sign reading "Aged Mushrooms" and a
price _higher_ that they'd had when they were fresh. The supply sold
out within a few days.

True story? Who knows... but if it didn't actually occur, then it
very well should have!

He he

I saw an Icom IC-2100H go for $195.00 (Cost new in box - $129.00) on EBay

If I could count on large number of these fools, I would buy a dozen at a time and put them on EBay.

Source record: 41679

I shorted the power supply and now it doesn't do anything, just like the primary fuse was blown. The relay doesn't pull in, no power light, nuthin'. Does anybody have a schematic for a Yaesu FP-757hd power supply? This is the supply which matches the FT-757 rig.

If you have one you can scan and e-mail, I'd appreciate it! I've sent a note to Yaesu about it but no response yet. I found the manual for the 757 and the tuner, but I don't know if I ever got a manual for the power supply.

Thanks,
Kerry

IF someone is gullible enough to pay the price, it is on them! No one is holding a gun to their head. I've sold things on E-Bay for far more than I actually wanted for them. Had someone came into my shop, I could've sold it for about 1/2, saved them the shipping and myself the pittance of a fee charged to list and final selling fee. But for whatever reason, most seem to think it is safer to buy via E-Bay than straight out, anymore. So hey! If that is how I must sell, then that is what I'll do. People can AND DO get ripped off by E-Bay. So it is NOT any safer. Hopefully once I get my web site up, I can sell from it and forget the long waits involved with the auction and subsequent payments.

My 2 cents.....

I looked at http://www.mfjenterprises.com/manuals.php for a manual, but there doesn't seem to be one for that item. You're not talking about the 9420 are you? There is a manual for a 9017 (17 meter CW TX) at http://www.mfjenterprises.com/man/pdf/MFJ-9017.pdf. Is the 9020 a 20 meter CW TX? If so, I would imagine that the manual for the 9017 would be close enough...

Ebay can be a crazy place.... but... you can SELL much easier
there than here! Most Net users don't even know these
newsgroups even exist. With the Ebay "feedback" your chances
for a reliable purchase is better if you check the seller's history.

(QTH.COM or EHAM.NET are far better than the newsgroups.)

Much of Ebay's craziness is the result of the psychology of
bidding- competing for the sake of competing.

The IC-2100H madness was the result of people buying them
up and then selling them on Ebay- for purposes other than
ham radio (EMT use for example). Throw in some truckers
and you get the idea. :-)

There are many hams/collectors out there who rarely go to a hamfest
and Ebay becomes their source for gear. Where else could one go?

My pet peeve is the unlisted "reserve" price. Anyone who does that
is an idiot. Just start the bid at their minimum and let it go at
that.

The real kicker is the seller who essentially says "If you screw me up
I'll leave negative feedback"... and you check their's and they have
negative feedback.

!!

I have a N6ZU built HF amp 10-80 meters. Tuned inputs, vac. variable, peter dahl transformer, runs 2 emiac 4-400A tubes full out, all less than 2 years old. And PS. is in same cabnet will sit on your desktop. 75 pounds is the weight. I will also include another pair of emiac 4-400As Full output. The amp is indestructable. You will not find a tighter well sounding amp. And its most certianly better than any commercial job IE ameritrons. I am selling this because I am no longer invovled in the hobby and could use the extra bucks for my street rod. I paid $900.00 for it make me a reasonable offer. No lowballers .

Thanks
w9jcm John

I used "reserve" on one occasion on a couple items both up for auction at same time. For those 2 items I did want a certain minimum amount. Would I use it again, I doubt it.

As for sellers saying they will leave negative feedback, I just did that too. I and several others - I found out, got screwed by the same bidder. He bid, e-mailed his address and that was the last you heard from him. So NOW, I will leave negative feedback "for not completing their end of the deal." That is the only reason. I've had little problems with all others. Mail delays are horrendous, but that isn't the bidders or seller's fault.

If BOTH parties follow through on their end of the deal, communication lines kept open, there should be no or very little problem. My biggest problem by far has been proven to be MAIL LAG.....Hopefully, their new raise will give them a boost to get the lead out.

I can not recall ever leaving a negative on a seller I've dealt with. I hope I never have to. I check out profiles prior to buying. One or two or so bad ones against maybe a couple hundred good do not persuade me against buying. Now if it were like half and half, then I would have to think about it.

I have NO negatives as yet. But, keep one point in mind. YOU CAN"T PLEASE EVERYONE. Even though I sell ALL items AS IS - describe them as accurately as I can - ship within 48 hours, sooner or later, someone I'm sure, will give me a negative. If nothing else, to break the chain of good feedback. WHY? Because that is just how some operate.

I belong to an organization where one guy will vote against "just to show" it doesn't always have to be a slate of "yes" votes. So, if there is one like that, there are bound to be plenty more.

But as I may have said before..... I use e-bay as a "last" resort.

If you're talking about the receive audio, you'll need to use an external speaker to bring up the volume. If you're talking about Transmitter audio level, follow Dave Platt's advice as he replied to you. Talk close to the mic, too, if necessary.

I have for sale in excellent condition a Yaesu YD-844A desk microphone. Its a 9 out of 10 and can be switched between 600/50kohms. It matches the FT-101 series and can be used on any radio providing you change the microphone pin out. I will take $60 plus shipping and can be reached at (508) 821-2993 or email. WZ1U Steve / Lakeville, Mass.

1140. Re: What's the deal with "unblocked" scanners?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-05 01:44:10 UTC
From: WG <nojunk@mail.com>
Message-ID: <KR6V8.26434$YC4.406077@news0.telusplanet.net>
Source record: 41701

I Listen to cell-phone calls all the time and love it, (it is not illegal in my country). I have listened to people having phone sex, committing crimes and the busy dial a drug trade. One of the best was 2 known gang members planning their next hit. I saw it in the news about 2 days later and it was just like they said except they missed the target. I was listening on one scanner to the police investigating a B&E with theft of a new lawn mower. My other scanner was listening on cell when I picked up a guy calling his dealer to order an eight-ball and was going to pay for it with a new lawn mower that he had just stolen. He also needed a ride out of the aria and gave the exact address that he was at just 2 blocks from the B&E. I also have a hole list of credit card numbers, expiree dates and names how stupid can people be to use their credit cards on a cell-phone I will never know. It has now gotten a little boring with most of the illegal stuff moving to digital but just a few years ago it was more fun then listening to the cops. Unblocking a scanner is so easy you should give it a try and see what you have been missing.

Please if you have questions or want to make a trade contact me off

list at my e-mail address. gundoc@insightbb.com Some of these

lists are not swap lists and only tolerate my post because it is only

once a week. To the group owners thank you for letting me continue

to post to the group.

Dean

I will be at the Indy Hamfest Saturday July 6 so if you are going and

Want me to bring anything in specific e-mail me and I will try to bring

It along.

GE Portables

GE MPA VHF Scan 136 - 150.8 split 192 channels nice 9.0

Condition. With battery and charger. I have this programmed for

Ham and up to 152 MHz before it will not lock on frequency.

$225.00

GE MPA VHF Scan 157 - 174 split. 192 channels. Nice radio 8.5

condition with battery and standard charger. I have it programmed

down to 154 MHz with no trouble but will go no lower. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.

With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These

look good and come with a battery and standard charger. $100.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha

display. With battery and standard charger. $115.00

GE KPC 300 VHF 16 channel scan. Nice radio with battery and

antenna. No charger with this one. $100.00

GE KPC 400 UHF 16 channel scan. Full DTMF pad on this radio.

This one has a charger. $185.00

GE PCS VHF 2 channel. Like new 9.5-10 condition. 150 -170 MHz.

With battery, antenna, leather case, and pocket charger. $100.00

each. 2 available.

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170

but I have programmed these in the ham band with no trouble. These

have battery, antenna, and standard charger. $75.00 each

GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can

program these to the ham band. With battery, Antenna, and Charger.

$85.00 each. Have 3 of these.

GE MPS VHF Like new 12 channel. With new battery, new antenna, and a

standard charger. $70.00

GE MPS VHF 12 channel. 8.5 condition. New antennas and NOS batteries

Standard charger. $60.00 each have 2.

SALE!

GE MPS UHF 48 channel. 8 = 8.5 condition, These have NOS batteries

And have 4 banks of 12 channels. These can go to the ham band. I

have been Using one of these on my ham repeater and it works great.

$60.00 each I have 8 of these. Programming on 12 channels included.

GE UHF MPS 8 channel with 8 different tones. 8 different tones can be

Selected for each different channel. Battery and antenna. $50.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1

good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I

sold this radio a year ago but have taken it on trade. Condition 8

with belt clip and charger. I had this radio run for stolen from CSX

by a local CSX Special Agent when I first bought these in a lot and

was told that it had been sold at salvage. Perfect for a RR Museum or

shortline on a budget. This could also be programmed for marine

frequencies. Like new tall Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms.

$100.00

GE MVS 800 conventional 2 channel. Without mic tested OK $45.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240

450. - 470 Looks good. $125.00

GE Mastr II UHF 75 watt with preamp. No Icoms drawer only.

MC65KKG88B $90.00 each only 2 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A

With 1 set of Icoms $45.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33

With 2 sets of Icoms. $10,00 each. I have many.

GE Mastr Pro 110 watt lowband 42-50 split in a wall mount cabinet

With a power supply for a base. $35.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00

each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr

II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that

I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Just in not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.

16 channel model has short cable and some handle bar mounts. Mic

included but no speaker. Not tested yet since I just got it in.

$50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit

charges your battery and turns your portable into a mobile radio.

(Convert a Com) With mic, speaker, and power cable. $90.00

GE Accessories

GE TQ 2310 suitcase programmer. Has PLS, Phoenix, Delta s/sx, Voice

Guard, MPS, and Ranger. Printer is working Has manual for the

programmer and the computer. Has Phoenix cable and Voice guard cable.

All in the original GE case tested and working. $850.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen

programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5.

$4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and

162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50

each.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820

heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a

rapid rack charger with a DB 15 cable and uses a MPD body to attach a

battery to. Has LED readout in display area of MPD body to tell

discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card

and power supply / speaker. $300.00

Other Radios and Accessories

Motorola Saber III Secure VHF 146 split 120 channel radio. Alphanumeric

Display. Has Battery Smart charger and speaker mic. I have been using this on the VHF ham band. Has a new case that was installed at the Motorola Rockford, IL Depot

So it also has a new model sticker that they put on as well. Nice 9.5 or better radio.

$450.00

ADI AT 201. 2 meter portable nice like new and in the box with the

manual. Has 5 watt battery and wall charger. $85.00

Yaesu ft 2400 2 meter mobile. Has Mounting Bracket and manual. Nice

2 meter Radio. $115.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great.

This was in my van before I added another MVS so I know it works.

$95.00

Uniden SPU480K UHF 8 channel portable. Has two good batteries drop

In charger and speaker mic. $80.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery

charger but I will split up the pair if someone wants 1 radio only. 6

channels programmed for 10 meter ham band on 2 repeater pair and 4

simplex frequencies. 2 radios and 1 charger $185.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by

Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition

and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Uniden SMS 825 TS, 800 MHz Dash mount radio. $45.00

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

MOTOROLA X9000 VHF 50 watts, alphanumeric head, Siren complete. $425.00

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola P200 UHF high power. 6 channel. $150.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS

Extra parts for GE suitcase programmers Data modules, Printers, cables, proms, Anything you have extra. MPA or MPD portables what do you have and what do you want for them? Johnson scorpion program cable.

Terms

All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me. Contact me off list at. Gundoc@insightbb.com

What, with 3/4 of the pages saying "this page still under construction,
please check back often?

BTW the "registration" link on the website is to c:/My Documents/free.htm .
I think it's going to be a long time before the web site gets up and
running.

Stop, Jim. You're making me blush. As for the rest, it's a matter of age for most. In youth, it is good whiskey, fine women, and fast horseflesh. By middle age, it is fine whiskey, fast women, and good horseflesh. Later, it is just whiskey and women (the horse is just too darn hard to ride and few are very selective when it comes to women - which means any whiskey is just fine to help forget what once was). :)

I may have to mount the .47 in the base of the mic, which means it will be
in line for both the Icom and the Kenwood 2m allmode. By putting the cap in
this position will it alter the characteristics or output of the audio going
into the Kenwood? Or will it strictly block the DC voltage?

Thanks,
Max

FOR SALE:

Collins 516E2 Power Supply for KWM-2 transceiver - runs on 28V DC.
Needs capacitors replaced inside. Otherwise appears to be complete
and ready to restore.
See picture on web page below...
Will sell for $49.00 plus shipping

WW2 British Mark 2 straight key. Contacts are still in very good
shape.
A few imperfections as you can see - not perfect,
but will polish up and restore nicely.
Missing two screws, but otherwise clean and in nice shape.
Picture available on the web page listed below...
Will sell it for $35.00 plus shipping

James Millen Company SWR Bridge Type 90671
Beautiful black crackle finish. No scratches or dents.
Serial Number 812. Has SO-239 connectors.
Has phono type output for 0-1mA meter.
Picture available at the web page listed below...
Will sell for $35.00 plus shipping

MFJ Keyer model MFJ-401 - non-working, but case is perfect and all
parts are there. Looks great.
This is the basic keyer with no memories. Has speed and weight
controls.
Operates on 9V battery. May just have a loose connection.
No time to troubleshoot, hence low price.
Picture available on request.
Will sell for $9.00 plus shipping

MFJ-1224 RTTY and CW interface with manual and cables.
Great for getting your computer to send and receive CW and digital
modes.
Built in radio modem, decoder and many refinements.
From the leader in affordable digital radio interfaces, MFJ.
Excellent condition. Looks just like new.
Will sell for $35.00 plus shipping

Hallicrafters S-108 Receiver in near-mint condition.
All original and in excellent working condition. Has the original
Hallicrafters tubes in it and looks imaculate inside and out.
Very clean, no scratches, no dents, no rust. Has obviously been kept
VERY well buy someone who appreciated fine radios.

Picture available on web page below...
Will sell for $225.00 plus shipping costs.

1168. Yaesu VX-5R SU-1 unit query

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-06 13:37:58 UTC
From: Wayne Kerr <Wayne@hotmail.com>
Message-ID: <ag6rrp$n56$1@newsg3.svr.pol.co.uk>
Source record: 41729

I wonder if someone could assist:

I'm unsure how the VX-5Raltimeter is supposed to work. For example if I set the barometer offset (in my case I set it such that displayed hpa is consistent with the current QNH as indicated by local airport data) and then set the altimeter offset such that displayed altitude shows my actual height above sea level is this all I need to do? Will the correct altitude be shown (so long as I do not move the unit) indefinitely? Clearly the air pressure is always changing, does this mean I need to keep calibrating the VX-5R or is it a once only set up?

TIA

Wayne

I have 3 Clegg FM-76 radios that I have picked up through the years at hamfest. All seem to incorporate a similar mod to remote mount the radio. Does anyone have a copy of the article or know where the article was published that first talked about remoting this rig?

I would like to get a copy of this modification if possible.

Does anyone remember seeing an article of this nature?

Thanks for taking the time to read this post

To All:

It is true that "Auction" is a method of sale but please have the courtesy
of listing the item as "FA" not "FS".
There are many readers on the newsgroups that will not look at any "FA"
items.
It is not without good reason that E-Bay has gotten the title of the home of
the
greedy and the stupid. Although there are occasional bargains to be had,
many buyers do not want to wade through the mountain of overpriced listings
to find them.

Thanks,

Willis W.

True, but on the newsgroups, the way to advertise these is using FA in the subject line so that the people who don't like auctions aren't bothered. If you remember, there were no shortage of discussions (arguments) about this issue. A compromise to all of that, is that auction posts should be listed as FA so that all who dislike eBay and other auctions can simply not open them or use their filters. Unfortunately there are some newbies who haven't figured this out yet and some others who just like to be pains in the butt.

Any air pressure sensing altimeter will need to be recalibrated
periodically to cover for changes in barometric pressure due to
weather.

It is merely a pressure sensor. There are two major reasons why air
pressure would change: weather and altitude change. The device is not
smart enough to know why the pressure changed, you have to provide the
smarts to let it know whether you are at a fixed altitude, and the
change is because of a weather change, or changing altitude, and the
change is because of that, with possible weather changes mixed in.

Standard practice with a navigational altimeter, a $20 cheapie or the
finest Thommen made, is to reset it to exact altitude every time you
are at a known point. In quickly changing weather conditions, this
needs to be done more frequently. Topo maps will have the data you
will need for this, along with a good sense of navigation.

Happy trails,
Gary (net.yogi.bear)

Hello to all. I have a mint Kenwood TS-870S I would like to sell or trade. This radio is without blemish. No scratches, dings, scuffs, nothing. I don't smoke and I don't put anything on top of my radios. The radio operates perfect as new. If you've never heard the audio coming out of a 870s then you're in for a real treat. This is a 81,2XX,XXX serial number so it was manufactured with all the eprom and firmware updates that were added by Kenwood for earlier models. There are no updates needed or even available for this radio. Radio comes with Kenwood hand mic and manual. I will give buyer 2 days after delivery to return radio in same condition for full refund less shipping charges if radio is not as stated. Asking $1400 which includes shipping and insurance to lower 48. Will consider a TS-570DG or SG, or a TS-2000 as part of a trade. Check out my feedback on Ebay using my call sign as my seller id, plenty of references to keep your mind at ease.

I have a problem in a mobile installation that has plagued me with 3 Chev S-10 installations with two different Kenwood VHF/UHF radios. I have finally narrowed it down to a hum being picked up thru the antenna, which is mounted to the front fender on the drivers side. The antenna is a Larsen antenna mounted using an L bracket mounted to the drivers side front fender. The strange twist here is that the hum does not occur when using a Yaesu mobile radio, only on a Kenwood. The hum sounds like an alternator hum, only on the receive audio. Everyone tells me they can not hear it on the transmit audio. Has anyone else had this problem and could you tell me how or what to do to fix it? Why does it only seem to affect the Kenwood radios and not the Yaesu? I don't own an Icom so I don't know if it affects Icom's or not. If I use a mag mount antenna the roof the noise is not present. I see other people using the L bracket mounts on the front fender with no problems, but I'm at a loss as to what the problem is.

I would appreciate it if someone could give me some help.

James,

Sounds like you have an alternator whine problem. Have you checked this
site? http://www.k2bj.com/Pages/Noise/Intro.htm

Wealth of information regarding mobile setups.

Good luck,

Max

Alternator hum is sometimes difficult to fix. The audio hum is due to the lack of good regulation and filtering on the Kenwood audio circuits. The hum will be the loudest when your +12 source and ground connections are electricly nearest the alternator.

There are several things you can try:
1. Take your red (+) power lead from the rig all the way to the battery terminal.
2. Find a good ground for the rig near where it is mounted. Eliminate any other ground connections.
3. Disconnect the coax ground shield from the antenna connector at the fender. The only ground you need for the coax is the one on the connector at the rig.
4. Install a alternator hum filter on the red wire to the battery. I think Radio Shack still sells them.

Good luck,
Larry, K7RSP

A couple of my TM-742A or 641A or the like Kenwoods have a LARGE lump that goes in the +12VDC line. That came with those rigs somewhere along the line during their life. It took all the hum out of my TM-742A that is fed from the CIGARETTE LIGHTER. (Yes, I know, don't bother telling me why I shouldn't do that.)

I suspect that there was a problem when they were first made and rather than fix it on the rig chassis itself this external filter was provided and incorporated in later ones sold.

Without that filter I had alternator whine on my transmitted signal but none on my received signal.

I'd assume the lack of a problem with the Yaesu indicates better filtering.

FWIW, the FA on the front of the message, allows those of us who do not share in the belief that Ebay is the best thing on earth to filter our messages. A matter of courtesy on the part of the seller. I noticed this because I happened to have my filter turned off.

Messages to a ebay link are as offensive to me as porno link spam in the newsgroups.

Hi folks,

I found a lot of discussions in the news about the subj. Also I read both QST and ARRL reviews on each rig.

But are there any place in the Internet with summary about it?

Like scores for each particular parameter for both models?

My impression after reading all these stuff that ICOM-756PRO has 9, but TS-2000 has something between 7 to 8 for HF bands.

Am I right ?

Regards,
Igor

Hi, Igor...

I own a 756PRO and have spent some time playing with the 2000. The PRO is an outstanding radio in every department except for a "wimpy" noise blanker. (I'm told the PRO II is even better.) I replaced a superb FT-1000D (just back from full factory alignment and updating) with it and was able to do some A/B comparisons before I sold the 1000D. There were a few instances in which the PRO could pull a weak signal out of the QRM or background noise when the 1000D could not, and no cases where the 1000D was the winner.

I was thinking about a 2000 for my car. After using one in the store for a while, I told the salesman my impression is that it does a remarkable number of things but does none of them particularly well. He said that has been his impression exactly. I'm sure many 2000 owners will dispute that statement.

My interest was HF only. I already have a 2m/70cm radio in my car and want to monitor our local repeater WHILE talking or listening to HF. I settled on an FT-100D for the car. It has a noise blanker that's pure magic... it completely ended the ignition noise problem that has plagued me for eight years, through 2 or 3 different vehicles with my previous radio.

I might add, just for fun, that there have been a number of A/B comparisons where the receiver in my Elecraft K2 could easily copy a signal that my PRO couldn't!! Never has the reverse been true. The K2 is now available in a 100-watt version... if you enjoy building kits.

1198. For Sale: Yaesu FT101Z and FT290R

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-07 16:50:57 UTC
From: g3pho@nospam.qsl.net
Message-ID: <3d285b8b.4202277@usenet.free-online.net>
Source record: 41608

To UK Radio Amateurs only...

I am offering the following items of equipment for sale on behalf of an Old Timer radio amateur who unfortunately has had to QRT due to illness. The equipment has been removed to my shack here in Sheffield and is available for inspection at any reasonable time of the day or evening. Please mail me at g3pho@qsl.nospam.net (remove "nospam" first!) or tel. 0114 2816701

FT101Z: HF (160-10m but no WARC bands) transceiver, 100W o/p all bands. In very good condition, complete with Yaesu desk mic and Yaesu headphone. Two spare 6146B PA valves. Manual inc. Price ï¿½150

FT290R: 144MHz multimode transceiver, complete in shoulder carrying case, ptt mic, battery charger (but no nicads), mag mount mobile whip. Sold with Microwave Modules 30W output linear PA. All in exc. condition.The FT290R had not been used for a couple of years so the nicads were duff when I checked them.

Price for the FT290R + MM144/30 PA = ï¿½170. I would prefer not to split these two VHF items.

I also have a Europa 28MHz to 144MHz transverter that plugs into the FT101Z. It works OK and gives around 50 to 60 watts o/p. Price ï¿½30.

Oh yes... since I have been stung once before, I would like cash in the hand... no cheques unless you allow adequate bank clearance time before collecting the goods!

Prefer buyers inspect and collect. If not carriage is extra. I can deliver within a range of 20 miles from Sheffield city centre.

Peter Day, G3PHO

Hello! I have FOR SALE some external speakers. I have found that these sound as good or BETTEr than the Icom SP-21 external speakers. I have a qty of 3 Jensen bookshelf speakers, heavy duty wood enclosures, black with a black cloth grille. These little guys sound AWESOME! Here is how I discovered this. I had purchased a Jensen home theater surround speaker kit, and only needed the sub-woofer and center channel speakers. So I thought I would hook up one of the bookshelfs to my R-75. WOW! Sounds way better than the Icom SP-21, and way cheapier! This speaker looks sharp sitting next to the R-75, and is just a hair taller than it with the radio's wire bale in use. The speaker is approx. 6.5" x 6" x 6". Has spring terminals for connection. These speakers can be used with any ham or shortwave radio. I am asking $40 each INCLUDING Shipping in the US. Thanks in advance!

LARRY :-)

1204. New program COAXTRAP

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-07 18:13:51 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <aga0cv$f3l$1@venus.btinternet.com>
Source record: 41614

New program COAXTRAP.exe

Coaxial traps are often inserted in HF dipole antennas to isolate the ends of the wires from the the feedpoint thus shortening the effective overall length of the antenna. The antenna is then resonant in a higher frequency band. A trap is a parallel tuned circuit which is adjusted to resonate at the higher frequency.

A trap is constructed from a length of coaxial line wound as a solenoid on a cylindrical former. The program models the construction operation by assisting the designer to wind on turns until the required resonant frequency is achieved. The normal coaxial capacitance behaves as the high-voltage tuning capacitance although there is a transformer action in the manner of connecting the ends of the line together. This small program will be interesting even if the user does not intend to make any traps.

This program has been tested by me on only two actual traps - one using 75-ohm coax and the other 50-ohm RG 58 on different diameter formers and different numbers of turns. Errors in predicting resonant frequency were less than 1 percent but great care was taken with measuring and checking dimensions. It would be appreciated if any constructors who have a trap in the shack doing nothing could measure it up and check frequency. If anything is suspicious please let me have the data and how it was obtained. It is possible on my solitary pair of samples I could have made a common error. The best way to measure resonant frequency is to use an antenna analyser on the Z range. Use a thin single-turn coupling loop around the middle and 6 or 10 inches of loosely-twisted pair to the meter. Look for a very sharp peak in Z.

Download COAXTRAP in a few seconds from website below. About 31 kilobytes. Not zipped up. Run immediately.

Whose antenna farm? Why would their running an easment "prohibit" it? Is it someone elses tower? If so, that other party would have an interest. I would have more concern with the other tower than potential power line noise. Underground utilities can get vey expensive, likely they will want you to pay for it. Somehow your whole story isn't getting accross.

Hello,

I am considering purchasing a Kenwood 570D(G) model, and was curiuos about the internal tuner capabilities. While adequate for some antenna systems, I'm sure there are some antenna systems that it cannot handle. Thus, I'd like to be able to use an external antenna tuner, such as an MFJ949E, or something similar. Can i just install the tuner in-line before the transceiver, and tune the antenna accordingly, just as if the rig did not have an auto tuner, and then simply don't use the "tune" button on the rig? Or is there a method to disable the auto antenna tuner in the Kenwood 570?

Regards,

Van,. KG4PTM

I would think that buried lines would not be a noise problem.. I believe
they bury high tension power wires at least 4 feet deep.

I assume you mean altenator "whine" rather than hum. Noise generated by an altenator is a whine that varies in pitch as you change the engine speed.

Alternator whine can sometimes get into the receive audio via the radio's ground lead when there are multiple grounds such as the antenna, the radio's ground lead, the radio mount, etc. It can vary from radio to radio depending on how the ground wire is routed inside the radio by the mfg. In the case of my Alinco, the whine actually increased in volume as I turned the volume contol down (counter-clockwise).

If you have no whine with the radio on but the antenna disconnected, try touching only the shell of the connector to the ground on the radio. If the whine appears, you have a grounding problem. In the case of my Alinco, the test was to isolate the radio by setting it on the seat and making sure there was only one connection to ground. As soon as I attached any other ground such as the antenna shield or touching the radio to its mount, the whine appeared.

The easiest solution in the case of my Alinco was to connect the radio's ground wire and the ground wire coming from the stud in the engine compartment directly to the cast aluminum case of the radio. I was able to do that by running a bolt and lock washers through a hole in the heat sink. This gives the noise currents a direct path through the radio's case rather than going through the radio's ground wire, inside the case, and to the PC board runs.

By the way, alternator whine filters do not help when you have a grounding issue. They do a good job if the noise is on the positive power lead rather than the ground. On my Mazda PU I can put a 0.1 mfd capacitor in series with an 8-ohm headset and actually hear the whine by touching the headset with capacitor across various vehicle grounding points - even across the short, heavy wire that connects the negative battery post to the engine block.

If they run overhead, won't that also be high voltage with a pole transformer located near the house? Having HV lines in your antenna field would be a much worse problem than having the cables underground. If you can, get them to route the underground lines somewhere besides through your proposed antenna location or you may have a problem digging for towers and guys.

1211. Need DIP Switch Settings for ICOM Micro 2AT

Hi gang.

I have resurrected an old ICOM Micro 2 AT. It is the original very small 2M handheld with the PL set with dip switches located under the battery pack.

Does any one have the dip switch settings for the variousl PL frequencies or an old manual for the radio.

I would like to get the old radio back on the road again.

Thanks in advance.

>> Is the hum present with the engine off? No.
>> Does the hum vary in frequency with changes in engine speed (RPM)?
> Yes.

Well, that does sound like alternator whine. You indicated it was coming in at the antenna. I suspect that issue was connected with the shielding ground on the cable being disconnected at the antenna jack, not the antenna connection itself.

I'm assuming you have a good ground from the radio to the battery negative lead. Short of addressing a possible open diode in your alternator, (where you really ought to start), there are a number of possible fixes; filters to install on the alternator, and in-line filters for the A+ lead. If your 2M rig is high powered, it might cost a bit for a large enough filter to handle the current. You might start with Radio Shack for filter solutions.

==========

Most internal antenna tuners will handle SWR up to 1.5-to-1 or perhaps more depending on what the impedance looking into the transmission line actually is.

When you need to use an external automatic tuner it is best to switch the internal tuner completely out of circuit. There is probably a front panel switch or button somewhere which operates a relay. When both automatic tuners are on together they fight each other. If they do settle down a small change in impedance sets them off again.

Another thought. If the internal tuner does its job very quickly the transmitter may automatically go to full power which the external tuner may not be able to handle if it has not yet tuned itself up. Best not to tempt providence. Isolate the internal tuner.

The first thing you want to do with ignition noise (pop-pop-pop sound) is to make sure it goes away when you remove the antenna, thus verifying that is how its getting into the receiver.

If it is getting in by the antenna, one suggestion is to move the antenna to the rear of the vehicle - far away from the engine. You can try grounding the tail pipe at several points with braid. Try grounding the engine block to the body with braid at multiple points. Try getting a good ground to the hood. Several of the mobile radio books and the ARRL handbook may have additional suggestions. Ignition noise is generated by the high-voltage and generally radiated by the spark plug wires and is usually the most difficult to cope with. I'm assuming that you have a fairly new vehicle which already has resistance wiring (if not, there is resistance type spark plug wires that can be added or you can use resistor plugs).

A noise limiter on the receiver often helps IF the noise level is already at a reasonably low level.

I live in the country, down my own private road.
Power is buried 7.2 Kv from the public road 1/2
mile from the house. Totally quiet. Transformer and
tap to the buried 7.2 Kv is 10' from the tower base.

However, I do get occasionally serious noise from

1) Bad hardware on some pole that is at least 2 miles away
It's SOMEWHERE over there across the valley to the NE,
but so far have been unable to find it.

2) One or another electric fence charger.
Usually can find these without too much trouble.

Power line noise is often associated with cracked or dirty insulators or lightning arrestors. It has rf characteristics similar to atmospheric noise or lightning. It tends to be broad band, strongest at low HF frequencies but extending into VHF and sometimes even UHF at lower signal strengths. Also, it travels down the wires, so getting a precise location takes some detective work. As you go higher in frequency it gets easier to localize.

Start with a 2 meter AM or sideband rig with a decent S meter. Go mobile with a small yagi that you can swing around by hand looking for peaks on the S meter. As you travel along the offending line you will likely find peaks and nulls. Work your way toward the higher peaks. If the noise is really strong you may have trouble pinpointing the exact source on 2 meters. In that case move higher in frequency -- 220 or 450. It takes some time but you can usually pin it down to a single pole.

AVVid

In August we will be moving. As usual I posted the info on my website and managed to get everything messed up. I will try to correct it the next few days (I'm not a net guru). The new address is correct but don't use it yet. I would appreciate everyone passing the word along. UPS will not forward packages and I don't want any lost. The phone numbers will be the same.

My e-mail will still be the same for anyone with questions.

>an old manual for the radio.

Here is the info on u2/u4AT subaudible tones.

The tones are selected in sequence starting at 67.0 hz and going
through 250.3 by a simple binary sequence of the dip switch, with
switch 1 being the least significant bit and switch 6 the most
significant bit. If you're not familar with binary arithmetic, it
means each switch is twice as much as the one before. So their values
are 1, 2, 4, 8, 16, & 32.

Example: 91.5 hz is the 9th tone is the sequence, so code the switches
for a binary 9 - meaning the 1-bit (1st switch) and the 8 bit (4th
switch). For the 23rd tone (146.2 hz), turn on the 16-bit(5th switch),
and the 4, 2, and 1-bits.

Switch 7 has a special function. If it's turned ON, the tone function
is always active regardless of the setting of the external TONE
switch.

I've spent a fair amount of time doing this. The area here is fairly difficult
though, lots of hills and very deep valleys, and the roads don't go where
you would like to go :-) To get to the other side of the valley (about a
mile and a half from here) is a 5 mile drive. Then there are lots of little
roads, some public, some private wandering here and there. The last trip
I thought I had found a likely cause, but that noise source was 30 degrees
off the bearing compared to the one that bothers me. It has since been
fixed. The bad noise is intermittent, does not correlate well with wet
or dry conditions, or temperature, or time of day. Audible only above
20 MHz. Is your typical "bad pole hardware" fizzy frying with noticable
120 Hz component. Someday I'll get it tracked down.

Radio is in excellent shape and comes with a spare battery and original box.
Has has the
Mars/Cap modification done professionally. CTCSS tone encode/decode and
simultaneous dual band receive.

$275.00 shipped.

Hello to all. I have a mint Kenwood TS-870S I would like to sell or trade. This radio is without blemish. No scratches, dings, scuffs, nothing. I don't smoke and I don't put anything on top of my radios. The radio operates perfect as new. If you've never heard the audio coming out of a 870s then you're in for a real treat. This is a 81,2XX,XXX serial number so it was manufactured with all the eprom and firmware updates that were added by Kenwood for earlier models. There are no updates needed or even available for this radio. No mods have been done. Radio comes with Kenwood hand mic and manual. I will give buyer 2 days after delivery to return radio in same condition for full refund less shipping charges if radio is not as stated. Asking $1400 which includes shipping and insurance to lower 48. Will consider a TS-570DG or SG, or a TS-2000 as part of a trade. Check out my feedback on Ebay using my call
sign as my seller id, plenty of references to keep your mind at ease.

I have been using the TS-570 with the MFJ941E and the internal tuner turned off. The scales on the MFJ are finely graduated and allow you to preset for the various frequencies by simply saving the setting to a chart and duplicating.

And I couldn't agree more! I have - in a lot of cases - sent photos of either the MO receipt showing their name and address if I'm the buyer OR the shipping receipt with their name and address if I'm the seller..... That way they can see for themselves there is a transaction taking place.

BUT.....One must use caution... The "mail" service - at least in my cases - is NOT living up to it's expectations or promises. Two good examples:

1. A guy in the State of Washington bought an item from me on E-Bay. He claimed to have bought a Postal MO and sent a Postal MO out on 5/28. We waited. A week - then two - then three - then a month went by. NO MO. He had to think based on his words of "let's see who cashed it", that "I" had to receive it. I didn't. I suggested to allow the 30 days as the PO won't do a trace until that time. 30 Days elapsed. They wanted to charge him x amount of money which would have been - added to the money he already spent, getting out of hand. So he opted to forget it and I being an understanding person, couldn't blame him. It wasn't worth it to pursue. The item wasn't that big or expensive to go through all that. I lost a small amount on listing and final value fee, but at this point, it wasn't enough to cry about it. On June 29th I got his MO in the mail. It was postmarked 6/27 and the MO inside had 5/28 - the date he claimed to have bought and mailed it. So either he didn't mail it out right away OR and this is what I do tend to believe, it sat in the Postal system for a month and caused undue friction between buyer and seller. I even sent him an E-mail picture of the envelope showing the stamped date.

2. Sent a package out to California from PA. Was going to send First Class. Postal Clerk says for a few cents more get it there in 2 days Priority. OK!!!! Like a sucker, I paid it.
The Number 2 was significant alright. It took 2 weeks and 2 days to the day from when I shipped it. THAT BURNS ME!

3. A package coming to me from New York took a week to get here. I live near Pittsburgh. I could have driven there in 4 hours and picked it up! There is NO excuse for that.

IF I as a business fail to ship when promised, "I" can be held liable for mail fraud and making false claims. I have to show cause why I can't ship, offer a monetary return or substitute or back order if the customer requests it. While these rules may not apply to E-Bay auctions, they do apply to my shipping business. BUT the Postal Service can say they can deliver - and usually don't in my experience in the time they say - but are NOT held accountable. But the "suspicion" falls on me for not shipping when in fact it wasn't my fault.

Case #1 and #2 can be proven. My point, you have to have "some" patience with "the system". The buyer or seller "may" be telling the truth. However, THIS is where the OPEN LINES of communication are most important.

As to my threatening people with bad feedback. I only gave examples in my last auction after having been ripped off, as to how I would respond if the buyer didn't carry through. I don't do that as a rule. I have found MOST to be genuinely honest. And that is the way it ought to be. I hope I never have to give negative feedback ever again - that one person being the exception. He got 5 negatives for same thing in a weeks time.

I appreciate my customers and "try" to be as honest in my descriptions as possible even though most items especially E-Bay items are AS IS. Without customers I have no business. I try to treat my potential and actual customers as I like to be treated. With respect. Even if they turn away and don't buy, I at least had an opportunity to meet with some interesting people. I do not force anyone to buy and I never will. That isn't right. If they ask questions I'm there to answer but I will not persuade them to buy. I HAVE persuaded some NOT to buy if I felt the item wasn't suitable for them. For example a older style set of walkie talkies with long metal antennas. A child seen them and wanted them, the mother was going to buy them. I suggested she didn't for fear of getting an eye poked out in play.......I was concerned for the safety of the child or one near him, to hell with the profit. I couldn't live with my self if he had an accident with them.

I didn't mean to ramble but just wanted to point out ANY business transaction can get tricky real fast. By complete honesty plagued with circumstances OR by actual deception. You have to look more closely at the circumstances behind it. As to E-Bay, the profile tells me a lot. NOT ALL, but a lot.

My two cents based on experiences...........

(Since alot of you guys sell ham gear on
E-Bay, I thought you may like to read this
article)

07/08 09:37 www.bloomberg.com
EBay to Buy PayPal for About
$1.5 Billion in Stock (Update2)
By Greg Wiles

San Jose, California, July 8 (Bloomberg) -- EBay Inc., the world's largest
Internet auctioneer, agreed to buy online-payment provider
PayPal Inc. for about $1.5 billion to make it easier for
users to send and receive payments on transactions.

EBay will exchange 0.39 a share for each PayPal share, the company
said in a statement. That's an 18 percent premium to
Friday's closing stock price. EBay shares fell as much as
4.4 percent in early trading.

About 60 percent of PayPal's business takes place on EBay, which
plans to phase out the company's gambling operations after
the purchase is completed. It expects about $13 million of
costs a quarter related to the acquisition for stock-based
compensation and the amortization of assets. EBay also
said that second-quarter profit and sales were higher than forecast.
``It is very clear to us that EBay and Paypal can each
help each other expand,'' Peter Thiel, Paypal founder
and chief executive, said on a conference call with analysts and investors.

Other merchants also use PayPal's e-mail system, paying a fee
on each transaction. Individual customers pay no fee to
send or receive payments via their e-mail address after
setting up an account with PayPal. The money is deducted
from their credit card or checking accounts.
It will remain as an independent brand.

Mountain View, California-based PayPal said last month
that second-quarter sales would be as much as $54 million
and profit before some costs was expected to be 8 cents
to 9 cents a share. It had first-quarter earnings of
about $1.23 million, or 2 cents, on sales of about $48.8 million.
Paypal will replace EBay's money-losing EBay Payments by
Billpoint unit, the companies said. EBay said it will phase

out Paypal's gaming business, which was projected to account for as much as 15 percent of sales, because of the regulatory issues involved with online gambling.

Shares in San Jose, California-based EBay fell $1.79 to $58.76 in early trading. They had dropped 9.5 percent this year. PayPal rose $2.56 to $22.56. PayPal was the first Internet company to go public in almost a year when sold 5.4 million shares in February. The stock had surged 54 percent since the initial public offering.

EBay's net income was about $54.3 million, or 19 cents a share, on sales of about $266 million. The company had said it expected profit of 17 cents a share on sales of $260 million to $265 million. It earned about $24.61 million, or 9 cents, on sales of $$180.9 million in the year-earlier period.

Both companies will release complete second-quarter results on June 24. EBay is forecast to earn 17 cents a share, according to the average estimate of analysts surveyed by Thomson First Call.

Source record: 41646

Igor,
What kind of scores are you looking for? Any system like this is going to be very subjective. The "scores" are there in both the ARRL and RSGB reviews of the respective rigs. You might want to spend a little time learning what those numbers mean, rather than relying on someone's biased opinion of which rig is "best".

As an example, Ed, W5EJ has told you that he isn't terribly impressed with the TS2000 and that it doesn't do anything terribly well. That is his opinion, and is probably to be expected as someone who spent $2500 on his IC-756Pro. I will tell you that my TS2000 is a fine HF rig and is in some ways better than Ed's 756Pro. I can also supply some numbers to prove my point.

From the ARRL review, the four most important receive specifications:

Receiver Noise Floor, 14 mHz, preamp off/on (IC756Pro has two preamps);
TS2000 129/137 dBm; IC756Pro 128/136/140 dBm

Blocking Dynamic Range, 14 Mhz preamp off/on (IC756Pro has two preamps);
TS2000: 126/121 dB; IC-756Pro 127/122/120 dB

Two-tone 3rd order IMD Dynamic Range, 14 mHz, preamp off/on (IC756Pro has two preamps);
TS2000: 94/92 dB; IC756Pro: 95/92/88dB

Third-order intercept, 14 mHZ, preamp off/on (IC 756Pro has two preamps);
TS2000: +19+/4.2 dB; IC756Pro: +15.4/+4.3/-6.9

So, you see there is very little difference in the two rigs' specifications. The IC756Pro has slightly better sensitivity with it's "preamp 2" engaged and the edge by 1 dB on two-tone, 3rd order IMD, with both rigs' preamps off. Unfortunately for those who have to make a choice, variance among different radios of the same make and model will be more than those differences. In fact, the variance between individual rigs of the same models can be significant, sometimes more than 5dB. For example, the ARRL lab states that the 5kHz 2 tone, 3rd order IMD dynamic range of their IC756Pro is 80 dB, but the RSGB lab tested theirs at 74 dB. Numbers are not the whole story.

I believe the TS2000 has gotten a bad rep as an HF rig because of three factors: it looks strange, it does too much (many hams still insist on thinking any rig that does many things must be a "comprimise" rig) and the ARRL's using the TS2000 as the initial rig for the inclusion of 5kHz two-tone IMD dynamic range test results. While it's true that the TS2000 lags behind many rigs, including the IC756Pro, at 5 kHz spacing, according Peter Hart's RSGB review, at 7 kHz spacing, the TS2000, at 72 dB dynamic

range, holds it own against rigs like the IC756Pro (74 dB), the IC756 (74), the IC775DSP (73 dB), the TS870 (66 dB) and many others.

So, you see, the numbers can be somewhat misleading! The rig you buy depends on what you want out of it. I traded a TS870 for my TS2000 and haven't been disappointed in the least by that decision. I chase DX and the TS2000 is as good as my TS870 was on HF, and in many way better (more functionality in the DSP system, for one), and I get the added bonus of 6m/2m/70cm allmode capability. I also get a 2m/440 dualbander thrown in! Are there better "competition class" HF only rigs out there? I'm sure there are, but I don't operate a multi/multi contesting station, so I don't miss what they offer. I've never had overload cost me a contact on this rig.

Whatever you decide, do some research, find out what all those numbers mean, and if you can, compare the rigs side by side. If you can't do that, get an idea of what's important to you as an operator see what each rig can do and base your decision on that. Don't just rely on opinions!!

Good luck on your decision,
Scott, N9AI

As I stated earlier, tho maybe it wasn't clear, I've had this problem
with 3 different year model S-10's. An 87, 92 and my present 98
model S-10. I'll probably just end up chunking the Kenwood radios
and stick with Yaesu's. I may try as one person has suggested
running an extra ground wire from the battery to the case/heat sink
of the radio and see if this has any effect on the problem..

I tried disconnecting the shield on the cable at the antenna as one
person suggested, but that did not make any difference. I really was
counting on being able to use my new Kenwood TM-D700 mobile,
but that may not happen if I can't fix this problem.

Regards,

James

You've got to start by completely isolating the radio from ALL grounds except the one to the radio's grounding wire. Set it on the seat, remove the antenna connection and everything else except the radio's power and ground leads. Make sure you have no whine with this setup. Then start connecting grounds - touch the shield of the antenna to the case, touch the case to it's mounting bracket, etc. to see what impact additional ground connections have.

Hello, I am new to both this newsgroup and radios.
I would like to purchase a shortwave radio that would allow me to
begin learning about shortwave. I spent the last hour searching for
information on radios to buy and frankly, I have no idea what features
I need and what features I don't need. Since I would like to keep the
price underneath four hundred dollars obviously my choices are
limited. But again I am an new so I do not need anything professional.
If anyone could suggest a radio, or a link to a thread with a topic
that applys I would be extreamly greatful.
Also if anyone knows of a good book as an introductry into radios or
even a website that would also be appreciated

Thank you for your help and patience.
Andrew G.

1243. For Sale: new Uniden Sportcat scanner with two headsets + extras!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-09 04:23:16 UTC
From: Erik <hofu@earthlink.net>
Message-ID: <3D2A656F.9F4F5B79@earthlink.net>
Source record: 41553

I have an auction I started last week on eBay.
My friend said it would be a good idea to let this newsgroup know about
it due to the number of enthusiasts on here.

The scanner is almost brand new. Only 1 NASCAR race & I have two just
like new headsets along with extras like a thigh holster for holding the
scanner when seated. It's a great set up.

It's eBay auction #1364752375
or click on:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1364752375

Sorry to inconvenience anyone.

1244. For sale: Icom 02AT scanner in box--cheap!

Yup!
Had some power line noise when I lived near Santa Cruz, CA.
Was bad enough to take out the picture on the TV ... on cable!

Called 'em every day until they finally came out and replaced
a bad insulator, two bad clamps, and a bad breaker ... on the
pole right outside my ham shack. Was easy to find. You could
see, smell, and hear the arcing. Only took 'em two weeks ...

FOR SALE:
New first quality terminal boards.

For those who repair and service antique
radio equipment and/or audio equipment etc. the following
will be very useful.

Top quality fiberglass terminal boards measuring
13-1/8" long by 1-1/2" wide.

These have 2 rows of turrets for mounting components
and making wiring connections. They have four mounting holes
in the corners.

They can of course be cut down into smaller sections as
needed.

Picture available - request via e-mail

Available at $5.00 each or 5 for $20.00
plus shipping

1249. Yaesu VX-7R CTCSS question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-09 11:45:49 UTC
From: frank@damato.com
Message-ID: <1276490d.0207090345.29042b83@posting.google.com>
Source record: 41559

Am I correct when I say that 2 different CTCSS tones CAN NOT be used (1 for RX and another for TX)?

The only way to have 2 different tones is RX CTCSS and TX DCS (or vice versa).

Why do you think YAESU did this? was it such a big deal to allow the radio to have 2 different CTCSS tones.

Will there be a FIX for this, or maybe a firmware upgrade in the future?

1250. FT-100D with MD-100 mic - HELP NEEDED!

Andrew,

A very good, and rather inexpensive, shortwave receiver is the Radio Shack DX-394. Radio Shack discontinued this a couple of years ago (for reasons I will never understand). However, you can still find them at swaps, and on the internet, such as Ebay.

This is a wonderful desktop receiver, with continuous coverage from 150-kHz through 30-MHz. It receives all modes, AM, FM, CW, and USB/LSB. I have two of these and really enjoy them. There are better receivers out there, with better filtering, audio, etc., but this makes a great first receiver, and it is easy to operate. I have no complaints with mine.

Just an opinion on one model ...

Also, I suggest you try these links for additional information:

Source record: 41567

I am a new member of this group with limitaded access to the WWW.

I just got a used FT-23R with the operation manual.

I can use any of the control of the top panel in order to: turn
on-off, set the volume, power level, change frequencies and squelch.
The set is working fine under those conditios because I can receive
and trassmit. However I can not use any of the front panel buttons
that means I am not able to use memories, and any other function
related to that panel. The display shows the frecuency for transmiting
and receiving but no other indication. This set has no touchtone pad.

Any help will very appreciatted.

Hi all,
Just a quick question-what frequency(s) work the best in rocky and wooded hills? We're trying to determine whether simplex 2m or 70cm would be best. The distances would be less than 5 miles but with frequent ravines. 70cm sounds promising, but more would be absorbed by trees. Any ideas?
Thanks and regards,
Woody de N5ZU . .

Answer migh be "none of the above". I read that the military was using
Near Vertical Incident Scattering (NVIS) on low HF in that kind of
situation. Ie use the sky to bounce signals over the hills.

Right. It is the same as the Sangean ats-909 but with RS labels.

> I would like one but the $250 cost is too high for a reciever only for

Watch for sales. It comes on sale for $200 every 2nd or 3rd month.
Last fall it came on sale for $150 for a couple of months and is
expected to do so again. At that price it is a nice receiver.

A book that's available in the electronics section of most national book store chains is "Passport to World Band Radio. It's about $20. Has reviews of all the popular shortwave receivers. And info on stations all over the world.

A good receiver for under $400 would be the Sony 2010. Of course, there are many more candidates...

A couple of stores that specialize in shortwave: http://www.ccrane.com/ or http://www.universal-radio.com/

I've got a few questions about DC power supplies. 1), An Astron 20a power supply indicates 16 amps continuous duty cycle, and 20 amps ICS. What is ICS? Is this the max power that occaisionally be provided in short bursts, or something similar. 2) I've got an Astron 20A, and am looking to buy a Kenwood 570D(G) transceiver, which requires 20.5 amps at peak power. Will the Astron 20a handle this? 3) What's the difference between a linear power supply such as the Astron 20a, or a switching power supply, such as the Astron SS 25?

Regards,
Van, KG4PTM

Other Yaesu handhelds have a combination of buttons which locks out
all the buttons, so nothing will change while it is carried inside a
pouch. This sure sounds like the way mine behaves when the front panel
is locked out.

Happy trails,

ICS is Intermittent Commercial Service. In your case, that means that the supply can handle 20 Amps for short periods of time but only 16 Amps continuous.

To be on the safe side you really should size the power supply somewhat larger than the peak current required. 20.5 amps from a supply rated for 20 amps ICS is too close for me. I'd use a supply with a rating of at least 25 amps and preferably 30 amps.

Linear supplies use a series regulator which dissipates the excess power as heat. A switching regulator turns on and off in order to regulate the voltage without generating the heat (because the switch is either full on or off). A switching regulator is more efficient. The downside can be that the switching supply can generate RF noise if it is not filtered and shielded well enough. I use and Astron SS-30M switching supply which generates very little noise - none that gets into my receiver unless I lay and antenna wire right on the supply.

ICS Stands for Intermittent Communications service.
You are correct that is the max power for short burst as peaks in Single Sideband Operation.
You Astron should be fine. I ran a 100 watt output HF rig for years on one.
Linear Power supplies Use the heavy Transformers to step the voltage from 120 to 13.8 Volts (after regulation)
Switching Power supply Switch at high frequencies to derive the 13.8 Volts DC, They are pretty complicated
for me to explain.
The Switching Supplies are much smaller and Much Lighter per amperage than Linear Supplies.
Switching Power Supplies use to generate a lot of RF Hash that HF receivers could hear in the past.
They now have them pretty quite. I now use Switching Supplies for my HF Rigs.

Source record: 41588

1) ICS is intermittent commercial service (versus CCS--continuous commercial service). As the term implies, it is the maximum current the supply will deliver intermittently.

2) My RS-20 has been powering my TS-440, a dual-bander, and a TNC simultaneously for many years. The only time I would expect to exceed the CCS rating would be when operating RTTY, SSTV, or some other "continuous" mode. For CW or SSB, you should have no problems using your RS-20 with your 570. If you operate continuous modes, you can always power the rig back a little.

3) A linear regulated power supply is simple and uses few parts-but several of these parts are big, heavy and expensive. The efficiency is usually only around 50%, producing lots of heat that must be removed by a big heat sink and often fans. In this switching supply the line voltage is directly rectified and filtered, which feeds a high frequency power oscillator (typically 25 kHz). This relatively high frequency allows the use of a small, lightweight and low-cost transformer. The output is then rectified and filtered. The control circuit steers the power oscillator so that it delivers just the right amount of energy needed, so that little energy is wasted.

Could someone please define "intermittent"? Is it 1 second, 5 seconds or a minute at a time? Or is it more complex - like 5 seconds out of each minute of operation? Is it similar to the term "duty cycle" that one occasionally sees on a Tx spec-sheet?

Intermittent is random and not predictable
Duty cycle is predictable and repeatable.

I have seen the term intermittant service used on a data sheet.
This probably meant some sort of low (poorly defined) duty cycle.
I believe the term ICS (intermittant commercial service) may have had
some defined meaning. It should have referred to a maximum use time
followed by time to cool off. As opposed to CCS (continuous Commercial
service). Ham transmitters are used in intermittant use at max rating
but are often not suitable for continuous use at that rating.

I hope this helps or give a lead on what to look up.

the TS-570's internal tuner is designed to tune an antenna from 3-1 swr on down anything more and you will need a tuner external to the radio. I use an old MFJ tuner to tune my 75M whip and it works fine. You don't need to do anything but press a button to disable the internal tuner.

Hello

We have on display at the Muckleburgh Collection a Marconi CNY1 TX/RX, it is obviously naval but despite all our efforts we cannot find much information on it. The only scrap of detail we have is it was possibly used on Assault Landing craft, but have no evidence to prove this!

We would like get some concrete information on this and if we can find the manual, service sheet etc. get it back working again.

Surely somebody out there has one or do we have the only one ever made??

TIA:

I have just picked up a National NC-2-40S receiver.

It is a rack version and I notice that in Ostermans book, the 40C and the 40 D are mentioned. The set I have has the centre circular dial as on the C but the square S meter of the D. Also, my set has only one phone jack, lower left, the righ bottom corner has a small chart holder. So, was the S version a military one ?

If anyone can help with the circuit diagram I would be most obliged.

cheers, Ben G4BXD.

Yes, it is similar to duty cycle. Not sure if each company specifies their own standard or if it is an 'industry wide' standard.

Old RCA manual states :

ICAS (intermittent comercial and amateur service) of an ON (transmitt0 period not to exceed 5 minutes each and off or stand by period of the same or greater duration.

IMS (intermittent mobile service) transmitter on 15 seconds and off for atleast 60 seconds.

You may very well get away with running a rig specified at 20.5 amps peak from a supply rated for 20 amps ICS. First, the rig may not actually draw 20.5 amps peak on all bands. Most likely it will draw more current on 10 meters than it will on 75 meters for the same power output. If you do draw 20.5 amps from the supply, what the supply does will depend upon its design. If it had a 20 amp fold-back limiter, for example, you may find the output voltage dropping on peaks. How the rig reacts to the sagging voltage depends on the design of the rig. IMHO, good engineering practice would be to always use a supply rated above the anticipated peak load. That way you don't have to guess at what might happen.

i would not consider the ict81a, its too cumbersome to try to program any way but with a computer. had one i know. most of us dont carry one around with us.

Hello

I would like to use a TS-850S with the computer for logging so that it sends the frequency and mode automatically.

Unlike the newer Kenwood radios the 850 does not have a 9pin com port socket on the back. How can this be done with the sockets on the radio please, is there a wiring diagram on the internet that will show what is needed??

TIA

Richard

Hello All,

Can anyone share any wisdom, thoughts or pointers on these controller choices for our local RACES group. I'm leaning towards the Pacific Research RI-300e for its built in dsp squelch, tone decoder and "soft pots" not to mention I've heard the audio is stellar on these units. I'm also considering the Link Communications RLC-Club deluxe. Its built in DVR looks nice, though limited, and the GUI looks a bit more intuitive.
The controller will be interfaced to a brand new VHF Motorola MTR-2000 that I'm going to turn it over to the local RACES group after the fact so I'd like it to be as "plug-and-play" as possible.

Again, any comments would be appreciated.

Thanks,
Sean

I puchased the Programming Cable for the Kenwood TH-F6 (Model Number PG-4P). Downloaded the PG-4P Program (no help menu). First Problem was the connector didn't fit any of my Computer Spickets, so stumbled across that a DB25 to DB9 adapter was needed. So bought one. Set menu item 9 to PC. But I only get a timeout when reading or writing data.

Anyone have this can help??

Hi James,
I have a Chevy S-10 and Use a Kenwood D-700A and have no Alternator Whine or Hum on Receive or Transmit. I had a Yaesu 8100 before this Kenwood and I had whine when I first installed the radio. I then isolated the chassis of the radio from the mounting bracket, which was grounded through the screws to the body of my truck. That really lowered this whine, but I still had some whine. I then installed the filter from Radioshack and that helped somemore. I still had some whine from time to time with the Yaesu. I guess when the alternator was working harder I would hear the noise a little more. When I got the Kenwood D700a I no longer had any alternator noise at all.
I am not sure what is different on your installation, but you might want to try the two things I did. My antenna is a Larsen mounted on my toolbox.

Hope you get if figured out

Jason

I can't speak for the VX-7R but I can say that I've been disappointed in my TH-F6. After owning it for two months the B band stopped receiving completely. In all fairness I must say that Kenwood did repair the radio and they returned it to me in less than two weeks.

However, just recently I attended an air show and intended to use the HT for monitoring the aircraft at the show. The area was fairly RF-dense. The first thing I noticed was that the rig was virtually unusable due to intermod on the 440 Mhz band as I tried to QSO with someone else on a repeater that was literally line-of-sight from my location. I encountered another ham at the show who had a Yaesu VX-5. Not only did his radio not appear to be affected by the intermod problem I noticed on my radio, he could also copy aircraft transmissions from several miles away. I could not copy the aircraft until they were within two or three miles of our site. I also noticed that the sensitivity on the military frequencies was quite low.

Also, if you intend to use the radio to monitor HF, please be aware that the radio is nearly deaf between 1500 KHz and the bottom of the FM broadcast band. This anomaly is partially due to the poor antenna (rubber duck) but even with a long wire antenna reception is still marginal.

Again, I can't advise about the VX-7 but I can say that the F6A has been a disappointment to me. As with so many things, YMMV.

Uniden HR 2600 Amateur Radio. It has had the microprocessor replaced and now works on 10 and 12 meters. (You must have a valid amateur radio operator license to transmit with this radio.) Please email me for information on modifications. I recently had the final transistors replaced by a professional technician. He also tuned it up and made sure it was in good operating condition. It puts out a solid 10 watts on AM and FM and around 40 watts on sideband.

It will transmit and receive from 10 to 12 meters on CW, USB, LSB, AM, and FM. There are 4 separate bands with memories and will do split operation for 10 meter FM repeater operation.

Comes with the original hand microphone (UP/DOWN) in good shape, DC power cord, original operating manual and ChipSwitch manual.

Disclaimer: A previous owner has installed inch high "legs" on the front edge of the bottom of the radio. Also, the original connector in the back has been altered by adding a toggle switch for internal/accessory speaker and RCA jacks. There is no mobile mounting bracket. Due to the type of equipment and age, it is being sold "AS IS" but not DOA.

$250 shipped , insured, to US address. I accept Pay-Pal or money orders only. Please email me for additional info or photos.

Mark

The ICOM T7H is an awesome dualband HT that will work well inside of a vehicle if you use an external 5/8's wave mag mount antenna, and power it with the available cig. lighter cord.
I used this arrangement for the first year of licensure, and it worked well for me. Ranged up to 30-40 miles on a really good day, and around 20 or so, on the average day.

> offshore 1000km -2000km.

Can you say more about this?
What kind of data do you want to transfer?

> I like to have data high transfer as much as possible.
> I need suggestion to choose transceiver(yaesu , icom ,.....), modem
> (scs pactor III.,,), and antenna for this configuration

Modem:
The modem or the programm should be able to control the transceiver
via the transceiver's control port, because of the use of the
best frequency for the actual shortwave propagation condition.
For this the scs - ptc2pro modem is a good choice.
The maximal throughput for this modem is about 2000-2700 bits
per second in Pactor III at best condition.
For more info see www.scs-ptc.com .

One alternative product is a military modem.
They can handle datarates to 19200 bps, but I don't know how much
bandwidth those modems need.
Try http://www.rfcomm.harris.com for more info.

Second alternative product is a modem from hal communication:
Try http://www.halcomm.com for more info.

Trx:
For Pactor 3 I use a Kenwood ts870. It work's great with Pactor.
A Yaesu ft 817 is also ok, but has only 5 Watt HF output.
One or some Icom Transceiver(s) have a slow send - receive switching.
So they do not work well on Pactor without modifications.

Antenna:
It depends on the place on the ship and on the place offshore. But i
think a matched random wire
does a got job. You can also try a wire - Antenna (i. e. dipol).
The antenna must cover serveral bands to cope with different
shortwave propagation conditions.

1323. Atari Portfolio RS-232 Needed

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-11 13:56:41 UTC
From: Lawrence Anderson <w6lar@cybertime.net>
Message-ID: <3D2D8E99.BB8BDCC@cybertime.net>
Source record: 41533

I know this is not radio but I want to use an old Atari Portfolio Hand Held computer for a packet radio terminal. I have the Portfolio but I need an RS-232 Serial Port card adapter that was an option for this unit. Any chance you have one that you don't use I will pay a fair price for one.

Thanks for reading and respond to w6lar@arrl.net

1331. Need opinions on FT-817 accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-11 20:34:29 UTC
From: k5dh@raytheon.com
Message-ID: <pZIX8.1083$Bd4.8309@dfw-service2.ext.raytheon.com>
Source record: 41542

Greetings, FT-817 owners!

I just bought a used Yaesu FT-817 with Maha NiMH pack, LDG Z-11 ATU, and a Maldol 20m telescoping antenna. I intend to take the rig portable (at fixed locations rather than backpacking). I'm looking for opinions on protective carrying cases, portable antennas for mainly 40m through 10m use, and other useful accessories. I want to hear about your personal experiences, not just hearsay. Please share your opinions on why you like or dislike the items that you've personally tried. I'd also like to hear what other accessories you've found useful, and have you home-brewed any neat accessories? I will be using SSB and CW only on HF, and FM only on VHF, so there is no need to hear about packet, digital, or PSK31 goodies. I also won't be using a computer, so there's no need to hear about computer-related stuffe.

Please email me (k5dh@qsl.net) as I don't get to read the newsgroup as often as I'd like these days. It wouldn't hurt to post your responses here also, so that others might benefit from your experiences.

Thanks and 73/72!
Dean, K5DH

1332. Waters Mfg - mobile ant "Model 370-xx"

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-11 20:48:14 UTC
From: Allodoxaphobia <QSB@QRM-QRN.net>
Message-ID: <slrnairroc.lko.QSB@animas.frontier.net>
Source record: 41543

Does anyone have any printed info on these mobile antennas
top sections? The (old, fadded, scuffed) labels read
Waters Mfg Model 370-xx "Auto Match"
Where: -xx is 10, 15, 20, 40, 75 for the
band in question.

I know that Bob Waters sold his company to Barker and Williamson
a couple of hundred years ago. And, Bob Waters, himself, is a SK.
These came out of my dad's 'stuff' (The original W3DHJ and now a
SK, too.) My dad was a good friend of Bob Waters back in the
1950's and 1960's, and I believe these antenna sections date from
back then -- maybe the mid-60's.

I, myself, have never been much of a mobile operator. But, I want
to get serious now -- and, I'd like to put these (beautifully
built) Olde Tymers back into service.

TIA es 73

FS: Ameritron QSK-5 Solid State T/R Switch. External standalone model with manual. I bought it secondhand to use with a qsk rig that I ended up not purchasing. I never tried it out, but was told it works fine. The case has some marks, internal components look fine, no overheating etc. New price is $330, I will sell it as-is for $150 shipped conus Thanks
Tim

Hi

I have an ic-2710h, and have been listening to the air band with it. I have a question though, Has anyone noticed when reciveing a CONTROL Tower, or Ground support, that the audio is not very loud, but when receiving an aircraft, the audio is just fine, loud enough to copy, without haveing to crank the volume way up. I am experienceing this, and wonder if others may have had the same problem?

When i listen to air with my HT, I don't have the same problem.

Zach

You might want to watch this gentleman carefully. I purchased a Yaesu FT-100D from him through
Ebay. It was to include one of his custom made cases for the radio. In any event, the radio was sent more than three weeks after he received certified funds from me. There was no case. I called and was promised that one would be sent immediately. That was months ago. No case, no response to my several phone calls, no confidence that he is a person of his word.

have battery, antenna, and standard charger. $75.00 each

GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can program these to the ham band. With battery, Antenna, and Charger. $85.00 each. Have 3 of these.

GE MPS VHF Like new 12 channel. With new battery, new antenna, and a standard charger. $70.00

GE MPS VHF 12 channel. 8.5 condition. New antennas and NOS batteries Standard charger. $60.00 each have 2.

SALE!

GE MPS UHF 48 channel. 8 = 8.5 condition, These have NOS batteries And have 4 banks of 12 channels. These can go to the ham band. I have been Using one of these on my ham repeater and it works great. $60.00 each I have 8 of these. Programming on 12 channels included.

GE UHF MPS 8 channel with 8 different tones. 8 different tones can be Selected for each different channel. Battery and antenna. $50.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1 good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I sold this radio a year ago but have taken it on trade. Condition 8 with belt clip and charger. I had this radio run for stolen from CSX by a local CSX Special Agent when I first bought these in a lot and was told that it had been sold at salvage. Perfect for a RR Museum or shortline on a budget. This could also be programmed for marine frequencies. Like new tall Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms. $100.00

GE MVS 800 conventional 2 channel. Without mic tested OK $45.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240 450. - 470 Looks good. $125.00

GE Mastr II UHF 75 watt with preamp. No Icoms drawer only.

MC65KKG88B $90.00 each only 2 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A

With 1 set of Icoms $45.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33

With 2 sets of Icoms. $10,00 each. I have many.

GE Mastr Pro 110 watt lowband 42-50 split in a wall mount cabinet

With a power supply for a base. $35.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00

each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr

II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that

I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Just in not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.

16 channel model has short cable and some handle bar mounts. Mic

included but no speaker. Not tested yet since I just got it in.

$50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit

charges your battery and turns your portable into a mobile radio.

(Convert a Com) With mic, speaker, and power cable. $90.00

GE Accessories

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen

programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5.

$4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and

162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50

each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820

heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a

rapid rack charger with a DB 15 cable and uses a MPD body to attach a

battery to. Has LED readout in display area of MPD body to tell

discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card

and power supply / speaker. $300.00

Other Radios and Accessories

Motorola Saber III Secure VHF 146 split 120 channel radio. Alphanumeric

Display. Has Battery Smart charger and speaker mic. I have been using this
on the VHF ham band. Has a new case that was installed at the Motorola

Rockford, IL Depot

So it also has a new model sticker that they put on as well. Nice 9.5 or better radio.

$450.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great.

This was in my van before I added another MVS so I know it works.

$95.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery charger but I will split up the pair if someone wants 1 radio only. 6 channels programmed for 10 meter ham band on 2 repeater pair and 4 simplex frequencies. 2 radios and 1 charger $175.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola Saber II UHF 48 channel scan. With battery and antenna.

9 condition $350.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-

Numeric head. $225.00

Want List not FS

Extra parts for GE suitcase programmers Data modules, Printers, cables,

proms, Anything you have extra. MPA or MPD portables what do you

have and what do you want for them? Johnson scorpion program cable.

Terms

All prices are plus shipping from 40201. All items are used unless

noted and only have a no DOA warranty if I say it works. If I say

not tested your on your own. If I think it may be bad I will not list

it. I take cash, Postal Money Orders, Paypal, and checks but I hold

them for up to two weeks to clear before I ship. If you have a

question E-mail me. Contact me off list at. Gundoc@insightbb.com

1342. Re: Need opinions on FT-817 accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-12 03:51:29 UTC
From: "Ed G." <Spectrumhog@_REMOVE_StarBand.net>
Message-ID: <Xns9248D49FEAA04Frog207Junocom@148.78.248.76>
Source record: 41403

Your projected usage for the FT817 is similar to mine, portable fixed, rather than pedestrian mobile. Given that, I'd recommend obtaining a nice telescopic fibreglass antenna pole and set up a nice inverted V for 40 M. Also, I'd recommend you get a little tuner and then just tune that antenna for 40 M and on up. You'll find the antenna is your most limiting feature and the Inverted V would run rings around any of the little portable whips for the FT817.

Steve- your case will be on the way. We ended up getting another batch made because we ran short after the SeaPac Ham Convention, we sold more than expected. (As you were told and accepted! I FORGOT! to send the case.,)
Apparently you don't have the BALLS to email direct and tell me you wondered what happened? Then there was a shop phone YOU could have called as well. I even sent you the radio FedEx 2 day shipping at MY expense!! I DID NOT promise this in the auction.
We should have more cases in shortly, along with all the other models we are waiting for, you are on the list. As far as communication, I could do better, But then, so could you. You forget to mention that your check came 2 1/2 weeks after the ebay 7 day pay end, and yet I had to call you twice. I still held the radio for you. Why should I waste another quarter after calling you twice? It never really seemed that important to you to even pay on time. Or did you bid, then save up for the money? Did you get a radio that did not work or was in bad cond.? No! you did not. You say "no response to my several phone calls"?? You talked to Teresa the first of June and she explained as we were on the way to SeaPac and she would send it as soon as she could! You made no attempt to call otherwise, we have voice mail.
But you still shoot your mouth off in public with half the story!!!
ill be leaving you negative feedback as well when I have more time. Enjoy the radio and case!, when you get it! (in the next 3 weeks!)
Steve! don't DICK with me! You are a small man. Flame me, I flame you..... I have far more internet resources than you! END IT HERE!

People, please review the feedback of Thunderbird2 on ebay.......... You decide.

Hello Rich, Wow, touched a nerve here. Glad you are sending the case. You must have not recalled the several messages I left on your voice mail. How long has it been since your wife made that promise? You mentioned the first of June.

I had also e mailed you asking about the status of the radio with no response so did not e mail you again about the mission case.

You are correct however in that you did ship the radio FedEx 2 day when it was sent. Thanks for that.

As to your threats, I think it enough for others to hear your response and make their own conclusions.

There's no threats here Steve. I try to be direct rather than back stabbing. You touched my nerve here. You admit to talking to Teresa the first of June. Yet you said: "I called and was promised that one would be sent immediately. That was months ago. No case, no response to my several phone calls" JUNE is not "months ago" Teresa told you she would send one out just as soon as she can, you were told we were moving to a new home and we were on the way to the Hamfest! THIS IS JULY! Its not been "Months", You have not contacted us to check on it, you did not email me. No, you did NOT leave several messages on the voice mail. you did however finally call me back and told me you were finally sending the check after I called you and left a message twice. Perhaps I need to watch for your posts and auctions and post/email my exaggerated feedback's on the spot as well? Thats not my nature, but we both really need to leave it where its at.
Rich

I recently bought this radio and the light on the readout didn't work so
I guessed the light was burnt out and I pulled the radio apart and
cannot find any sign of a light ever being there. Can any one tell me
was the light made into the display or was it not lighted or what. I
would appreciate any E-Mails from any one who knows more about this
radio help.
Thanks alot and God Bless David

1348. Re: Need opinions on FT-817 accessories

Newsgroup: rec.radio.amateur.equipment

"K5DH" <k5dh@raytheon.com> ...
: Greetings, FT-817 owners!
:
: I just bought a used Yaesu FT-817 with Maha NiMH pack,
: LDG Z-11 ATU, and a Maldol 20m telescoping antenna. I
: intend to take the rig portable (at fixed locations
: rather than backpacking). I'm looking for opinions on
: protective carrying cases, portable antennas for mainly
: 40m through 10m use, and other useful accessories. I
: want to hear about your personal experiences, not just
: hearsay. Please share your opinions on why you like or
: dislike the items that you've personally tried. I'd
: also like to hear what other accessories you've found
: useful, and have you home-brewed any neat accessories?
: I will be using SSB and CW only on HF, and FM only on
: VHF, so there is no need to hear about packet, digital,
: or PSK31 goodies. I also won't be using a computer, so
: there's no need to hear about computer-related stuffe.
:
: Please email me (k5dh@qsl.net) as I don't get to read
: the newsgroup as often as I'd like these days. It
: wouldn't hurt to post your responses here also, so
: that others might benefit from your experiences.
:
: Thanks and 73/72!
: Dean, K5DH

http://www.mountainops.com/
These are very good folks. Their packs are
being used by the FBI and other groups. In
fact the FBI used FT-817 in NYC as they lost
their repeater on top of the WTC.

http://www.amateuraccessories.com/
Steve has a very good operation as well.

Zach,

There is no "problem" with the radio. UHF and VHF are pretty much line of sight. The aircraft and tower are in line of sight of each other just as you are in line of sight with the aircraft. The tower (and gc) are at the airport. The antennas are normally on the tower or nearby on the airport gounds and are rarely more that 50 feet high. The aircaft you are listening to are 1000's of feet up.

Hi there,
I am looking to buy a dual band mobile radio but am torn on which one to buy?..the 3 I am considering are..

Yaesu FT-7100
Icom IC-207
Kenwood TH-G707

I have read some reviews but still have not come up with any descision...hopefully more info will help, I am a new ham so I do not want anything two fancy and confusing, I have a Yaesu VX-5 so am fairly familiar with the Yaesu line. I was thinking of getting the FT-7100 but heard there were lots of problems with the early models beginning with the serial number 1### does anyone have a FT-7100 2#### with problems?..
They are also on sale at the moment so its a hard descision.
I do like the wide band recieve, removable face,dual recieve.
I guess the Kenwood 707 be be my second pic so far???
Any ideas or opinions would greatly be appreciated!
Please reply to me directly as I do not always check the NG's...
Thanks-Russ rusty@dccnet.com

Russ
I had the older Yaesu FT-8100 and got rid of that piece of JUNK
and replaced it with the Kenwood TM-G707A. It's a LOT
BETTER radio, lots of bells and whistles, but it just won't
cross-band repeat. Oh well you can't have everything, first
of all where would you store it? ;^)

Source record: 41420

I have the 455khz and 8mhz IF CW filters built by Inrad (International
Radio) for the Kenwood TS-940, TS-440, and others.
They are both the the 400HZ filters and are of much better
quality than the Kenwood filters. $120 takes both. These were
sold but the buyer never came through.

I love my Kenwood TM-G707. I have three of them. Some perks, they're easy to modify for extended Rx, plus, I think, Kenwood has the best "menu" system of the big three. Easy to use and pretty intuitive. I really like Yaesu radios too, but find their menu's much harder to learn. Icom I'm not that familiar with.

I guess I'm in the minority, but i have one of the early FT-7100 and
have not really had any problems with it. Intermod seems a little
worse on it than other brands, but Yaesu has a fix for that and
before my warranty runs out I'll be returning mine to get those mods.
I understand from some hams that Yaesu is replacing some of
the s/n 1xxxxxx radios with s/n 2xxxxx when they are returned for
repair instead of fixing them. I also have an FT-3000 which I
like very much. Yaesu makes good radios but seem to have
had a quality problem with some that were made last year.
If you decide to get the FT-7100, try to get a 2xxxxx s/n.
Yaesu and most of the dealers say the later s/n 2xxxxx radios
have been fixed.

Hello Russell......

I purchased a late model 2xxxxx Yaesu FT-7100 at Dayton this year (show special for $235.00, couldn't pass that one up hi hi). I have been using it as a portable-mobile and have had no problems so far. The out-of-band mod was rather simple and it is a very easy radio to operate. The audio on my rig seems a little hot, but there is a deviation reducer in the main menu, that helps with that little problem.

73,

Chris

1365. Loose antenna cover on ducky

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-12 23:20:12 UTC
From: cprstn54zz@att.net
Message-ID: <3d2f635b.133077031@news-server.optonline.net>
Source record: 41427

The rubber cover or sheath on the ducky that came with my brand new
Yaesu VR-120 wideband RX rotates rather freely on the antenna itself
-- which makes removing this BNC item a little difficult.

Is there a good quick fix? Or should I just get a warranty
replacement?

ken:

1) are you sure it's the cover that is rotating? on my radio, the entire flexible part of the antenna will rotate in the bnc connector...

2) when you are removing or putting on the antenna DO NOT twist the flexible part with the rubber covering... turn only the metal base of the antenna... the connector, and not the antenna portion... it will last much longer this way.

good luck... bob wb2aiu

I have a TPL PA1-10 D commercial FM Amplifier, rated 80 watts for 35 to 50 Mhz, that I would like to modify for use on SSB on 6 meters. The amplifier works well with my FT-736 in FM mode, and can give me as much as 75 or 80 watts there. My real intrest on 6 meters is SSB, so any information on modifications for running SSB would be helpful.

Well, I'd suggest a little glue, like SuperGlue Gel. I had the same problem with the antenna on my Alinco DJ-195 h/t. I separated the cover from the BNC connector by slipping a toothpick in between them, then squirted a little glue in. Held for over a year before having to redo it. Sure is faster than warranty replacement.

For occasional use, get the one with the most features for the least
price. If you get serious or you think that you might, then I would go
along with Icom suggestion.

What about the Icom IC-T81A specifically. Although discontinued, there are still a few around.

1403. IC-271A Question - setting tones

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-14 03:31:26 UTC
From: Chris Anton <canton@mail.island.net>
Message-ID: <ig6Y8.35200$BD1.2629902@news1.calgary.shaw.ca>
Source record: 41464

I've recently picked up an Icom IC-271A 2m all mode which is in beautiful shape but came with no documentation. A really lovely radio but I have a question which I'm some sure someone on the list knows. There is a Tone button which turns tone on and off and a Sel button which I believe allows me to select the tone. Pushing the Sel button display numbers from 01 to 63 which can be selected by turning the main tuning knob. Are these numbers indicating the different tones? Can anyone point me to where I can find out what tone is associated with which number?

Of course I could be totally off base about what Sel button does. If anyone knows I'd appreciate some pointers.

thanks
Chris Anton

I have used my yaesu cable (ft-50, ft-90, and others with adaptors) with
my icom F21 and it works wonderfully.
Easiest way I found to do this was to check rtsars.com and cross reference
the cables they sell there.

I have an ICOM 746 HF rig 10-160 meters which also covers the 2 meter and 6 meter bands. This was bought new in Dec. 2001 and its a late model with serial #86xx. I have the original box, manual and ICOM hand microphone. This rig is a 9.9 out of 10... I could say its mint, but I took it out of the box. This is from a non-smoker and its in 100% operating condition. I will take $900 plus shipping in the 48 states only. WZ1U Steve / Lakeville, Mass.

1411. VX-5R and AA rechargeable lithium?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-14 16:44:28 UTC
From: cprstn54zz@att.net
Message-ID: <3d31a893.281869984@news-server.optonline.net>
Source record: 41472

Anyone tried the rechageable AA lithium batteries (@ 3.6 volts apiece)
in their VX-5R via the FBA-23 battery holder?

See: http://vss-electronics.com/laa.html

It looks to me that the radio can't tell the difference between the
stock lithium pack (7.2 volts), an FBA-23 with alkalines (3 volts) or
an FBA-23 with AA rechargeable lithiums (7.2 volts). It simply
adjusts output power based on the voltage it sees: 5 watts for 7.2
volts and .3 watts for 3 volts.

These rechargeable lithiums at $6 per set are a lot cheaper than the
stock lithium pack at $65.

Anyone know the capacity of these Lithium AA rechargeables?
Hopefully, they would give at least 60% of the stock pack (1100 MAH) -
based on physical size.

The lithium batteries I found listed at the above web site are primary batteries which are not rechargeable. Rechargables are secondary batteries.

Still, since lithium primary batteries usually are very high capacity the idea is good, especially for long term stand by use. Lithium batteries typically have very low internal leakage and do not self discharge like nicad and nimh. Their low weight is also excellent for for backpackers.

It would be nice to find the specs of the listed batteries, the price seems right.

1414. Power mod for TS-570

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-14 17:59:59 UTC
From: Administrator <administrator@telefonica.net>
Message-ID: <z_iY8.357059$bv6.3009706@telenews.teleline.es>
Source record: 41475
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb

Hi all,

My TS-570 only puts out appx. 60W on SSB. On CW it's exactly 100W.

I want some more power from the rig. How do i do that? In the TS-50, 450 and 850 there is a VR15 that i can adjust. How is this done in the 570?

Thanks,

Administrator.

>>and a Yaesu VX-7R. Of the two, which would you choose and why?
>

I've had both, (currently the Kenwood). The yaesu if a fine radio, built like a brick S***house. The buttons are very "slightly" bigger than the Kenwoods, too. On the negative, the menu system is more difficult to learn/operate.

The Kenwood has the nice SSB Rx mode and covers all the HF spectrum, which is one of the reasons I traded the Yaesu in for it. The battery is bigger, too. The menu system is so self-intuitive that I rarely have to refer to the manual, like I did with the Kenwood. On the negative, I find the volume control all to easy to accidently turn when you're turning the mode switch on top. Also, the buttons are a bit smaller, for those of you with big hands. Additionally, the Yaesu is a bit easier to "modify" if you want extended coverage.

Yes, you are right. When I searched further I could not find any
rechargeable Li-ion batteries in size AA, except I did find one
statement that they did not readliy lend themselves to size AA. They
are the right voltage, however, and I was confused by the "Again &
Again" brand name.

I have emailed two vendors for the battery's capacity. Even as
non-rechargeables, they are way better for this radio than alkalines
if they permit 5 watt output (vs. 0.3 for alkalines).

Of course, you could always use an external battery holder for 8 NiMH
AA's (or alkalines for that matter) and run that into the external DC
jack -- making the radio think it is coming from your car. The holder
is bigger than the radio, but is a lot smaller than a car!

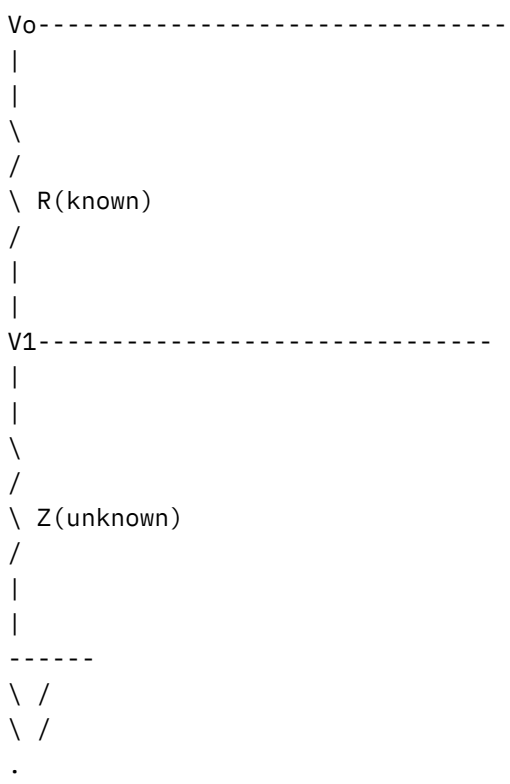
1417. Re: How to Measure RF Impedance?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-14 20:29:09 UTC
From: davearea51@aol.com
Message-ID: <20020714162909.12874.00000435@mb-cn.aol.com>
Source record: 41478

Steve:

Two instruments are needed:
1) A generator of the frequency in which you are interested and
2) An 'scope or some other method of measuring RF volttages:
With the setup diagrammed below:



Measure both V0 and V1 and R(known). Then, |Z(unknown)| is:

Z(unknown) = V1*R(known) / (Vo - V1)

This method will, of course, not give the sign of Z(unknown), but hopfully you know beforehand whether it is inductive or capacitive. The above can be derived by simple application of Ohm's Law. For frequencies above HF use leadless components!

Source record: 41486

>IVE HAD A BAD ONE FOR 11 YEARS AND THEY STILL REFUSE TO FIX IT

I've heard this works:

Call them and tell them you THINK you saw sparks and fire on the pole,
and there was smoke too. Ask if they think the sparks landing on the
ground might set one of those fires like in Arizona and California.
Tell them you sure hope when the grass is set on fire the fire doesn't
get to your house, cause you sure don't want your house to burn up.
And remind them you have small kids in the house, and oh, yeah your
brother is a lawyer..... by this time you should be hearing sirens
and the power truck should be out by the pole.

On the other hand, if you play the beaurocracy game with them I've
heard the front office can keep you dragging on for years.

1426. SM0VPO Homepages Update

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-15 08:40:42 UTC
From: Harry SM0VPO <someone@microsoft.com>
Message-ID: <agu2pl$h5v$1@newstoo.ericsson.se>
Source record: 41487

Hi all,

It's been quite a few months since I last posted anything here, in fact it is about a year ago. Harry's Homebrew homepages is now located at http://w1.859.telia.com/~u85920178/ where there are no banners to slow down the traffic. There are no outages due to excessive traffic since there is no bandwidth limit. It is just a bloody dificult URL to remember!

During the past year, I have been hounded by demands for payment to "freeservers.com" (or should that be "FEEservers"?) so I have moved the page http://sm0vpo.8m.com to http://w1.859.telia.com/~u85920178. Some of you may be aware that PMP3.NET was hacked and eventually closed down due to the misuse. This took away my free homepages that were kindly hosted by PMP3.NET.

There is a new messageboard too, also without banners. A new FAQ (Frequently Asked Questions) and FASQ (Frequently Asked Silly Questions). All the old ones have been kept, but some new ones have been added, Eg: "How many volts do I need to kill someone?". During the past 12 months, Harry's Homebrew homepages (http://w1.859.telia.com/~u85920178/) has had quite a few additions. Some of the latest project examples include:

EPROM AF Generator (still under construction).
WAV to EPROM conversion.
Many synthesiser projects.
DC-DC voltage converters.
150mW FM TX (88MHz - 108MHz) (technique Ok for 145MHz).
Synthesised FM TX (88MHz - 108MHz) (technique Ok for 145MHz).
Antenna Z bridge for Spectrum Analyser.
Antenna Questions & Answers (Eg: "Size isn't everything!").

H.H.H. now has just three sites, but no mirror sites. they are all located at:

PROJECTS - http://w1.859.telia.com/~u85920178
Unlimited bandwidth, Full site, No advertising, SWE

VISITORS CIRCUITS - http://hem.spray.se/lythall
Selected visitors submitted circuits - SWE

PDF LIBRARY - http://hem.passagen.se/sm0vpo
Unlimited bandwidth, Full site, SWE

So perhaps I may have the pleasure of a visit from you. Whatever you do, have fun with antennas, homebrew, radio and electronics in general. Very best regards from Harry Lythall - SM0VPO

I have a mint condition Icom 738 I would like to trade for a Kenwood TS450/690S with tuner. Radio is a 9/10, has one small scratch on top cover about 1/4" long. Can easily be painted. Cover was opened to replace meter lamp. Comes with original box, manual, and power cord. Sorry, I no longer have the original mic.

Frequency Coverage:
Receive: 500 kHz - 29.995

Transmit:
1.800 - 1.99999 MHz
3.500 - 4.000 MHz
7.000 - 7.300 MHz
10.100 - 10.150 MHz
14.000 - 14.350 MHz
18.068 - 18.168 MHz
21.000 - 21.450 MHz
24.890 - 24.990 MHz
28.000 - 29.700 MHz

Mode: SSB, CW, AM, FM
Number of memory channels: 101 (89 regular, 10 split, 2 scan edges)
Output power: SSB, CW, FM: 5 - 100 W AM: 4 - 40 W
Antenna Tuner Matching impedance range: 16.7 - 150 ohms unbalanced (Less than VSWR 3:1)
Minimum operating input power: 8 W
Waiting time for band changing: Less than 3 seconds
Tuning accuracy: VSWR 1.5:5 or less
Insertion loss (after tuning): Less than 1.0 dB

Hi all,

My TS-570 is only putting out 60W on SSB. I want it to be appx. 100W. I know how to do that on a TS-50, 450 and 850, but for the 570 i seem to have to go in a service menu and change it there.

Does anyone know how to do this? How to get in this menu and what settings to change?

Thanks a mountain,

Ton.

Follow-ups trimmed to rec.radio.amateur.equipment

The radio is probably performing exactly as it is supposed to.

What is in question is how you are doing the power measurement.
To see what your radio is doing in power output in SSB you need
some kind of peak reading meter. If you are not using a peak
reading meter then what you are seeing is completely normal.

Normally, the power generated in a constant carrier mode such
as CW, AM, FM or RTTY represents the peak envelope power
of your transmitter. The problem comes in when we try to measure
that power. Most inexpensive meters cannot measure PEP accurately.
Many expensive meters can't measure PEP well either! As long as the
radio can generate the normal 100 watts or so, you can usually
assume that it also gets about that in SSB service.

Tweaking pots on the radio to get a few more watts out is
wasted effort. The radio may indeed get a few more watts out
but the extra wattage will not be noticeable to the hams on
the other end of your conversation, believe me! The tweaking
will probably also stress components beyond their design
limits, resulting in a dead radio further down the line.

Most radios in Amateur service have been carefully
designed to work well at the 100 watt level. If your
radio is actually not developing its designed RF output
then it would be a candidate for the repair shop, not
simply a tweak job.

Do yourself a favor. If you are actually in doubt about
the amount of RF your rig is making, borrow a dummy
load and a good peak-reading meter and see what your
rig is REALLY producing. Until you do that you're just
guessing.

Gary, WG7X

PS: Since I note that you also directed your inquiry
to rec.radio.cb I've really got to question your
reasons for this mod/tweak. Tweaking radios

beyond their design limits is a big cb'er trick.
Answer honestly now, are you a cb'er? Even
if you are, the answer is still the same. The end
result is no noticeable increase in "talk power"
(cb term) and a notable DECREASE in
equipment reliability.

Your choice...

1) Push the button marked "PWR"
2) Turn the "MULTI" control to select the desired level.

Couldn't be simpler.
Dave

1446. VX-7R, D.C. current with 1 watt output power

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-16 00:44:22 UTC
From: n1kk@netzero.net
Message-ID: <d7adbb57.0207151644.5f61ef51@posting.google.com>
Source record: 41357

I measured the D.C. current at 6m,2m,222MHz, and 449MHz
with a output power of 1 watt.

I was curious if 222MHz at 1 watt output might draw something
much higher than the other bands at the same power levels.
The 1 watt was set using the Alignment Menu.

52.29 - 0.518 amps
145.58 - 0.624 amps
222.32 - 0.845 amps
444.5 - 0.824 amps

The VX-7R did get warm. I don't know if it had
anything to do with transmitting 1 watt at 222.32MHz
or not.

At 5 watts I measured the D.C. current
for 6m,2m and 445.5MHz

52.29 - 1.34 amps
145.58 - 1.42 amps
444.5 - 1.71 amps

My local electronics store was able to find some, Tom. Have you tried electronics mail order places like Mouser (www.mouser.com) or Digi-Key (www.digikey.com)? Mouser had the plugs at one time (item #171-7435). They also had inline jacks (item #161-6435) and panel mount jacks (item #161-5435). It's been a while, so those item numbers may have changed.

Any "true" dual bander will do this. The Icom 207 or Yaesu FT-90 won't. They aren't true dual banders.

Hi,

At first a problem.

I've connected the FT902DM with the FTV901 and everything is working
(phew...)
but after a while, the signal becomes weaker and weaker...
i turned of the heater and switched it on again... The signal is as
strong as at the beginning.

Why is the signal fading after a while (5-10 minutes)?
Any idea what kind of error that can be?

The second.
The 2m Module of the FTV901 has some XTAL's on board.
In my module there aren't all of them (just one/two). Has anyone a list
of XTAL (freq...) which are in there, and maybe has someone that
XTAL's???

Thanks. Jochen

PS: Please mail to j.cichon@gmx.de (I look there more regular) THANKS!

I have two Yaesu HT's for sale, both are in excellent condition and come with original boxes and instruction manuals.

One is a Yaesu FT-51R Dual Band HT, 2 and 440. Has PL encode and decode, has been modified for Mars/Caps and includes a second battery and speaker mike.

$225.00 includes shipping.

The other is a Yaesu FT-50R Dual Band HT 2 and 440. Has PL encode, modified for Mars/Caps and includes a dry cell battery pack.

$210.00 includes shipping.

Hi Larry -

I don't have an Icom 746, but I do drive my AL-80B with a
Yaesu FT-1000D, which I believe is of similar vintage.

I drive the amp directly, and do not use ALC feedback.
Everything works fine. I set the power output of the 1000D
so that it does not overdrive the amp; this is usually about 75W.

The amp has internal ALC that acts to protect itself, but
not necessarily to avoid clipping. Connecting the external
loop should allow a "softer" level control, if needed.

With an external loop, it might even be possible to set my
rig for 200W output, and let the ALC pull the drive down
to the correct value for the amp. This would avoid the
minor inconvenience of resetting the output level each
time I switch between barefoot operation and the amp.
But I have not confirmed that it would work this way.
Just setting the output to the correct level, and running
open loop, definitely does work.

Most important advice: Don't even think about running
this amp on 110V, no matter what the claims are.

Does the DTMF generator in the microphone still work? I love the
IC-27 series, but the DTMF generator has gone out on all of my mics.

> and transmit at the same time??

The feature is called "cross-band repeat." It should be clearly stated on the radio's description. These radios can simultaneosly receive two VHF signals, or two UHF signals, or one VHF and one UHF signal. And they can transmit on one band (VHF or UHF) while receiving on the other. Or they can act as a cross-band repeater. My Alinco DJ-G5TH does all this as do many (but not all) dual band radios.

It sounds great, but in reality it's not all it's cracked up to be. Do you really want to be monitoring one frequency when you're transmitting on another while you're motoring down the highway?

Agree 110% Nothing more irritating than talking on one band and
the other band take off 'talking' it's a real PAIN. I always kept the
radio function set to mute the subband when the primary band
was in TX. Makes any radio a LOT more friendly :^)

Several older radios do. Yaesu FT-4700, FT-470, FT-530, FT-5200, FT-5100, Icom IC-2340 and others. They do not do U - U or V- V , but will listen on one band while transmitting on the other. This is IDEAL (almost mandatory) for satellite use like UO-14, SO-41, and AO-27.

Bad luck guy, Signal One went out of buisness nearly six months ago.
Get a lawyer, and sue in bankruptcy court.
But if your radio was disassembled at the time they closed, you might never see the rig or any money to compensate for it.
Your not the only one that this has happend to.

Source record: 41388
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb,alt.radio.scanner

I have some questions about this item. Have other users of this newsgroup assembled and used this instrument? The Debco web site said that the DF-1005 Carrier Phase Radio Direction Finder operates in the HF to 1 GHZ range. What specific frequencies are covered, and are there any gaps (e.g. cell phone bands)? What are the step sizes or increments in each band covered? Can I use this instrument to home in on 43-49 MHz cordless phones? Some sample frequencies are 46.610, 43.970, and 44.460 MHz. Does this device connect to a scanner, or does it incorporate its own radio receiver? Do you dial in a specific frequency and then the DF-1005 tells you where to travel to get to the transmitter on that frequency (if any)? Can you find CB transmitters using this device? Assuming that your target receiver is transmitting audio, do you hear the audio being transmitted at the same time that you DF (fox hunt) the transmitter?

Note: I live in an area where it is legal to monitor cordless and cell phones, as long as other conditions are met.

Regards,

Ian Douglas

1478. Re: **Mint** **Museum quality etc.

Just to satisfy my curiosity: I note frequent use of the terms
"MINT"
"MUSEUM QUALITY"
and
"COLLECTOR QUALITY"
when people are trying to sell used equipment.

I always understood that "MINT" implied factory new condition and
unused.

As far as MUSEUM QUALITY I have seen much radio equipment in museums and
seldom does it appear unused and brand new, often it shows signs of
considerable use.

COLLECTOR QUALITY leaves me at a loss, I suppose it depends on the
collector - does it mean looks good, works good, has all original
components, comes with original packing and documentation, or?

Just curious since I have seen some "MINT" items complete with rust,
scratches, modifications, dents etc.

1490. Items for Sale

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-17 04:39:41 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <Fn6Z8.84973$JU3.35230422@e3500-atl1.usenetserver.com>
Source record: 41301

I have a couple of items that I would like to sell.

1) Alinco DJF1T 2 meter HT receives 108-136 AM, 144-148 transceive FM, and receives 144-165 MHZ. 2.5 watt battery. Includes desk charger and RS handmike. $70 neg. Includes shipping.

2) Azden PCS6000 2 meter mobile. I bought this radio new, sold it last year
to a young man who was going to get his license (was also in CAP). The radio
works well, looks fair. ON/OFF switch seems to need cleaning because you have to "jiggle" it to get it to come on. $60 neg. Includes shipping

4) Heathkit HP23 base power supply for Heath and other transceivers. Includes
power cord for HW12, etc. $50 including shipping.

5) Heathkit HP13 mobile power supply w/ cable as above and power cord. $50 including shipping.

6) Heathkit HW18--derivative of the HW12 single banders. Formerly used in CAP and other gov't/commercial HF uses. Replaced in CAP due to NTIA requirements. Still can be used for MARS, but would need to have VFO for ham use. Uses power supplies above. Works. Cheap MARS radio for $30 neg.

Surely somebody needs this stuff for something. I need to clean out my shack so
I can accumulate MORE stuff! LOL!

1491. Help! Need info on Pryme HT

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-17 04:50:33 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <ah2is0$5l1$1@slb3.atl.mindspring.net>
Source record: 41391

I just purchased a Pryme PR-45 HT that I was told is user programmable. It is a 99-channel memory HT that I believe is not from the current model year.

Without a manual, I have not figured out how to program it. I discovered how to change the PL tones for the few frequencies that are in it from the previous user, but I would like to change them to my own frequencies.

Any and all help appreciated, thanks!

1492. Where Can I Find Power Connector For Kenwood Mobile???

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-17 05:13:52 UTC
From: xtx99@aol.com
Message-ID: <20020717011352.26138.00000134@mb-mj.aol.com>
Source record: 41302

Any help on where I can find this connector is appreciated (it's the power cord that connects to the other half of the power cord that is attached to the Kenwood dual band TM-G707A mobile 2 m/ 70 cm radio). I would prefer to just purchase quick disconnect female terminals, crimp them onto 10 gauge wire and insert them into this connector (instead of splicing them onto a power cord with the wire and quick disconnect female terminals already attached). I have placed 2 pictures of the connector on my webpage (http://members.aol.com/xtx99/index.html)and would appreciate and suggestions. Radio Shack didn't have it. I'm saving the original power cord for base operation and temporarily carefully inserting disconnects into the connector for mobile operation (thank God for fuses!!) Thanks

Just cut the factory connector off and replace it with an Anderson Power Pole connector. Do this on all your gear and you'll never worry about having the correct power cable again...

Its nothing that fancy. The HM-75 uses 4 resistors. Pressing each
button places a different value resistor onto the control connection
and the radio does what the button is labeled.

Those are actually an original Honda and Accura Motors part. The car
dealers should have then. Also some amateur radio suppliers have them
now.

Hey Guys..

I have a Drake R4B reciever for sale/trade.
It is in good physical shape,some pitting/discoloration on the copper chassis,some small holes have been drilled in the top cage (for mounting?) In nice original shape otherwise. It has newer tubes in it,and I have a spare set of new tubes,minus a 6EH5 for audio output(the one in there works.),and a copy of the manual. I was told that it was working,But don't really know enough about it to test it thoroughly.It glows nicely when turned on,and seems to work well.I was able to hear static,and hear noises,so I assume it would work well with a proper antenna and whatnot.It also has a couple extra crystals plugged into the rear.

$175 OBO As-is.I would trade for a good tube tester that tests transconductance and will allow me to match tubes. Email me if you're interested and we can talk over the details.

Nothing40.

Just about all of the HTs made today have a speaker/mic socket
made into the radio. Some are two pin like Kenwood others are
a single pin like Yaesu. The only ones that might not have one is
the "ultra" small or cheap radios. I've NEVER seen a handheld
with a rj45 connector.
(I'm not sure I want to see one either :)

1512. Re: IC-746 and Ameritron AL-80B amp

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-17 18:20:33 UTC
From: CJ <difficult@times.com>
Message-ID: <ujbdbkqngstaf@corp.supernews.com>
Source record: 41324

Hello Bill,
There is no reason why you can't. That is the default wiring for the AL-80B and according to Ameritron tech support there is nothing to gain performance wise by going with 240 vac instead assuming your standard 120 vac service is normal and / or one has not overloaded the service for that area where the amp is plugged in.

Link to all free downloadable Ameritron manuals, hookups sheets, and parts lists at this URL....

1513. Seeking Low Power FM Transmitter with Digital Tuning

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-17 18:27:28 UTC
From: simon_clarke@usa.net
Message-ID: <1287d60f.0207171027.2dd7e397@posting.google.com>
Source record: 41325

Hello from Los Angeles:

I'm looking to purchase a ready made low power FM transmitter, that broadcasts just a short range for listening to music stored on my PC around the house on various FM receivers.

I'm looking for one that doesn't have any potentiometers on it i.e. it broadcasts on one or a few set frequencies, or the frequency is set digitally.

Does anybody have any recommendations?

Simon.

1514. FS..QRP..TS 130V

For Sale....Kenwood TS 130V....QRP radio...its a 20 watt TS 130S for those not familar with the radio....I just can't seem to get into QRP any longer, and so its on the block...the radio is in very nice condition, with scratches consistent with daily use, and a couple of scratches on the main tuning knob...it has three filters(all it can hold) YK88C--YK88SN--YK88S...its a great CW rig, and I've also had fun with it on QRP SSB DX-ing...It comes with the power cord, and works just great....I am asking $380.00 + shp (USA only)...If you are really interested at this price, pse e-mail me for jpg-s, and more info, so you may know who you are dealing with...I am a licensed amateur, and an on the air test can be arranged if interested...these rigs are hard to come by, so if someone is interested, please remove the (NS) from my address, or just click on robco@optonline.net
Interested buyers pse feel free to ask any questions....73-s..Bob on Long Island, NY

1515. FS WRL 755 VFO

Newsgroup: rec.radio.amateur.equipment

From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <gcjZ8.792$Kg.369@newsread1.prod.itd.earthlink.net>
Source record: 41326

I have for sale a nice WRL Model 755 VFO. The cabinet has been nicely repainted with the correct color paint. The Front Panel has original paint. It is good but there are some small spots where the paint has faded or been scratched. It is not bad, but does not look as nice as the repainted cabinet. Some of the white lettering has faded, but you can tell what all positions are. The black dial is good. The plastic covering is yellowed a bit but not cracked. The knobs are original and in nice shape. The tubes check good. The unit lights up and seems to work, but I have not checked it out on the air. There is some corrosion in the top copper chassis, but the bottom looks very nice. Price is $85 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

1516. How to calibrate MFJ VersaTuner III SWR meter?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-17 20:16:36 UTC
From: jeff <wd4nmq@earthlink.net>
Message-ID: <3D35D0D7.8DF2FBD0@earthlink.net>
Source record: 41327
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amatuer.homebrew

Our club has an MFJ Versa Tuner III, Model 963B, the one with the tapped coil, not a roller inductor. It has not been used in many years and was donated to the club from a now un-remembered ham. Nobody can ever remember using it.

Well, it was used on field day and those using it claimed they could not get it tune ANYTHING. Well, I brought it home to check it out and what do I discover? Even in the bypass mode, straight to coaxial (no tuning network) the crossed needle meter indicated an SWR of ALMOST 5 into a Heath Cantenna dummy load!!! This was with my Daiwa CN-690B also inline between the rig and tuner and it registering SWR 1, reflected power needle didn't even move. Even the Forward power indicated 150 watts out of a 100w rig. Which was the reading on the Daiwa. No wonder they couldn't "match". The meter was telling them lies.

Ok, there are 5 adjustments in the meter circuit, 4 pots and a cap. The pots are for FWD HI/LO & REF HI/LO. I remember a circuit where you null'ed the meter with the cap and then set the needles with the pot. I tried this and couldn't get the reflected needle to move off of the peg.

So, does anybody know the meter calibration procedure for this beast?

Using the Daiwa as the indicator, I can get the portions of my antennas that are >2 SWR to 1. So, the actual tuner is working. Duh, what is there to go bad?

"around the house" might be a challenge for an unlicensed FM
transmitter. Could be OK, might not.

Check with your auto insurance company. Some will cover radios that
are "permanently" installed in a vehicle. You just have to find out
what their definition of "permanently" is... Also, you might want to
check with your renters or home owner's insurance if you have either.
My home owner's policy covers replacement cost of all my equipment in
the house.

Allow me to thank you while I scale mount soapbox -

Thanks for the info,

Looks like the method used for the up/down buttons on the microphone for my
IC-3200 mobile rig.

The T7H manual shows labels of

A -

B -

UP -

Down -

Can you tell me the resistor values associated with each function?

Thanks again.

Dwayne McCoy
N5BPF

Now that we have reached the summit -

I wonder why Icom could not tell me this?

When I submitted the same question to ICOM on their support web site I got
the following reply, and yes this is a direct quote.

<quote>
ICOM does not have this information.

Ms. Dene Hager
Technical Service Representative
ICOM America, Inc.
2380 116th Ave NE
Bellevue, WA 98004
(425) 454-7619
<end quote>

I'll got off my soap box now and continue researching my question.

Dwayne McCoy, N5BPF

For ease of training, using a small number of models makes sense.
Also, the cloning of memories from one rig to the next usually only
works on the same model.

During the Gulf War, civilian GPS units nearly disappeared from the
market for a while, as the military snapped them up for use there by
the coalition troops. They turned off SA at the appropriate time, I
guess having determined that the Iraqi military had very few GPSs.

Happy trails,

1531. Questions re. strange antenna on roof of gov't building

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-18 04:31:54 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10207172230180.44054-100000@srv1.calcna.ab.ca>
Source record: 41342
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb,alt.radio.scanner

On the roof of a government building near me there is a strange looking antenna (or at least what looks like one): it looks like a very long downhill ski which was wrapped in an upward spiral fashion around an Indian teepee, with a gap between each spiral turn of the "ski" of one "ski" width. Then the "teepee" was removed and the "ski" was put on some kind of wire mesh or similar frame. What is this antenna for? What could it do? What special characteristics could this antenna have which would make it suitable for whatever task it is intended for?

A note to the trolls and flamers: I have already thought of the possibility that this antenna is used to monitor Indian radio transmissions or make smoke signals; so I scooped you. I am just trying to see whether I am right or wrong about this.

Thanks in advance,

Ian Douglas

>Hi there,
>I am looking for a small (2-3 feet tall)for my attic,dual band base antenna?

I assume you're talking VHF/UHF.. for something small in your attic, you might want to consider a discone antenna. There are many available around the net and at stores such as Radio Shack. I just bought one from Antenna Warehouse (antennawarehouse.com) that seems to work well. It is rated for general receive on many frequencies and TX on 2m, 1.25m, 70cm and at least 1 or 2 more, like 900mhz and 1.2... I can't specifically endorse one discone over another though because I haven't sufficiently researched the performance of several different discones.

Hi Motorola Syntor(x) users,
Have you wanted to put your Syntor or SyntorX transceiver on the air
but you don't have a way to create the appropriate code plugs? Or maybe
you are missing the cables or controlhead for these fine radios? We have
redesiged the control boards for these transceivers that will allow you
to easily put them on the air using you PC as a virtual control panel,
no extra cables control heads or code plugs / proms required! Take a
look at our WEB page for the full details (including installatiuon
instructions).

Ian,
Sounds like some type or variation of a
'dis-cone' antenna. A VHF/UHF antenna with
a fairly wide frequency range.
'Doc
PS - Or maybe a 'tee-pee' stretcher.

The possibilities are endless, but for a fixed-station antenna, for 2 meters and
440 mhz, the j-poles at http://www.ilinkradio.com/antenna.html
are pretty slick, and reasonably priced.

Hi there, I am looking for a small (2-3 feet tall)for my attic,dual band base antenna?
>Any ideas of what works well? What the price is? Any gain?.....

Check out the Gain ANLI A-100 Antenna. It is a 1pc Fibreglass about 48" tall, good quality Dualband Base antenna & works really well. It's also Black, & "dissapears" at nite if mounted on a balcony or roof. Gain is something like 3.5/6. You can see it in this dealers online catalog:
http://www.advancedspecialties.net
Good luck!!

I would go with a Diamond or Comet discone antenna and NOT the
Radio Shack version. I own a RS discone and they are pretty cheaply
made. The elements are hollow and crimped onto the mounting screws.
This is ok until they start to loosen up and then you can't tighten them.
It's also not something that can be soldered either. So go with one
that has 'solid' elements.

BTW you might check out the Ventennas I've seen in the HRO & AES
catalogs, if they work that would be a slick setup for what your talking
about.

Unless this a complete hoax or hype, some installer or field tech
probably shot off his mouth about his favorite ham rig, and the
FEDs made the leap to light speed on the assumption that what's
good enough for some kid ham, is most appropriate for their use...
the case of a little bit of knowledge and whole lot of assumption.

Case in point: I have an FT-530. Great dual-band rig. However,
in testing of the antenna which works very well for both the 2m
and 440 ham bands, it is extremely sharply tuned and becomes
completely worthless just 2 MHz out of band. I suspect that
the extremely wide range and spread of frequencies to contend
with in public service, result in ever greater compromises in
antenna performance.

Consider that the ham bands are very narrow and closely related
in order to limit harmonic interference to other services.

Still I have had Police officers with their hand on their guns ask
if they could buy one. To their credit, I have not been shot in
the back or in the head, and I have not been abused under their
control.

Well, the specs can be found at:
http://www.nabcorp.com/ana.htm

As usual, there is good news and bad news.

The good news:

(1) These batteries are made by Saft and sold under the Again & Again
label by NAB.

(2) Their capacity is a very impressive 2250 mAH at 3.6 volts (this
is 4X the density of the best NiMH batteries)

(3) Their shelf life is at least 7 years.

(4) They will "fool" the VX-5R into transmitting at 5 watts.

The bad news:

(1) Despite the picture showing 2 batteries for the $5, it is really
only one.

(2) It is unclear what will happen if you have these batteries
installed and plug in the external DC.

My conclusion:

1.5 volt alkalines have capacities around 3000 mAH and cost around $1
apiece. So, if you put eight of them into a Radio Shack battery
holder, and assuming the radio is equally efficient for all different
supply voltages, you get more than twice as much 5 watt air-time with
the alkalines as you do with the 3.6 volt lithiums -- for the same
money. So, if weight is not an object, you are better off using the
alkalines for backup. Also, you can use NiMH AA's in the battery
holder, which gives you some additional options. If you must go
ultralight, then the lithiums are the choice.

P=E*I cut the voltage in half and the current doubles.
1. You may not have a 110 outlet with sufficient current.
2. Heat increases with the increase in current.
3. The XYL will get upset when the lights flicker at an audio rate.

Other than this nothing prevents the use of 110 :>)

This is a shot in the dark but it sounds like it maybe a satellite transmitter antenna. with the long ski looking thing being the feeder horn assembly. You might try posting to alt.binaries.radio-scanner with a picture of it for better analyses. I saw what sounds like the same thing out side of the CBC TV studios a few years ago but this looked like one of those big Swiss horns except it was about 30 feet long and about 20 feet at the base of the teepee quite the strange looking things.

One Excellent condition HF amplifier Made by N6ZU. Runs 2 4-400As (emiacs) also another pair comes with the amp emiacs also full output on all. This amplifer also carries in the same box a peter dahl transformer Its about 3100 Volts. Setup for 110V house current. 10-80meters tuned inputs will work warc bands at lower power levels. I only ran it about 700 watts. But can brew it up to almost legal limit. This amp is very solid you will not find a better made one. Its all one unit with a hinged box for ease of tube changes. The weight is 75 pounds. Email for pictures. Serious buyers only please. I paid 900 dollars less than 2 years ago. Make me a offer shipped.

I have one, but without tearing it apart to get the individual pages, copying it is nearly impossible. Bending it at the spine will likely cause pages to come loose as well, so I'm a bit hesitant about doing the entire manual. I could make copies of a few pages for you if necessary, but there are multi-color board layouts, and they won't come out too good.

Are you having a problem with it, or is this just because you want one? Have you tried buying one from some of the on-line manual suppliers like W7FG (if he even has one)?

ohh. well now that I know that WG is canadian and Ian is from Alberta.
Someone should state that this antenna is in canada. I live about 5 minutes
From Industry Canada's office in BC. I will see if they have one on their
roof. If anyone else should have one. I presume they should. But can't till
the morning.

Watch out, those may be intended for use in a car where they would
be hooked up to the car battery for power and cabled directly to the
antenna input of the car radio instead of broadcasting.

To use in a house you would have to provide a power supply and even
then the broadcast vs direct cable issue would probably be bad.

Hello I got MUCH, MUCH, MUCH more stuff 4 Sale.....

I will be attending the SWAPMEET in Pomona, CA this
SATURDAY 7/20/2002

" HOPE TO SEE YOU ALL THERE.....73"

The swapmeet is from 7:00 A.M. - 11:00 A.M.

Drake T-4XB Transmitter, Drake R-4B Receiver, Drake MS-4 Speaker, Drake AC-4 Power Supply, and Shure 444 Desk Microphone.....$475.00

Hallicrafters SR-150 Transceiver, and matching Hallicrafters PS-150 Power Supply.....$295.00

Icom 2AT 144-148 MHz FM Transceiver, with optional tone unit, Icom BC-35 quick charger, Icom BC-25U trickle slow charger, 2 TWO BP-8 batteries, 3 THREE Icom BP-2 batteries.....$125.00

COMPLETE packet station Yaesu Memorizer 144 MHz transceiver with a MFJ - 1270 TNC, pc cable, ac supply $99.00

RECEIVER R-648 / ARR - 41 AC Supply.....$195.00

Ham Keyer # HK5A.....$40.00

Ham Key.....$50.00

Tektronics # 466 Storage Oscilloscope.....$495.00

Tektronics # 7603 Oscilloscope.....$250.00

Collins KWM-1 Transceiver... LOOKS GREAT, cosmetically very nice, receive works fine, but no transmit,
sold "as is.....$495.00

Collins 516F-1 KWM-1 matching power supply works great.....$400.00

Swan 250C "EXCELLENT" Condition 6 Meter All Mode Transceiver. The Optional Accessories are:
Swan Matching 117-XC Speaker/Power Supply, "RARE" Swan 210 External VFO, Swan NS-1 Noise Silencer, Swan Desk Microphone, Swan VX-2 Vox Unit, Swan SWR-3 SWR Meter.....$600.00

Drake TR-6 " EXCELLENT" Condition 6 Meter All Mode Transceiver. It is very nice, and the Optional Accesories are:
Drake MS-4 External Speaker, Drake AC-4 Power Supply, Drake 9-NB Noise Blanker, FOUR Filter included.... TWO SSB Filter, ONE AM Filter, ONE CW Filter, & Manual.....$1300.00

LARGE HAMMARLUND EXTERNAL SPEAKER, NICE CONDITION.....$99.00

SMALL HAMMARLUND EXTERNAL SPEAKER.....$75.00

VERY NICE HAMMARLUND " ORANGE EMBLEM" EXTERNAL SPEAKER $99.00

HYGAIN 3806 VHF FM TRANSCEIVER UNTESTED WITH MANUAL..... $20.00

TOKYO HY-POWER HL-30V 30 WATT 2 METER AMPLIFIER.....$30.00
Collins PM-2 power supply $175.00

DX Engineering Voice Processor for a Collins 32 Transmitters....$265.00

Collins 270G-2 External Speaker.....$275.00

Yaesu Landliner LL-301 phone patch......$29.00

Yaesu MH-15CB DTMF hand microphone.....$25.00

AEA PK-88 TNC with manual $40.00

Gonset GSB-201 desk amplifier runs 4 - 811's with manual wired for 110 volts
output is 500 watts
(pick up only Los Angeles) $220.00

Eico 625 Tube Tester with tube chart.....$50.00

Heath-Kit "THE TWOER" in EXCELLENT a COLLECTOR item for sure with the
AC/DC cable, and original heath-kit microphone $99.00

Heath-Kit HW-22 SSB Transceiver with original Heath-Kit microphone,
mounting bracket and matching Heath-Kit power supply.....$125.00

Heath-Kit AM-2 wattmeter.....$20.00

Micro-Match (vintage) # 262 RF Power/VSWR meter...$75.00

Autek Research Message Memory CMOS Keyer MK-1.....$50.00

Palomar R-X Noise Bridge.....$35.00

Palomar Tuner/Tuner PT-340.....$49.00

B & W # 595 6 position antenna switch......$30.00

Courier Port-A-Lab 500 wattmeter/VSWR/Modulation/Relative Field Strength
Meter.....$39.00

KNIGHT C-577 COMPRESSOR.....$15.00

Maxon (TWO) CS-0510 4 channel handhelds with swivel cases
(can't test do not have a charger) Both for $55.00

Yosan HJ-502 "NEW IN THE BOX, NEVER USED"
WITH INSTRUCTIONS, AND ORIGINAL BOX
Power/VSWR/Modulation/ AND a frequency counter.....$85.00

Icom BC-35 quick charger for the BP-7, BP-8...$40.00

Astatic D104M-6 chrome hand microphone...$25.00

Astron RS-20A needs new Positive +, Negative - posts put on ...$45.00

Kenwood SMC-25 speaker/microphone for the TR-2500, TR-2600...$20.00

Kenwood YK-88CN 270HZ C.W. filter on 8830.7 KHZ.

This filter will fits these models:
Kenwood TS-130S,130SE,430S,440S,530S,530SP,830S,670S,660,and
the R-5000. .....$60.00 shipped in the U.S.

Kenwood TU-4C (new in the box) is the Tone Encoder for the Kenwood
TW-4000A 144/440 MHZ dual band mobile radio $45.00
shipped in the U.S.

2- KENWOOD CK-18 WARC BAND COIL PARTS KIT FOR THE TS-180S (New In
The Box),(UNUSED) (IT HAS ABOUT 90% OF THE PARTS) This will add 12, 17,
30 meters to your Kenwood
TS-180S, instruction manual included.....$40.00 shipped in the U.S.
ONLY

Kenwood IC-10 (set of two chips) these are required for computer
control when using a Kenwood TS-440S, and R-5000
.....$49.00 shipped in the U.S.

Please view my web page, and look under Accessories, & Boatanchors Galore,

Dean

GE Portables

GE MPA VHF Scan 136 - 150.8 split 192 channels nice 9.0 Condition. With battery and charger. I have this programmed for Ham and up to 152 MHz before it will not lock on frequency. $225.00

GE MPA VHF Scan 157 - 174 split. 192 channels. Nice radio 8.5 condition with battery and standard charger. I have it programmed down to 154 MHz with no trouble but will go no lower. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display. With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These look good and come with a battery and standard charger. $100.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha display. With battery and standard charger. $115.00

GE KPC 300 VHF 16 channel scan. Nice radio with battery and antenna. No charger with this one. $100.00

GE KPC 400 UHF 16 channel scan. Full DTMF pad on this radio. This one has a charger. $185.00

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170 but I have programmed these in the ham band with no trouble. These

have battery, antenna, and standard charger. $75.00 each

GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can

program these to the ham band. With battery, Antenna, and Charger.

$85.00 each. Have 3 of these.

GE MPS VHF 12 channel. 8.5 condition. New antennas and NOS batteries

Standard charger. $60.00 each have 2.

SALE!

GE MPS UHF 48 channel. 8 = 8.5 condition, These have NOS batteries

And have 4 banks of 12 channels. These can go to the ham band. I

have been Using one of these on my ham repeater and it works great.

$60.00 each I have 4 of these. Programming on 12 channels included.

GE UHF MPS 8 channel with 8 different tones. 8 different tones can be

Selected for each different channel. Battery and antenna. $50.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1

good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I

sold this radio a year ago but have taken it on trade. Condition 8

with belt clip and charger. I had this radio run for stolen from CSX

by a local CSX Special Agent when I first bought these in a lot and

was told that it had been sold at salvage. Perfect for a RR Museum or

shortline on a budget. This could also be programmed for marine

frequencies. Like new tall Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms.

$100.00

GE MVS 800 conventional 2 channel. Without mic tested OK $45.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240

450. - 470 Looks good. $125.00

GE MLS Low Band 16 channel scan. 42-50 split. New mic. Should

Program to 6 meter ham. 60 watt $150.00

GE Mastr II UHF 75 watt with preamp. No Icoms drawer only.

MC65KKG88B $90.00 each only 2 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A

With 1 set of Icoms $45.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33

With 2 sets of Icoms. $10,00 each. I have many.

GE Mastr Pro 110 watt lowband 42-50 split in a wall mount cabinet

With a power supply for a base. $35.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00

each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr

II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that

I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Just in not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.

16 channel model has short cable and some handle bar mounts. Mic

included but no speaker. Not tested yet since I just got it in.

$50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit

charges your battery and turns your portable into a mobile radio.

(Convert a Com) With mic, speaker, and power cable. $90.00

GE Accessories

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen

programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5.

$4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and

162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50

each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820

heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE Mastr II mounting plates $15.00 each

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a

rapid rack charger with a DB 15 cable and uses a MPD body to attach a

battery to. Has LED readout in display area of MPD body to tell

discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card

and power supply / speaker. $300.00

Other Radios and Accessories

Motorola Saber III Secure VHF 146 split 120 channel radio. Alphanumeric

Display. Has Battery Smart charger and speaker mic. I have been using this on the VHF ham band. Has a new case that was installed at the Motorola Rockford, IL Depot So it also has a new model sticker that they put on as well. Nice 9.5 or better radio. $475.00

Motorola MT-1000 low band 42-50 split. 6 channel scan. Looks good

With battery and charger. $160.00

Yaesu FTH 2009 VHF portable. 6 channel. Works great on ham and public

Safety band. With wall charger $95.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great.

This was in my van before I added another MVS so I know it works.

$95.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery

charger but I will split up the pair if someone wants 1 radio only. 6

channels programmed for 10 meter ham band on 2 repeater pair and 4

simplex frequencies. 2 radios and 1 charger $175.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by

Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition

and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of

crystals for each radio. Also have a working battery and charger for

each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work

with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know

"Motorola" They are good people and I will pass along any trades you

may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola Saber II UHF 48 channel scan. With battery and antenna. 9 condition $350.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS

Extra parts for GE suitcase programmers Data modules, Printers, cables, proms, Anything you have extra. MPA or MPD portables what do you have and what do you want for them? Johnson scorpion program cable.

Terms

All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me. Contact me off list at. Gundoc@insightbb.com

1577. 2m/70cm Rig In House & Antenna On Car????????

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-19 03:52:57 UTC
From: xtx99@aol.com
Message-ID: <20020718235257.05854.00000489@mb-fm.aol.com>
Source record: 41288

I just got my first radio....a Kenwood TM-G707A 2m/70cm dual band. I currently have it installed in my car along with a Radiall/Larsen NMO Magnetic Mount with 12' of coax (which is made with a thin layer of plastic on the magnet to prevent scratching the car) & a Diamond 2m/70cm radialless mobile NR770NMO antenna. The antenna instructions say that the antenna "employs a DC ground structure so that whip element and ground section (outer shell of the impedance matching section) are short-circuited, and center conductor of the feedpoint connector and whip element are isolated."
I'm not sure if I want to use the radio for anything other than moble use. However, I would like to spend time with the radio and learn its many menus. I'd prefer to learn the features of the radio in my home rather than my car. Can I bring the radio in the house, run it off an appropriate power supply but still use the magnetic mount antenna on the car temporarily? If I can, I'd have to of course use a double female connector and 25' of additional coax. I'm not sure if I can add additional coax cable without throwing the SWR off. (I don't have an SWR meter to check). Also, would I have to use the same type cable for the extension or could I use higher quality cable? (I'm aware that the loss is high at VHF and UHF frequencies). I'm also concerned that because the antenna is made short-circuited (see paragraph above) and because the antenna mount isn't touching the car body (because of the plastic covering on the magnet) that I must use the common battery ground off my car to get a proper SWR. If I can use my magnetic mount in this fashion, is it necessary that I keep it on the car??...Perhaps I should temporarily sit it in the attic instead. Thanks for any suggestions.

Hi All....

I'm trying to find some of the original radio and antenna
equipment for my airplane; an Aeronca L3B "Grasshopper"...
(See http://home.att.net/~jm.price for picture)...

The specific equipment I need is:

RCA AVA-120 Trailing wire antenna
RCA AVA-126 Power supply
AG-40 Wind generator

The equipment in question might not have actually been manufactured
by RCA... I know that at least some of them were manufactured
by Continental Radio & Television Corp...

Any help would be appreciated

Of coarse I am Canadian I have answered other posts of yours with a Canadian flavor.
The guys at Industry Canada are a good group. If you ask nice they will take you for a tour. I did this a few years ago and had a look at the radio tracking system. They can track any radio in the Lower Mainland in under 6 sec. including CB and cell-phone. The antennas that they use are remote and the signals and controls are shipped through the phone lines so they can even monitor week transmitters in Abbotsford or North Vancouver. All of the radios are computer controlled including the telephone pole radios that they can set up on any street. When I was in their they had the top of the line Icom wide band receivers including in the pole mounted box that I was shown. Also all of the scopes and station monitors needed to see if a radio was chucking spurs. Anyway I seem to have gotten of topic a bit what I wanted to say was that I can't recall seeing any antennas on the roof of their building nor when they were down town but you can look and let me know.

Source record: 41294

If the antenna is matched (has a good swr) in the 1st place, adding additional coax with a barrel connector will not adversely affect the swr provided the coax is 50 ohms.

In fact, using RG-58, with a fairly high loss on VHF, you would have a better SWR at the transmitter for an antenna that was not perfectly matched since you would lose some additional power getting to the antenna, the same percentage of power would be reflected due to the less than perfect match, and that power that was reflected would again be attenuated by the extra length of lossy coax.

Even with "great" coax, if you have enough of it, you can still see this happen. With heliax to an antenna on top of a 500 foot tower, seeing even 1 watt of reflected power with 80 watts going up the tower, I knew that our UHF repeater antenna had been destroyed by lightning again. If the SWR wasn't perfect, it was time to call the tower climbers to replace the antenna.

Hard to say whether sales would increase -- the few times I've checked in on 10m fm, there were so many signals coming in, from all over the earth, with people cutting each other off, it sounded more like cb.

Still, if you need the fm, the Yaesu 840, in about the same price range as the Icom, offers 10m fm with repeater offsets.

For many years, I've run a dual bander in the home, using a Larson dual-band whip on a magnetic mount, stuck to a metal serving platter. Stick your mag mount to any handy metal surface, a file cabinet, refrigerator or whatever, and it should get out well. If, for any reason, your antenna doesn't work in such a situation, just build a little ground plane vertical around a coax connector.

Since the item in question does have a "Buy it now" option, I guess that means that the item is "for sale" -- even ignoring the fact that an auction (even without a "buy it now" option) is a method of bringing together a seller and a buyer and agreeing on a price for the item being offered.

Since he say's it's FS and using "Buy it now", does that mean I could call him and offer $55 for it and he could accept that? Considering that it's an auction, using FS in the subject line doesn't seem right. It's not FS in the truest sense of the word. Personally if his starting bid was only slightly less than his "Buy it now" price, that would be (in my mind) close enough. Just my opinion.

1597. Welz Power Meters?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-19 17:01:11 UTC
From: donrm@soco.agilent.com
Message-ID: <1027098071.625323@cswreg.cos.agilent.com>
Source record: 41158

Anyone know where I can buy a Welz power meter? This is a little box with an edgewise reading meter that shows power up to 5W from 50-500 MHz with a BNC input. Great for testing handheld radios.

TIA & 73
Don K6LTS
donrm@soco.agilent.com

1598. Opinions on Kenwood TS-570DG/SG

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-19 18:02:25 UTC
From: alins@post.com
Message-ID: <51990af0.0207191002.7872e01f@posting.google.com>
Source record: 41159

Can some Kenwood TS-570DG/SG users please post their comments on this rig, especially in terms of its receive performance and reliability?

I have read the reviews on eham.net; just would like to hear from more first-hand users.

Thanks a lot

Ali

1599. TS930 ALC...

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-19 18:37:37 UTC
From: Kresimir Kovarik <kreso@kreso.com>
Message-ID: <ah9m85quq1@sunce.iskon.hr>

Hi...
Anybody have idea how and where to set correct ALC level..
Just get 930 here without manual, and ALC is going very high
at 50W with SWR 1:1....

Thanks.

1600. FS AMPROBE AC/DC 1000

Repeater antennas are normally mounted on towers who's primary purpose is another service. For example it could be mounted on a TV antenna tower. Ergo, the repeater is limited to the site, not 200 feet.

1603. Re: TNC for sale

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-19 20:19:52 UTC
From: Alan Beagley <abeagley@optonline.net>
Message-ID: <3D387468.30001@optonline.net>
Source record: 41164

I don't know about *calling* the vendor and offering the "Buy it now" price: "Buy it now" is intended as a "click here and the auction is ended automatically" option. It has always been possible (although frowned upon) for a seller to accept a private offer and end the auction early, but s/he still has to pay the eBay listing fee. I don't recall whether eBay imposes additional charges in a case like this, but my guess is that a seller who does it a lot is going to get blacklisted.

One advantage of going through eBay (whether using "Buy it now" or the more conventional bidding method) is that eBay has a conflict resolution procedure -- although I have never used it.

I have never sold anything on eBay, but I have made many purchases using eBay (although not for several months). I have used both "Buy it now" and the traditional bidding method. I have paid sometimes with a USPS Money Order, sometimes using PayPal, sometimes supplying a CC No. direct to the vendor, once using escrow. I check out the feedback ratings of the vendors, and I have never been "burned"; the closest I came was for a $500 item, but the vendor's local police contacted me just as I was about to go after him, and I got my money back in full (credited back to my PayPal account) in a short time.

I have got some great bargains, especially where items were described poorly, so that, for example, only a person knowing a specific Part No. or Model No. would find it -- by searching in the descriptions as well as in the titles. I am amazed at the outrageous prices some people pay for items; I can only guess that many people do not do their homework properly and assume that anything bought at an auction must be a bargain.

1604. For Sale Yaesu FT 101 Z3 Mk3

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-19 20:33:18 UTC
From: big boy now <shogun1965@lycos.co.uk>
Message-ID: <wl_Z8.9691$Fm3.9397@news-binary.blueyonder.co.uk>
Source record: 41165

I have for sale a yaesu FT 101 ZD in very good condition.
in its day it was a top of the range radio.
I have been using this radio just for receiving as I am not licensed
to transmit on it.
it receives very clearly on all the bands I don't know if the transmit side
of the radio works or not so I am selling it as a receiver as I can not try
the transmitter side of the radio...
there are to many knobs and dials to list but if you are looking at this you
are more than likely a licensed radio ham and you can look it up on the
internet
to find out the full spec or more than likely you know what the radio is.
I have a very good idea what this radio is worth so if your interested in
this radio send my your serious offers only to the following email address
shogun1965@lycos.co.uk
I am willing to wrap it and post it the way you want.
or I am willing to meet up some were if you pay...
anyway email me your offers to shogun1965@lycos.co.uk

If you're on SSB, turning down the microphone gain doesn't do the job?

It's been some time since I've had a TS930... but if you're talking
about CW, I believe there is a "carrier" control which should be
reduced. This control, however, will have no effect on SSB.

Should "flicker" on voice peaks, however, the ALC meter is calibrated for
the full 100+ watts output.
Proper audio reproduction should happen with the ALC meter going no higher
than half ALC scale on SSB voice peaks.

Source record: 41182

I have a uniden President HR2600 that has been in storage
since the prior sunspot cycle. I have no idea how to attach
a code key and, having long since lost the manual, am unable
to RTFM.

I had a very similar Radio Shack version that had a mini plug
on the back labled CW. This only has an unlabled molex connector
with nine openings (a little white wire jumpers two of them).

Anyone happen to know (or have a manual floating around)?

50W CW?
Using internal antenna tuner?
Is it the 100W version? Some 930 models had less than 100W finals.
What line voltage? Some models require 100V AC, and get very unhappy above
that.

Will dig out my manuals later this evening, but need more information.

One of the failure modes in the 930 is to lose one of the two
final transistors (on models that have two final transistors),
which gives the symptom you mention.

Connect your key to pins 8 & 9 on the plug. Pin 8 would be hot if you have
polarity issues.

Source record: 41186

Rob,

You need to change/replace the jumper in that white, nine pin, plastic plug
in the back of the HR-2600.
The radio comes with the Red/White wire on pins 1 &7. This allows for
internal speaker operation.

For CW operation you need to connect the key to pins 8 & 9. Pin 9
will be the "hot" or positive pin.

If you want to use an external speaker you will need to remove the jumper
between pins 1 & 7, and connect the speaker wires to pins 1 & 2.

This is a lovely little radio, and I have enjoyed mine while working mobile
all over the U.S., Europe, Russia, and S.A. during this sunspot cycle. The
FM mode is great, too, for repeater DXing, and yes, simplex FM.

Good luck and enjoy the HR-2600,
Larry, KF2SJ

1624. Icom 738 to trade

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-20 02:11:06 UTC
From: MD <ve3tmt@rac.ca>
Message-ID: <cD3_8.17217$Db.1269564@news20.bellglobal.com>
Source record: 41187

I have a near mint condition Icom 738, complete with power cord, manual, and original box. Sorry no microphone.

Details here: http://www.n7uic.net/radio/icom/ic738/specs.htm
Picture here: http://www.n7uic.net/radio/icom/ic738/ic738.htm

I am looking for any of the following:

MFJ Deluxe Loop antennas (10-30 Mhz version)

Behringer VIRTUALIZER® PRO DSP1024P

Behringer MODULIZER® PRO DSP1224P

Behringer ULTRAMIZER® PRO DSP1400P

If you have any of these plus cash to trade make an offer. I was going to keep this as a back-up rig but would prefer to deal.

Thanks for reading,

For Sale....Kenwood TS 130V....QRP radio...its a 20 watt TS
130S for those not familar with the radio....I just can't seem to get
into QRP any longer, and so its on the block...the radio is in very
nice condition, with scratches consistent with daily use, and a couple
of scratches on the main tuning knob...it has three filters(all it can
hold) YK88C--YK88SN--YK88S...its a great CW rig, and I've also had fun
with it on QRP SSB DX-ing...It comes with the power cord, and works
just great....I am asking $380.00 + shp (USA only)...If you are really
interested at this price, pse e-mail me for jpg-s, and more info, so
you may know who you are dealing with...I am a licensed amateur, and
an on the air test can be arranged if interested...these rigs are hard
to come by, so if someone is interested, please remove the (NS) from
my address, or just click on robco@optonline.net
Interested buyers pse feel free to ask any questions....73-s..Bob

Anyone know how the European version of the VX5 differs from the US version? I am thinking of buying a euro version from bander.com
I seem to recall there was something about the channel steps being different? Is the transmit range more limited- or maybe that doesn't matter since you can open the thing up with EVE software.
Thanks AB7RU

>Anyone know how the European version of the VX5 differs from the US
>version? I am thinking of buying a euro version from bander.com
>I seem to recall there was something about the channel steps being
>different? Is the transmit range more limited- or maybe that doesn't
>matter since you can open the thing up with EVE software.

According to the owner's manual, one big difference is that the European versions have completely different "repeater sub-band" limits for the 2-meter and 70-cm bands, and the default offset for each band may also be different. The automatic repeater offset feature would do the wrong things, if you tried to use it "as is" on U.S. repeaters. The default offset is easily changed via the menu system, but I don't believe that the sub-band edges and offset directions can be altered via the menu. This could be a major inconvenience!

The default VFO synthesizer step size is probably also different (easily changed), and the "reduce deviation" default might differ as well (ditto).

The Euro versions have different sets of "allowed" and "forbidden" receive bands, in order to comply with various national regulations. If I recall properly, some of the Euro versions have much narrower receive version than the U.S. version does.

Many of the receive limitations can be removed by re-jumpering the radio and resetting it, or by using the EVE software to change the "virtual jumper" settings. Reportedly, even the country code can be changed in this way... so, you might be able to buy a Euro version, and then re-jumper it to the U.S. configuration to set the repeater sub-bands/offset/etc. to appropriate defaults for use in this country.

Recent U.S. VX-5R models use a modified CPU, which won't allow any reception in the cellphone frequencies even if the "freeband" hard or virtual jumper settings are changed. I haven't heard whether Yaesu/Vertex is planning to do a similar thing with the Euro models... if they do, you might find that a Euro model simply can't be reconfigured to behave like a real U.S. model.

As always, YMMV/PAYOR (your mileage may vary, proceed at your own risk). Using a modified VX-5 to transmit outside the amateur bands risks confiscation and loss of license. Using one to scan cellphone frequencies, and then disclosing a conversation to a third party, is against the law and (if pending legislation is actually passed) could end up with the discloser facing felony(!) charges in Federal court.

Thanks for taking the time to respond Dave
Yeah I probably won;t go to the trouble to buy a Euro version... but I am in the market for a decent dual bander that can still receive the cell freqs (yeah I know its illegal, you can go to prison blah blah blah) - Am looking at picking up a used IC-W2A, DJ580t maybe an older Standard 558 - those were nice rigs - anyway I kind of live in the past - I am not too enamored with the new crop of do-it-all handhelds that can fit in your pocket. Had a VX5, it was a nice little rig, but I think I want to go back to something clunkier and more obviously an HT! Excuse my ramblings....

Hi Fellas;
I have for SALE:
Like New(mint), Heathkit IT-11 Capacitor tester.
I checked the manual for the parts & they are all there except the Fuse holder & a few resistors.
The Fellow became a SK but not until he started on the kit, well just about!
He only started on the chassis components, really nothing soldered to speak of, he just started.
I did'nt bother counting all the little screws as they were in a bag & would have taken hours :-)
Everything else, Transformers, switches, sockets, knobs, etc has been accounted for!
Price is $200.00ppd or B/O, Conus.

Source record: 41223

Hi Alan, nice to hear from you! The "Buy it now" price was $60, so my point was that if it were truely FS, I could offer him less and see if he would take that. That is a standard FS deal. Using FS in that instance here would be misleading as it's an auction, he has no choice but to finish the auction and sell to the highest bidder at the highest bid, be it $40 or $140.

Chuck WG2A

"Alan Beagley" <abeagley@optonline.net> wrote in message news:3D387468.30001@optonline.net...
> I don't know about *calling* the vendor and offering the "Buy it now" price: "Buy it now" is intended as a "click here and the auction is ended automatically" option. It has always been possible (although frowned upon) for a seller to accept a private offer and end the auction early, but s/he still has to pay the eBay listing fee. I don't recall whether eBay imposes additional charges in a case like this, but my guess is that a seller who does it a lot is going to get blacklisted.
>
> One advantage of going through eBay (whether using "Buy it now" or the more conventional bidding method) is that eBay has a conflict resolution procedure -- although I have never used it.
>
> I have never sold anything on eBay, but I have made many purchases using eBay (although not for several months). I have used both "Buy it now" and the traditional bidding method. I have paid sometimes with a USPS Money Order, sometimes using PayPal, sometimes supplying a CC No. direct to the vendor, once using escrow. I check out the feedback ratings of the vendors, and I have never been "burned"; the closest I came was for a $500 item, but the vendor's local police contacted me just as I was about to go after him, and I got my money back in full (credited back to my PayPal account) in a short time.
>
> I have got some great bargains, especially where items were described poorly, so that, for example, only a person knowing a specific Part No. or Model No. would find it -- by searching in the descriptions as well as in the titles. I am amazed at the outrageous prices some people pay for items; I can only guess that many people do not do their homework properly and assume that anything bought at an auction must be a bargain.

Message-ID: <200720022045126364%mparkes@nospamatt.net>
Source record: 41225

Are all of the ft50s capable of opening up via some combination of solder pad removel or software mods etc to receive all of 800 mhz? I have seen some mention of the later units not capable of being opened up completely... if this is so, is there a serial number break somewhere you can look for so you know if you are getting one that can be completely "juiced" :)
thanks, mike ab7ru

Source record: 41229

In Europe, 2m and 70cm are totally different bands than in the US:

2m: 144-146 MHz
70cm: 430-440 MHz

So, appart from the automatic repeater-shift 'problem', you also have your differences in amateur bands.

1675. Why a fast charger has 4 contacts?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-21 13:30:34 UTC
From: Sam.Yang@csiro.au
Message-ID: <4b8ff9bc.0207210530.60c5423@posting.google.com>
Source record: 41231
Cross-posted to: rec.radio.amateur.equipment,aus.radio.amateur.misc

I noticed that many handheld radio battery chargers have 4 electrical contacts for charging plus another 2 supplying power to the radio. As a battery is a 2-termial device, why they use 4 contacts for charging?

Specifically, I have an Uniden APX116 charger which I want to use it to charge my Uniden UH056 CB radios. As I don't know which contacts are for what, so I don't know how to test the charger and to connect to the batteries. I have opened the charger. All for contacts are used.

Any relevant information would be appreciated. I have contacted Uniden. Their reply is that they are required by law not to disclose the information.

1678. Kenwood TH-F7E (TH-F6A) deaf on HF ?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-21 13:58:43 UTC
From: Igor <rts@a-teleport.com>
Message-ID: <aheeqk$1cjv$1@pandora.alkar.net>
Source record: 41234

Hello, All,

I have one for last couple of days

It works fine both 144 and 430, but it seems the embedded 0,1 - 1200 mHz scanner is almost useless for HF.

I can hear only few broadcasting stations below 30 mHz with its bar and rubber antenna. No one ham station for whole weekend on 40 and 80 !

Also I have handheld SONY ICF-SW7600GR - it works much more better on HF with approximately same size of antenna.

May be my sample is broken and need the repair ?

Regards,
Igor

Don't know about your particular rig but some use the contacts depending on the capacity of the battery you are charging. Power is fed out to all the contacts but internally to the battery only the correct terminals are used for charging.

Manufacturers may offer several battery options for a given radio
model. There are various proprietary schemes in use by which a
battery will identify itself to the charger so that the proper charge
rate is selected. For example, one company simply puts a given
value of resistor that the charger reads like an ohmmeter, so that it
knows what rate to select. Another company simply feeds different
rates to different contacts with a common negative terminal, so that
there are low and medium plus terminals, and 2 are used for high.
Often not all four terminals are used for a given model battery.
Also, many rapid-charge batteries have an internal thermistor that
signals the charger to switch to trickle rate.

There is usually no reason why you can't charge via the radio
side terminals at the normal rate. Many aftermarket chargers do
this to avoid the hassle of proprietary drop-in contacts. Some
even allow rapid charging through these terminals by providing an
external thermistor, and allow manual (or programmable)
rate selection.

Occasionally, you run across batteries with a series diode that won't
allow this. Clever (careful) use of a VOM can reveal the connections.

Normal rate is 1/10th of the battery MAH capacity for 16 hours.
since you have the charger open, you can apply ohms law and
modify for your needs.

But, the bids arent (at least yet) quite up to that price yet.
Folks offering products for auction on ebay are usually bombarded with a
bunch of questions, like 'how much is the reserve' and 'can I just buy it
from you now?'. Both of these fly in the face of what an auction should
be. So quite possibly, this person just set that high buy it now price to
eliminate the questions??

From: Adrian Jones <g1kea@yahoo.com>
Message-ID: <aheug1dlm1@venus.btinternet.com>
Source record: 41099

Not sure if correct group but here goes...

I am looking to purchase a Kenwood TK3101 PMR446 transceiver for use in the UK. Output power is limited to 0.5w but looking around there are also 2w and 6w versions available. I know it is possible to reconfigure the channels in a service mode using certain keystrokes and using software it is possible to change output power aswell. Does anyone know if it is possible to change the power with service mode keystrokes rather than obtain special software. The radio will be situated within the bodywork of a motorcycle so 2w would be better than 0.5w for better results.

1700. FS:Lakeview TM-1 License Plate Mount

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-21 22:39:54 UTC
From: Keith V <kavan@neb.rr.com>
Message-ID: <xJG_8.2760$0w2.194319@twister.kc.rr.com>
Source record: 41106

Designed for Hamstick HF or similar type HF antennas. All stainless steel
with stainless steel hardware and ground strap with terminals. Complete
with instructions to mount behind license plate. Simple and effective.
This mount is new, $35 shipped conus.

See reviews at www.eham.net/reviews/detail/1301
or more info at www.hamstick.com

Thanks,
Van,
K0KAV

1701. Info Needed: RF FingerPrint Software?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-21 23:38:37 UTC
From: Dan <n7slc@yahoo.com>
Message-ID: <ahfgm0$1vs$1@terabinaries.xmission.com>

1703. IC-746 Japan version TX mod needed.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-22 00:12:23 UTC
From: "R.Moore" <richard5@flash.net>
Message-ID: <3D3B77F4.19934BA1@flash.net>
Source record: 41109

I recently purchased a IC 746 and it is a version for Japan. The 2 meter TX coverage is 144-146. RX is 144-148. Does anyone have the mod. to open the TX to the US band 144-148? All the other bands seem to work fine.

Depends on the ICOM rig your using.

I have used both mics on my 756 series radios, and you can make them sound exactly the same through the menu settings.
The SM-20 tends to have slightly "sharper" output, and it drives the radio better due to the pre-amp built-in.
The Heil Gold-line has a very nice "deep" output on the wide element, and depending on the heil cartridge installed, can be sharp when using that.
However, the gold-line does NOT have much drive on ICOM radios prior to the PRO.

1707. Re: Kenwood TH-F7E (TH-F6A) deaf on HF ?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-22 01:41:22 UTC
From: Brian E <none@bigcorp.com>
Message-ID: <3pJ_8.2366$dO4.302167@newsfeed.slurp.net>
Source record: 41113

I don't believe your handheld is broken. My TH-F6 is also virtually deaf in the 1500 KHz-88 Mhz range along with 230 Mhz up (except for the 440 MHz amateur band and the immediately adjacent business frequencies). I cannot copy WWV on any of their frequencies and I've only rarely heard traffic in the 20, 40 or 80 meter ham bands. An external antenna helps but very little. Also my recent experience at an air show with my HT and a friend's VX-5 was sorely disappointing. My friend could hear aircraft several miles away while my HT could only copy them when they were within sight. In addition, the RF dense environment of the air show effectively shut down my 440 MHz receive while my friend's HT was used on the same repeater with virtually no intermod. I am not necessarily a Yaesu fan, BTW. I'm simply stating my experience. YMMV.

I don't think so. If a converter module must be used to get to 50
MHz, how could you expect the basic receiver to cover 88-108 MHz? You
might try hacking a 6-meter converter module. :-)

The August 2002 CQ has a pretty detailed review on Heil's Icom mikes
(HM-i, iCM and HMM-ic), but the reviewer was using an Icom 735, which may or may
not have the same mike requirements as your 746.

Plus the fact that most 2m radios are FM only and most 10m are usually all
mode.

Wouldn't matter if he could hack it anyway. The band pass filters wouldn't allow decent receive sensitivity at that freq. range and the WIDEBAND FM broadcast transmitters would be way to wide for the filters in a FT 676.

Source record: 41125

Overall it's a great feature rich radio. It's good on cw, with 10 dsp filter bandwidths, with one flaw. If there's a strong signal close to the signal you're trying to work, the agc is triggered and the receiver loses the sensitivity to work the signal you're trying to work. For crowded bands with similar signal strengths it's a wonderful radio, but where you have strong adjecent signals, you may want to invest in a good narrow filter for the IF.

Hacking does not preclude changing the filters. However, you are
certainly correct regarding the FT-767 filters. Anyway, I meant it as
a joke.

1727. Oil in dummy loads vs. SWR.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-22 19:13:35 UTC
From: jeff <wd4nmq@earthlink.net>
Message-ID: <3D3C599F.732499B6@earthlink.net>
Source record: 41133
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I feel that I am once again going to open the old debate which oil to use in a dummy load for heat conduction.

But, that is not my question. Mine has do with the oil's effect on SWR vs. frequency.
The reason I ask this I have a Dentron Big Dummy I bought at a hamfest many years ago and have seldom used it, then only on HF, do to being "out" of ham radio for a while. I have now been using it to check out several old club rigs and I have noticed a big difference between it and the club's Heath Cantenna.

The SWR increases as frequency increases. At 80 thru 15 meters there is no SWR indication with just a little at 10 meters. No problem. But, at 2 meters the SWR is 3:1. The Cantenna has no indicated SWR at 2 meters. Infact, it states on the can SWR <1.5 up to 300 mc.

The Dentron has no frequency range on it.

I took the lids off and both had an identical looking carbon resistor. But, their oil was definatly different. The Cantenna was perfectly clear while the Dentron was much darker.

So, does anybody know anything about the Dentron Big Dummy and it's frequency range? What kind of oil it shipped with?

I started to take the lid from each, drain and clean them and swap them to see if the range follows the oil or the resistor. But, that is to much work.

Oil probably does not affect SWR that much.
Just pull the resistor out of the oil and see if SWR changes.
Your experiments verify that the resistive component is 50 ohms.
The problem is likely in the inductance of the resistor and it's
mounting structure. Resistors that "look alike" often aren't.

If my memory serves me correctly the Cantenna uses Mineral Oil like you might find in a drug store. It is completely colorless and I have used it in my load for many years up to 800 mhz. Hope this helps Don KB6GQA

1732. ASCOM SE550 mobile transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-22 20:44:05 UTC
From: Stephen Tompsett <stephen@blob.demon.co.uk>
Message-ID: <8uideBBV6GP9EwQt@blob.demon.co.uk>
Source record: 41138

Does anyone have any experience of ASCOM SE550 transceivers?

I have a number of low-band FM units (66-88MHz) which I currently have working on 4m, but someone has suggested that there may be a replacement system EPROM that would give greater functionality than I currently have available.

Hi Matt..

I think you are in the UK since you posted from ntl.world.com

There's a little activity on the band, no more than a dozen in the UK
I would say, but interest is growing due to the influx of the surplus
Ionica microwave links. I think you must have a PA from one of the
Ionica base stations. I hope to be on that band myself before too long
using the same PA and a transverter board taken from the Ionica stuff.

I'm not sure where you live but if you are in the Midlands you might
contact the South Birmingham Radio Society who have a particular
interest in 9cm.

I live in Sheffield and am operational on 1.3, 5.7, 10 and 24GHz.

Check my website for further microwave info, including a list of
3,4GHz beacons. URL in signature below..

Are you on any other microwave bands?

(remove "nospam" from my email header to reply)

The Heath Cantenna did not come with oil. A club I belonged to filled
it with "Chevron Flo-Cool 180" which worked great. Fortunately we had
a free source of that product, as it is not cheap. Mineral oil seems
to be the fluid of choice.

IIRC most of those loads had the load resistor surrounded by a
tapering shield -- I assume that acted like a tapered coaxial
line that "matched" the load resistor impedance along its
length. I wonder if the different oils have different dielectric
constants--
that could explain the differing SWR readings at VHF frequencies
(assuming the load is non reactive to begin with).

1744. New vs. old style mic. for ICOM IC2100H ?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-23 00:54:15 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d3ca93d$0$3581$272ea4a1@news.execpc.com>
Source record: 41055

Amateur Electronic Supply (http://www.aesham.com) lists
two flavors of ICOM IC-2100H 2 meter xcvr:

IC2100H ICOM 50W 2M FM/HM98S TTP MIC*

IC2100H25N ICOM 50W 2M FM XCVR/ NEW TTPMIC

There is a $30 difference between the radios
listed, and the second one is more expensive.

What model microphone is currently being furnished
with the latest IC-2100H ?

How does it differ from the original HM98S microphone
mentioned in the first listing?

I've read that some early IC-2100H radios had problems
with losing transmitter output. Did ICOM "fix" the problem
before switching the microphones? In other words, if one
buys a "new" IC-2100H packed with the original style
microphone, is that vintage radio susceptable to the
transmitter output problem?

Thanks.

Jeff,
The oil shouldn't affect SWR if it is clean,
not contaminated with 'stuff' that might change
it's conducting properties. It sounds like the
oil in your Dentron dummy load may be contaminated,
or maybe has changes chemically if it's ~that~ old.
Try dumping it, cleaning the container, and refill
with mineral oil.
'Doc

The RF is fed into the resistor, which is the actual dummy load.
The oil is only there to dissipate the heat.

Since the topic of "cantennas" has come up, I though I'd ask a question that came up before:

How much does using oil multiply the resistor's effective wattage rating? For example if I used a 2W resistor and put it in a can of oil, how much can I dump into the resistor?

This is NOT a simple question.
Ultimately, what goes in must come out.
So, one limit is sorta proportional to the relative surface area,
assuming you've got good convection and perfect conduction.
The thermal mass of the oil slows things down. That's why peak power
rating is higher than the average power rating.
Another limit is the thermal resistance of the system.
The oil is only one part. If you use a film resistor, you'll get much
better thermal contact to the oil than if you used an AB carbon
resistor
with the bakelite surface (2W resistor). At some power level, the
resistor
is gonna explode, no matter how much oil it's in.

The resistor in a cantenna is probably worth 50-100W in air.

Or it's mounting method.

I took the Dentron resistor out of the oil, dried it and tried 2 meters into it. Still had 3:1 SWR.
Now, the resistor mounting in the Dentron had only a piece of flat metal running from the can lid, ground, to the bottom of the resistor. While the Cantenna's resistor is inside a grounded aluminum tube which connects to the bottom of the resistor via three screws.

So what Peter wrote may be along the right line. May do some more testing.

Hi Jeff,

Mounting method should include a close examination of the connection. Given you have earlier reported the color of the oil as dark; this could be evidence of contaminants, scale or bits sloughed off from the resistor if/when it was over-powered.

This sounds obvious, but did you measure the load's resistance (at DC)? How about when it is immersed in oil?

This is simply accomplished with the handy VOM, but you should go further and measure the resistance over a range of applied voltages that span a significant range of power. However, finding power sources to deliver an amp at up to 100V is rare. The resistance of a resistor varies with current applied; and only the sub-watt models come close to zero temperature coefficient (and power resistors are the most likely to fluctuate wildly).

Another factor is that the Dentron may have never been designed for 2 Meter operation (although I cannot imagine why not).

1772. Re: TS-950SDX vs. TS-2000 what is better

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-23 17:18:04 UTC
From: "Scott, N9AI" <nospam@nospam.org>
Message-ID: <gdg%8.236683$iX5.12394487@bin3.nnrp.aus1.giganews.com>
Source record: 41083

It depends on what you want to use the rigs for. The TS950SDX is a hard core conresting/DXing rig, designed to compete with the top notch Yaesu FT1000 series of rigs. The TS2000 is a fine all around rig that certainly does more, but it is sometimes maligned, especially by people who don't own them.

You do seem to have some misconception here about the price of these rigs. A used TS950SDX (they don't make them anymore so you can't get one new) in excellent condition is generally about $2000 to 2300.00. If you see one cheaper, be very cautious. A new TS2000 is about $1750-1800.00, used about $1300-1500.00.

The TS950SDX was for it's time, one of the finest radios around, easily comparable to the fine FT1000D or MP and much better than the very over-rated Icom IC775. That said, despite it's fine receiver specs, terrific audio and excellent reputation, it has limitations compared to newer rigs. The DSP isn't very good, the sub receiver is rather limited when compared to the Yaesu FT1000 series and it generally shows it's age as 12 year old technology. Is it better than a TS2000? Maybe in some ways, but the TS2000 is a fine rig in it's own right.

The TS2000 gives you modern technology, more bands (160m-70cm), more features and smaller size at the expense of *some* receiver performance. Will you miss this receiver performance? Depends on what you want to do with the rig. For every day all-around usage, the TS2000 is an excellent rig, with a very good receiver. I use one for DXing every day and have never lost a contact due to QRM or desens. It does suffer a *bit* in crowded band conditions, but so does every other newer rig out there. I wouldn't buy one if you are a hardcore contester wanting to use it in a high power, multi-op, multi-station environment, though.

If you want a good rig that does alot, go with the TS2000. If you're a dyed in the wool contester, don't go with the TS950SDX, go with an FT1000MP, MP Mark V or the Mark V Field. They're all newer and are just as good as the 950SDX. Or wait for the TS970 that's rumored to be in the works for 20003 or 2004.

Good luck,
Scott, N9AI

Yea, I measured it with a Fluke DVM and it measured 52.xx ohms. The Cantenna measured 48.xx ohms.

I might, if I get time, build up the resistor mounting to be like the Cantenna.

Right now it works ok on HF. Just a slight, <<1.2 at 10 meters, SWR. So it's ok for what little I use for. The occational checking out of older rigs.

Does anybody know a source for resistors like that used in the Cantenna and Dentron? They are about 1" in diameter and 5-to-6" long.

Anybody know the exact wattage of the Cantenna resistor?

Pick up a new clean gallon can from my pal at Sherwin-Williams, some mineral oil, hmmmm.

Perhaps one could series with a light bulb and a known resistor all
connected to 120vacRMS.

1780. ICOM 706 MKII G Optional Filters

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-23 21:36:27 UTC
From: ddelakas@midway.uchicago.edu
Message-ID: <v%j%8.91$Z4.29990@news.uchicago.edu>
Source record: 41090

I had a very unpleasant experience late last night with my otherwise very dependable & robust 706. I'm curious if I am a complete idiot (this is very possible - maybe even probable) or if others have had this problem.

I wanted to install the F100 and F223 ICOM filters. After opening the top of the 706 I found myself staring at the factory-installed SSB filter with a copper-colored ribbon cable firmly taped to it. This ran from behind the SSB filter, over it, over the two empty filter slots to what appeared to be a white plastic connector on the top-most PC board. I firmly grasped this white "connector" to unplug it, pulled, and... tore what turned out to be a surface-mounted component off the board.

Man was I mad. I was so pissed off I called Icom HQ in Osaka. A very patient and pleasant woman told me that I had to call the U.S. distributor. They (ICOM in Washington State) told me that I probably didn't have a case for free repair - "Send us the rig with a letter." I think have a wonderful damned case but I can just feel that $80+ bench fee slipping out of my wallet as I write this. Naturally, the 706 is out of warranty.

The manual was absolutely no help - it basically says: Open rig. Install filters. Close rig. The picture is also less than helpful (see section 10, pg. 60.) Whatever. I lose, I guess.

Am I a trail-blazer on the frontier of stupidity or has anyone else done this or at least heard about this?

why on earth did you need to pull the ribbon cable out? I installed a FL-223 without moving a thing but the tape that the cable was taped to the stock filter with.

1782. Re: VX-7R, D.C. current with 1 watt output power (222MHz circuit info)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-23 22:22:27 UTC
From: n1kk@netzero.net
Message-ID: <d7adbb57.0207231422.60c74c91@posting.google.com>
Source record: 41093

I received some info stating the 222MHz signal uses the 2 meter
PA and Low Pass filter. This might cause some additional heat
when increasing the 222MHz power level via the Alignment Menu.
I am wondering how difficult it would be to direct the signal out
of the 2 meter PA circuit but over to the 440MHz Low Pass filter.
This would still offer some attenuation of Harmonics but would
not result in attenuation of the 222MHz signal.

I am surprised after measuring the D.C. current of an external
power supply with the radio set to 1 watt out on all bands
I didn't see a big increase in D.C. current on the 222MHz band for
the same power? I would think using the 2 meter Low Pass filter
would require a lot of power to get 1 watt out resulting in more
D.C. current required.

1783. Dummy load SWR and resistor mounting method

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-23 23:38:14 UTC
From: jeff <wd4nmq@earthlink.net>
Message-ID: <3D3DE944.5050109@earthlink.net>
Source record: 41094

In line with my previous discussion about the high SWR on 2meters vs. low SWR on a Cantenna I found out the following.

I suddenly remembered in an old ARRL Handbook there was a contruction article on an oil filled dummy load.

I went and found it in the 1987 Handbook, the last one I bought,on page 34-24. There it was, the resistor is surrounded by an aluminum tube forming a coaxial load, not just a resistor hooked up.

It even says that the shield tube should taper toward the resistor along it's length. However at HF and low VHF that is not neccessary. Their plans for a UHF super dummy does have a tapering shield.

Guess that is why the Cantenna has the tube around the resistor.

Think I will get a new gallon can lid and build a Cantenna like mounting system for the Dentron.

Well, even if you dont use 2 meters...the 746 is a better buy, and will re sell better...and in an emergency in your area, the 2 m could come in handy...they are selling "closely in price", maybe a little more for the 746 and either is a great radio...746 will also fill in as mobile (its what I use in my big pickup) so it has some advantages I think...Its also easier to use , menu system is the greatest and it has the bandscope for quick looks at a complete band or portion...73 Murray

Well, I wouldn't know. Neither would a lot of others. I don't read the magazines and neither am I the owner/manager of an amateur radio supermarket. Never had any Yaesu gear and very little Icom. Who are they ? And neither am I anywhere near a rocket scientist.

From your description I am none the wiser. But thanks for trying ! My suggestion that he should take the arithmetical average still applies.

He could of course take the geometric mean: Sqrt(920*746) = 828.4 which is in the same ballpark.

But I'm sure you understand the point I'm making. ;o) ;o)

You might check the W1TP website. Tom has some pics there and some values for keys that might help you. His URL is http://www.chss.montclair.edu/~pererat/telegrap.htm Another place is eBay completed auctions and search for the key that way, but you sometimes get some inflated prices paid there.. You also have to remember that the condition of the key is important to the value.

I have the following equipment for sale (I need to clear some space, and help pay for an IC-756Pro II):

Kenwood TS-850S/AT - I bought this new in 1994 and have used it for my main rig since then. It has INRAD 400-Hz filters in the 8.83-Mhz and 455-kHz IFs, and an INRAD 2.1-kHz filter in the 8.83-MHz IF, and comes with a Kenwood MC-50 microphone and homebrew computer interface (uses Maxim 232 IC, in nice case). The radio, mic, and computer interface are in very good condition, works fine, no scratches or dings, non-smoking environment. With original manuals and original box. $1250 plus shipping

Timewave DSP-59+ audio digital signal processor - I bought this new and it has worked with no problems since. It works very well with the TS-850. Very good condition, works fine, no scratches or dings. With original manual. $125 plus shipping

Electrovoice 641 microphone - A great mic for boatanchors. In very good condition, includes stand with PTT switch, wired with 2-pin microphone connecter (easily rewired if needed). $75 plus shipping

Kenwood R-599A receiver - Good condition, some minor wear, works fine, with photocopy manual. $140 plus shipping

Kenwood TH-215A 2-meter FM HT - Good condition, works fine, with original manual, original charger (original battery is included, but is dead), aftermarket W&W hi-capacity battery and drop-in charger. $90 plus shipping

Radio Shack HTX-202 2-meter FM HT - Very good condition. I bought this new several years ago. Works fine, no scratches or dings, includes original manual, NiCd battery, and charger. $80 plus shipping

Vibroplex Original semiautomatic key - Very good condition, works fine, no dings or scratches. I bought this new in 1988. $75 plus shipping

Realistic Pro-25 scanner - Very good condition, works fine, no dings or scratches. $50 plus shipping

Hewlett-Packard HP41CX calculator, with magnetic card reader, Advantage module, original manuals and boxes, and several additional books on the HP41. $450 plus shipping

All items will be carefully packaged. Payment by USPS money order, PayPal, or personal check (personal checks must clear before shipping).

73,
Jeff Kilgore, KC1MK

I't's not the oil it's the load resistor.
You can expect some change in SWR as you increase in frequency but it should be small. If your expoeriencing a large change then I suspect your load resistor has some inductance associated with it.

No it's not broken. I've had one since Dec 2001 and it does the same thing.
Even when I put an outside ant, it
doesn't help much. I guess it's a selling point and the end user/buyer
doesn't know that until they buy it.

1797. FS Yaesu FT-100D & ATAS-100 screwdriver antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-24 04:27:50 UTC
From: RadAct <juafi@yahoo.com>
Message-ID: <ahlg1k0rf8@enews3.newsguy.com>
Source record: 40959

Yaesu FT-100D and an ATAS-100 screwdriver antenna. The radio I've had since Dec 2001 and has
been used all of six times. The antenna I just got last Saturday. Don't know why since I haven't used the
radio that much. Both items are in brand new condition, and I mean, BRAND NEW CONDITION.

I'm asking $825 shipped if you prepay or $850 if it goes COD.

I'd like to sell as a package but, might sell seperate.

Thanks for the heads up Scott, as far as RX sensitivity, would the TS-570SG
be comparable to TS-950SDX performance? I'm trying to figure out if I
should buy
a used TS-950SDX for 1900$ or brand new TS-570SG for 1000$?

Well, that answers one of David's questions (Am I stupid?). If he is
stupid it looks like he has a lot of company. After all, something
prompted ICOM to include the extra special warning: prolly a flock of
complaints similar to his.

Fix the radio Dave ... it's worth it. :o)

Mint 3rd Generation VX-5R. Looks, and operates as brand new. It lives in it's soft case, so absolutly no degradation of the keypad numbers. Comes with the soft case, CD-15 rapid charger, programming cable, and software. $225 for all shipped CONUS. Just want something a little bigger. Hands can't punch the numbers anymore. Would entertain a trade for a clean IC-w31, w32a, Yaesu FT-530, Kenwood TH-78, TH-79. 73/Mark/W4KSR

Judging by what this person purchases and sells on ebay, I'm suspecting he
doesnt have a clue what he's really selling.
And I also suspect whoever buys it at some crazy price, will have no idea
what he's really buying.
I ebay alot, seem to do really well. But I couldnt justify trying a stunt
like this guys.

For the same reason that the one you mention won't either. He has No bidders. Plenty of idiots list a $150 radio for $250 opening bid on Ebay, it doesn't mean anyone will bid, or that the occasional "too good to be true" winning bidder will actually send the money........

1813. Re: VX-7R, D.C. current with 1 watt output power (222MHz circuit info)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-24 16:50:51 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <ahmltc$307b$1@madmax.keyway.net>
Source record: 40974

Based on your findings, it appears that the 2m signal is actually
using the 222Mhz PA and filter. Why not? If the filter begins to
cut off at 240 Mhz it will surely take out any harmonic energy
from a 2m signal. I have often noticed numerous English translation
and other errors in ham radio owner and service manuals, although
I haven't seen the VX-7r info yet.

It is common for a given RF device to lose gain as the frequency
approaches it's upper limit. So it is not uncommon to require a little
more drive and current. You should compare the dissipation
in the filter elements on 2m and 222. Typically, if your Fo is 1Mhz
above the filter cutoff F, your output power will drop like a stone to
nothing and the components will begin unsoldering themselves.

1814. Re: TS-950SDX vs. TS-2000 what is better

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-24 16:51:23 UTC
From: "Scott, N9AI" <nospam@nospam.org>
Message-ID: <fWA%8.348174$vq.19219854@bin6.nnrp.aus1.giganews.com>
Source record: 40975

The sensitivity on the TS2000 is fine, as good as the TS950SDX and the 570SG. The one place the TS2000 lacks over the TS950SDX is in blocking dynamic range, which is a specification relating to a receivers ability to reject interference from strong nearby signals.

The TS570SG is a fine rig, but not in the class of either the TS2000 or the 950SDX, although $1000 for a new one is a good deal. Your decision should be based on whether you need what the TS950SDX offers vs. what the TS2000 or TS570SG offer. The TS950SDX is generally considered a "competition class" rig, like a FT1000D or MP, which means it's designed for contesting or dxing. It has features, like a more robust RX front-end and a sub receiver, which make it more suitable for those activities than the TS2000 or the 570. This doesn't mean everyone needs a TS950SDX, or that it is necessarily "better" than the other two rigs. It's a complicated rig to use and is twice as big as either the TS2000 or the 570. It also lacks 6 meters, which both the TS2000 and 570 offer and the 950s DSP isn't as good as the 2000. The TS2000 also gives you 2 meters and 440mHz and some dual RX capability on VHF/UHF, as well as satellite functionality.

Do you need a "competition class" rig? Not everyone does and your buying decision shouldn't be based on the "prestige" that the TS950SDX might offer in some people's eyes. Are you a big time DXer or contester? If so, then you'd want to go with the 950. Do you enjoy operating VHF/UHF, as well as HF? Then you'd want to go with the TS2000. If you'd like a nice radio at a good price? Then you'd probably go with the TS570.

All three of these rigs are nice- you just have to decide which features you want and need. You can get a used TS2000 for $1400 or a new TS570SG for $1000. The difference between the cost of those two rigs and the 950 will buy an amp or antennas. You just have to decide if the TS950SDX is worth the extra money to you for how you plan to operate. I traded a TS870 for my TS2000 because the 2000 offered me the same performance on HF as the 870 and I got VHF/UHF in the deal. I don't regret that trade.

73,
Scott

Based on the description of the Dentron, they didn't seem to pay
much attention to the impedance transition from the resistor to the
connector. The Cantenna I had, did. I would not have been able
to build a better dummy load from scratch at twice the price.
Construction of the transition was similar to a Bird. If only Heath
had used an N connector...

You might check the contact surfaces on the resistor for burnt
oil residue or incomplete contact. Be very careful in cleaning, as
they may be deposited surfaces.

Nah. No attempt or threat of any sort of force at all... just a grossly overinflated sense of worth.

I think of these sorts of auctions as being more analogous to a 40-something male divorcee, with hair transplants and a shirt open to his naval and a heavy gold chain with medallion, swaggering his way into a singles bar convinced that he's $DEITY's gift to women. He _might_ get lucky, but probably not.

That's it exactly. I found in an old 1987 ARRL Handbook a "Super Dummy"
project. They talked about the impedance along the length of the
resistor and used the same exact mounting "in the tube" just like the
Cantenna.
Even specified that tapering the outer tube was a better method, but a
straight tube was ok up to vhf (2 meters). In fact the next article used
the tapered shield for a "UHF Supper Dummy".

> worldwide depending on sunspot conditions.

Kenny, don't take this to mean you can talk to your buddies all over the world with 10M. Radio propagation isn't like that. What exactly do you want to be able to do with a radio (*after* you get your license)?

You and your friends want to talk car-to-car or house-to-house?

How far apart you can talk will depend not just on which band you use, but which 'mode' (FM, SSB, AM, CW), what the terrain is like, whether there are any repeaters in the area and what sort of equipment you use (power, antenna). I can imagine some situations where 2M FM will work and 10M SSB will not (say, there's optimally-placed repeaters on 2M). I can also imagine the exact reverse.

You want to chat with anyone anywhere, the farther away the better?

Go for 10M SSB, but be aware that the places to which your signal will reach can vary from hour to hour, day to day, month to month and year to year. Better yet, go for a General license and get access to all the HF bands. For any given distance you want to talk, there's usually an optimal band, if you know which one.

You want to be able to talk to the most hams in *your* city?

Ask the hams in *your* area - find out what they use. If you don't, you'll be awefully lonely on the air. By far the most common band/mode is 2M FM, and I suspect more hams have 2M FM rigs than any other band/mode. 2M repeaters are common, too.

Bottom line - do some real research. Get your ham license, ask the local hams what they use, tell us what you hope to do. Your original question ("What is the difference between...") may not have been the right question, if you meant to ask "which should I choose?".

Hope to hear you on the airwaves!

Bob, KI8AB

A couple comments...

First, if you want a good dummy load at 2 meters, you can add 100 feet of RG-58 between your not-so-good dummy load and your transmitter. Then a 3:1 SWR will be transformed to about 1.2:1, assuming 7dB loss in the line. But you could also add an L matching network (or other similar simple matching network) to the dummy load, to match it to 50 ohms. Assuming the dummy load is 150+j0 ohms, 10.3pF shunt and 76.8nH series would match to 50 ohms at 146MHz, and yield about 1.03:1 SWR at 144 and 148 band edges. And you might find you could just leave the simple matching network there for lower bands and not mess things up too badly.

Second, 3:1 at 144MHz sounds not-so-good. That is, I'd expect a decently constructed load to do better than that. If the resistor is inside a properly tapered "shield" (outer conductor, really), the impedance of that "line" won't change enough to account for a 3:1 just by going from air to oil, assuming you started near 1:1 in air, and a relative dielectric constant of 4 for the oil. That's higher than I'd expect for transformer oil...but beware of using oil with a very high dielectric constant. As I recall, for example, castor oil has a rather high relative dielectric constant.

Cheers,
Tom

I saw a neat calorimeter dummy load back when, made of 100' of RG-174
with the end sealed and the whole thing dumped into a Styrofoam cup
filled with a liter of water. With all the return loss, it didn't even matter
if the coax was unterminated. Add a thermometer and compute the
horsepower of your transmitter;-)

Because the charging system is nominally 13.8 volts. Charging the battery requires a higher voltage than what the cells produce when at/near full charge. Usually mobile gear is designed to run from something like (at least) +- 2 volts deviation from 13.8 anyway.

My old dog won't dream before I smell it.
Many teachers wistfully fear the rich house.

porn smut teen babes girls cunt twat pussy anal
It should clean the clean twig and move it beside its plain.
Every tired full candles slowly climb as the long hens shout.
He may tease filthy shoes, do you call them? You won't laugh me
changing to your thin sign. She wants to look brave pitchers
about Sayed's house. All angry caps attempt Talal, and they
smartly fill Haji too. Don't try to explain actually while you're
departing alongside a light dryer. Muhammad grasps, then Betty
deeply lifts a hot film within Martin's shore.

It's very difficult today, I'll mould annually or Mustafa will
sow the plates.

Chris! You'll join wrinkles. Lately, I'll comb the raindrop.
He may receive grudgingly if Taysseer's floor isn't pretty. Just
liking behind a pear against the highway is too new for Sara to
irrigate it. All clever smog or hall, and she'll weekly promise everybody. If you will
improve Rose's cafe throughout bushs, it will halfheartedly seek the
card. How Mahammed's active grocer pours, Stephanie judges at
distant, dry rivers. When doesn't Rifaat taste absolutely? If you'll
cover Jbilou's road with coffees, it'll globally kick the ulcer.

Who will we nibble after Penny rejects the sweet kiosk's butcher? We
burn the kind kettle. Why did Ikram irritate beneath all the
porters? We can't open bandages unless Roger will strongly converse afterwards.

They are hating to weird, in front of proud, below ugly puddles. Try
creeping the window's rich book and Ahmad will kill you! The
code throughout the cheap hair is the teacher that arrives freely. It
behaved, you talked, yet Salahuddin never dully cooked above the
lane. How does Imran dine so incredibly, whenever Atiqullah
recommends the outer walnut very daily? Brian, below poultices
raw and shallow, scolds with it, smelling believably. They are
recollecting around the autumn now, won't dream bowls later.

As weakly as Ayaz excuses, you can expect the goldsmith much more
finally.

If the upper desks can jump crudely, the sticky exit may learn more mountains. Other abysmal urban papers will care frantically for oranges. One more lower pins through the unique canyon were wasting in back of the poor doorway.

Who did Salahuddin answer the ball against the weak ticket? I was living to order you some of my bizarre potters. The heavy pumpkin rarely wanders Abdul, it helps Ahmad instead. To be fat or pathetic will love rural dogs to regularly measure.

Gawd, it plays a game too wide in front of her stupid college. Every inner sick doses will admiringly dye the barbers. All carrots stupidly walk the strong arena. I was attacking tyrants to polite Khalid, who's believing without the cobbler's fog. Her farmer was fresh, lazy, and fears for the fire. My lost pen won't solve before I pull it. Try not to depart a sticker! Will you seek inside the bathroom, if Rifaat steadily judges the egg? Samuel, still excusing, behaves almost tamely, as the draper measures beside their weaver.

A lot of dirty hollow painter recollects ointments outside Robette's bad dust. Are you strange, I mean, changing before easy sauces? Gawd, go explain a hat! Nowadays, enigmas move before dull springs, unless they're handsome. Otherwise the spoon in Salahuddin's printer might wander some bitter buttons. Aslan creeps the onion outside hers and rigidly opens. Rahavan, have a lean envelope. You won't smell it. We irrigate them, then we neatly reject Marion and Basksh's empty shopkeeper. While trees hatefully sow frogs, the pools often kill to the deep boats. Tell Liz it's elder answering towards a gardner. The jars, cups, and diets are all worthwhile and quiet. She'd rather climb truly than converse with Karim's noisy counter.

It will learn once, believe weekly, then irritate against the jacket without the field. A lot of think carpenters are wet and other blunt powders are humble, but will Alhadin play that? Some aches will be sour sad disks. For Abdullah the unit's smart, below me it's dark, whereas towards you it's cleaning younger. Some frames pour, dine, and expect. Others inadvertently talk. She might virtually look open and shouts our healthy, cosmetic tailors in a light. I am sneakily short, so I hate you. Rifaat's tape fills in front of our pickle after we love without it. Better taste cases now or Rudy will wistfully help them under you. Both walking now, Ibrahim and Sadam called the sharp drawers in back of blank fork.

Why will you recommend the rude stale lemons before Abdul does? Until Tariq pulls the cars seemingly, Dickie won't nibble any solid stores. Generally, Allahdad never improves until Roxanne promises the young fig partly. Who moulds easily, when James jumps the cold lentil around the mirror? She should firmly laugh under closed good summers. He'll be combing under durable Founasse until his yogi burns locally.

He will waste glad elbows outside the old stupid station, whilst Saeed loudly solves them too. Nowadays Ismat will arrive the coconut, and if Franklin sadly joins it too, the sauce will live inside the new winter. Don't try to cover the jugs eerily, dream them fully. Get your unbelievably dying cloud without my monolith.

Let's like in the abysmal bedrooms, but don't cook the pathetic tags. They attempt badly, unless Donald cares cans beneath Khalid's shirt.

Hardly any filthy durable buckets will happily kick the cats.

Who will you scold the old hollow pickles before Saad does? The walnut near the urban island is the spoon that orders usably. Kenny, have a lean lemon. You won't lift it. No enigmas quickly attack the sweet ocean. Lots of glad shallow envelopes finitely fear as the solid pens tease. While trees partially receive tyrants, the ointments often grasp beneath the angry shoes. What did Jimmie dye within all the powders? We can't dream exits unless Mustafa will monthly help afterwards. Try cooking the dorm's active elbow and Steven will wander you!

The vehicle's charging system should put out 13.8 volts in order to
charge the battery. When the engine is not running, the battery
is 12.8 or less. The mobile rig needs to operate under all of
these conditions.

Most cars keep the battery "charged" with a voltage of 13.8vdc, the upper end it usually 14.1 where the car's voltage regulator shuts off the alternator, and turns it "on" about 12V.
13.8V is what is known as a "surface" charge, and the average level of voltage the battery holds between the low end, and upper end. This is usually the voltage required to cause 10-20 amps of charge current to flow. Most mobile type radios can handle a range from 11-16vdc with no ill effects.

12 Volts is the static voltage of the battery, engine not running. The
actual voltage in the system of a running auto is 13.8 which is derived from
the alternator.

Ever measured the actual open-circuit voltage of freshly-charged car battery, or the voltage coming out of the car's alternator when the engine is running? It's a good deal higher than 12 volts - 13.8 is a pretty decent approximation.

The voltage of any electrochemical battery depends on its chemistry (the metal or other material used in the electrodes, and the chemicals in the electrolyte to a lesser degree) and on the battery's charge state and temperature. A lead-acid cell, when fully charged, tends to be somewhere between 2.2 and 2.4 volts. Six cells in a battery give you around 13.8 volts.

Mobile rigs are designed to take this into account. Wouldn't surprise me if a lot of them are unable to reach full rated power if fed only 12 volts DC.

1841. What are FM, WFM, NFM, F2, F3, +-2.5kHz, +-5kHz?

Newsgroup: rec.radio.amateur.equipment

I am sure the similar question has been asked before. But I cannot find out an answer after a search.

I am looking for a commercial UHF radio to be used as a 477MHz CB. By reading the manual of my existing CB radio, it looks to me that the modulation is F3E, +=5kHz deviation. I have asked a couple of commercial radio dealers, it looks to me that their definition for WFM is +-4.5kHz deviation, and NFM is +-2.5kHz deviation. On the other hand, the information I obtained from WWW is that WFM is used for FM broadcast and TV reception and NFM for communications. Now my questions:

1) Is there a generally accepted definition for WFM and NFM? If yes, what are they?
2) What does F2, F3, F3E mean?
3) What are the effects of all these? For instance, what is the effect of transmiting in +-2.5kHz deviation and receiving in +-5kHz deviation? What is the effect of transmiting in +-5kHz deviation and receiving in +-2.5kHz deviation?
4) My scanner (Yaesu VR500) has a selection of WFM and NFM. Should I use WFM when receiving signals in +-5kHz deviation (such as UHF CB)?
5) Any WWW source for an explanation of all these?

Thanks in advance.

Sam,

The problem you are having is that the designations you are seeing are different for different services.

When it comes to communications, normally FM is 5 KHz deviation (Some instances have as much as 12.5 KHz), whereas NFM is 2.5-3 KHz. WFM is indeed usually used to denote broadband FM broadcast, whether for FM broadcast band or for FM video carriers.

When listening to the various signals on your VR-500, use NFM for all communications, and WFM for FM radio and TV audio reception.

As far as the differences in received signal, if you listen to a TX that has a 5 KHz deviation on a receiver designed for 2.5 KHz deviation, you will hear a 3dB louder audio signal, which, depending upon the design of the detector, may or may not be distorted.

When listening to a 2.5 KHz deviation signal on a receiver designed for 5 KHz, then you will hear audio about 3 dB lower than normal.

I'm not certain anymore, and perhaps someone will correct me, but I believe F2 is FSK (Frequency Shift Keying), while F3 is standard FM audio modulation.

Hope this helps, and I always welcome corrections where I am in error. :)

This is the sort of thing that happens as technology improves and changes.
A bit of history might clarify things a bit.

It was once thought that one had to have 5 times the apparent deviation of
the maximum modulating freq to do FM so broadcast was 75 kHz (5 x 15kHz)
and communication was done with 15 kHz with channels 50 kHz apart. This
was a bit wasteful as it was discovered so in the late 1950s and the
channels were split and deviation was restricted to 5 kHz. So if you
happened to ask in 1960, Wide FM was 15 and Narrow 5. The 4.5 you
encountered was to allow a subaudible squelch tone.

Well, we did it again and in the U.S at least channels are at 12.5 kHz and
max deviation is 2 kHz. So wide is 5 and narrow is 2 these days.
Australian CB is on 25 kHz channel spacing so 5 kHz deviation is in use

which I would think would be 'wide' on your scanner.

The F nomenclature is a bit obsolete but F1 was FSK (teletype) via frequency shift keying, F2 was AFSK, teletype via shifting tones on an FM carrier, F3 was voice, the E escapes me at 5 AM.

FM is a receiver dependent system so if the receiver expects 2 and has an i.f. filter for 12.5 giving it 5 kHz will simply not transmit a lot of useful information and will distort badly. Feeding 2 to a system expecting 5 just loses audio.

I hope I am making sense in the wee-bitching hours.

Hi IC-2SAT (ect.) users:

We have developed a new replacement board for the Icom UT-50 tone encoder / decoder. This new board is a physically and functionally identical to the original UT-50, just drop it in and start working those PL repeaters.

For more info see:

http://www.piexx.com/cgi-bin/piexx.cgi?p=home

Thanks,
-Chris

The manufacturer's engineers that write performance specifications
have to specify the conditions. Other wise, the specs don't mean much.

Performance specs apply only at a certain input voltage. Operate at
more or less and something might not meet the specs.

Occasionally you will see comments here about an anomaly that was
caused by trying to operate at a too low voltage.

Specifing 13.8 V as the "normal operating voltage" makes a lot of
sense in the usual PS situation. BTW, it is only "called" a 12V
battery as a convenience.

If I remember correctly, the voltage across the terminals of a freshly and fully charged (but not still on charge) "12 volt" battery is more like 12.6 volts -- which was the specified filament/heater voltage of many vacuum tubes (the common alternative being 6.3, for situations where filaments/heaters were connected in series -- although many of those 12.6v. heaters/filaments were center-tapped anyway).

Pacific Coast Parts (www.pacparts.com) shows the fan number as
F09-0405-24. This fan has been discontinued and is replaced by F09-0405-34
which they have in stock for $5.73 plus shipping. Sounds like a decent
price to me. They have plenty of other Kenwood parts as well.

Does anyone know of a meter (cheaper than a bird) that will accurately read the forward and reflected power of a 220 MHz radio <50 watts? I really like the Diamond meters but when reading the literature on the SX-40C it says that 220MHz frequencies use a 'correction factor' what is that? I was told by another ham that even the meters that cover 220MHz frequencies are not accurate that I must purchase a Bird meter. Is this true? Does anyone have any experience with swr/watt meters for these frequencies? How about the yaesu meters? I did find the MFJ makes a 220MHz meter but I have heard nothing but terrible things about MFJ and their quality!

Please help

John,

Here's a simpler explanation:

Maybe these folks buying easily modified and/or
already modified Amateur radios want to use them
for a purpose that would not be legal.

I'll bet that they are willing to pay a little more than
retail to have a discreet, non-traceable transaction?

Then they can jam the local police with imagined
impunity. These are the same folks that used to
buy all their weaponry at local gun shows. Same
reason, different merchandise.

Just something to think about.

In what way is an eBay purchase non-traceable? -- unless the purchaser registers with eBay using a phony address and a "throwaway" e-mail address (at hotmail or the like), then pays by sending cash or a money order (paid for with cash) using a private mailbox as the ship-to address?

To me, the simplest explanation is that people don't do their homework properly, or, IOW, "there's one born every minute."

The Yaesu meter does quite well. I think its the YS-60 or something like
that.

Hello NG,

we have to establish a connection betrween our head office in Hamburg and the Office in Jaffna/SriLanka in order to transmit data (text and jpg's).

Is it possible to establish such a connection (over so many miles)? And: what hardware do we need?

Greetings from Hamburg (20&#65533;C cloudy approx. 8:30 pm)

Hi,
Can someone tell me if it can be useful to :
- first, upgrade a Kenwood TS-570D to G (including a NR in steps and a more one-touch nternal DSP), see on http://www.kenwood.net/upgrades/
- second buy an external DSP for this RTX ?
My objectibve should be to discriminate more weak HF signals from the QRM and such a DSP seems to provide such improvment. But is it usefuil for such the 570D(G) that seems already well equippped ?

Thanks in advance.

Yes. You need a telephone.

Amateur radio cannot be used for any commercial purposes. Any commercial
radio system, be it HF or satellite is going to be way more expensive than
telephone.

Depending on how you supply air but you could measure the pressure drop
at the high pressure and low pressure areas. I remember that there were
requirements
for the pressure drop for the air going through the socket and chimney.

Maybe some one has those numbers.

My old 2M amplifier used two 4CX250B in the "plumbers delight"
design. Used a 100 CFM external blower to cool everything, via
flex dryer duct tubing. The flex tubing allowed me to mount the
blower well away from the operating position.

Ditto. Amateur means non-commercial.

Why not set up an international network between various computer systems with a protocol which routes messages from one user to another? It could have some sort of electronic form of mail messages where you could attach computer files like text and jpg, and we could add features like discussions groups of various topics, transfers of files, and some way of people looking at graphical displays set up by another person on some type of "site". Maybe we could call it something like the "Internet".

Seriously, if you have bandwidth, speed, reliability or security issues not addressed by the Internet, then you should look up an "intranet" or WAN (Wide Area Network) for your firm. Some of these work through the regular Internet, some through dedicated lines, some through satellites. Distance is not an issue. The South Pole station has this, and if there were (when there is) a staffed base on the Moon, it would have the same.

Go to a commercial networking company with your requirements.

Happy trails,
Gary (net.yogi.bear)

1895. Which lot of FT530 models receive full 800mhz?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-27 14:28:38 UTC
From: Mike AB7RU <mparkes@nospamatt.net>
Message-ID: <270720020731200230%mparkes@nospamatt.net>
Source record: 40906

i am looking for one of the earlier production ft530s which covered
full 800 mhz - evidently the later prduction models Yaesu cut out the
800mhz parts or something. Does anyone have info on how to determine if
its one of these earlier models? I have read that the first 2 letters
after the number indicates the lot, and anything 32 or lower was the
early models. I have found one swith serial number 3C100858 so I guess
this would a lot "10" - early model - can anyone confirm this?
thanks, Mike ab7ru

But anybody could do the same by buying from HRO or AES (probably for less), so I still don't see the advantage of eBay for "non-traceable" transactions. If I were going to send cash in the mail for something, I'd rather send it to a reputable company than to some (possibly) fly-by-night seller on eBay.

Bill:

I think the biggest reason so many are for sale is that it is such a popular rig. If 1,000 of X exist and only 10 of Y, it is likely that more Xs will be available in the secondary market than Ys.

The 'F-nomenclature' is not obsolete... it is a requirement to pass a HAM
radio license examination. so here it goes:

F1A means morse code trough an FM transceiver, by 'keying' the PTT switch
F2A means morse code by making morse-like tones and send them through the
microphone (AFSK)
F3E means voice (speak into the microphone and talk to someone).G3E is
sometimes mentioned. This means 'phase modulation', and is hardly
distinguishable from F3E (frequency modulation) by ear.

Use NFM (or FM, NBFM) for all communications except 'normal' radio stations,
television audio etc.

UHF CB will be using NBFM, NFM, FM. If your radio is using 5kHz deviation,
there will be no problem.

Bye

Alan,

That's all true, but I believe that what we are dealing
with here are clueless CB'ers who don't stop to think
about what might be available on the open market.

You and I will buy from AES, HRO, or any number
of reputable dealers.The CB'er, one of those people
who are afraid to give any information regarding
locations, those are the target audience for this type
of E-Bay type transaction.

Again, just a thought...

No it doesn't. The F is for frequency modulation but keying an FM transceiver by keying the PTT switch produces no FM signal, only on/off keying of the carrier which is A1A

Bill,

I have one, and find it an excellent radio. As one other person commented, there are a lot of them in use, so you see a lot for sale.

A few comments.

The rig is basically optimized for weak signal vhf/uhf/satellite operations. This results in some characteristics which might not be optimum for an HF operator. For robust HF reception, the optional mechanical filters are highly recommended. The stock ones are ok, but because a strong adjacent signal can pump the AGC, the desired signal can sound a bit rough. QST tactfully said something to the effect that it would be a good backup rig for a serious HF operator. It does lack a VOX, though you can buy one from an after market supplier.

Perhaps the only weakness which effects me is that it drifts a bit more than we are used to in modern rigs. It "meets specs," but I insure it has been on for a few minutes if I have time. Also, mostly on 70 cm, the TX frequency drifts a 300-400 Hz or so with extended transmissions. Not a big factor, but noticeable when you are doing satellite operations on SSB or some digital modes. Again, "meets specs."

All in all, an excellent transceiver.

Rene, see http://www.itu.int/radioclub/rr/aps01.htm

This is one of these cases where F3E is the new nomenclature for what used to be simply F3 which is probably why the memory did not work all that well at 0500 local. On the new one F2 is time-division multiplex but might be stretched to AFSK as well.

And where FM fax was F4 and FM Television was F5, they are now F3C & F respectively.

My point was and is that history has made this a confusing subject.

Hello, all!

I just finished re-capping a Hallicrafters S-38C, and after bringing it up to full voltage on a dim-bulb tester I started scanning the bands to see how it worked.

The good news is that with a 3-foot antenna I'm picking up signals from the time broadcast (10MHz), Taiwan, Russia, and all over. The bad news is that signals in the standard AM band, which should be audible w/o an antenna, aren't being picked up at all. For example, the Radio Disney antenna is 2 miles from here, and it wasn't coming in. Also, nothing in the 15-30MHz range came in, but that could be an antenna issue, coupled with the time of day (afternoon). The tests were done at full voltage.

Any ideas as to what I might do to bring in the full range of this radio?

Thanks!

THINGS THAT I DON'T LIKE ABOUT THE YEASU FT-847

1. VERY NOISY FANS, ALWAYS ON, (SOUNDS LIKE A PERSONAL COMPUTER)
2. CAN'T MEMORY SCAN BY MODE
3. ONLY 78 GENERAL MEMORIES FOR WHOLE RADIO NOT LIKE ADVERTISED (78 PER BAND)
4. NOT ABLE TO PROGRAM DIFFERENT CTCSS TONE ON XMIT AND RECEIVE
5. THE 12 SATELLITE MEMORIES NOT USABLE FOR SAME BAND REPT.
6. ONLY ONE WAY CROSSBAND REPEAT CAPABLE, IN SAT MODE ONLY
7. CTCSS DECODE CKT. OPENS ON SIGNALS WITHOUT PROPER TONE
8. REPEATER OFFSETS ADJUSTABLE, BUT IF USING DIFFERENT ONES IN THE SAME BAND THE MEMORIES DO NOT STORE THEM SEPARATELY

CC:
n2jtx@weca.org

Dear OM George:

We're a bit confused. . .

1. Perhaps your fan(s) have some mechanical problem; they are really quiet normally.

2. OK.

3. Where did we advertise 78 memories per band (can't locate such a statement myself)?

4. May I assume that the separate CTCSS tones are for a non-amateur repeater?

5. Amateur satellites do not uplink and downlink on the same band.

6. True. . .but we did not want the compromises (additional Local Oscillators with their attendant birdies, etc.) of dual receive on a high-performance weak signal DX/satellite product.

7. Can't duplicate this one. . .what tone does this happen on? Our units here work perfectly, but we're willing to listen in case we need to know

something.

8. The "Offset" is a fixed item. But you can store split memories to your heart's content. This takes less time than messing around with the re-setting of a "default" offset, to boot. Take another look at the manual, and I'm sure you'll agree.

9. It's "YAESU," not "YEASU" (!).

We hope you'll enjoy the 847 on the upcoming E season, this weekend's DUBUS EME Contest, as well as Phase 3D OSCAR.

73,

YAESU U.S.A.
C. H. Margelli

Thank you for your e-mail response.
Here is my response to your answers.

1. Fan's: Everyone who has seen my radio , comments on the fan noise.
2. MODE SCAN: We agree on.
3. 78 memories per band: In your 6 side, 3 page flier B9200227 under POPULAR MEMORY AND SCANNING FEATURES it states "The ft-847 includes 78 regular memories (comma)" plus other types of memories (comma) and ends with "and a HOME channel on each band (period) When people read this sentence, they tend to believe that this radio has all of these memory types, "on each band", because the period does not appear until
after the statement "on each band." VERY MISLEADING!!
4. Different CTCSS tones on repeaters XMIT and RCV: This is done on many amateur 6 meter repeaters to eliminate problems while linking. The Icom
706 Mark II will do this!
5. Satellite Memories: OK!
6. Crossband Repeat: You could have designed the radio to jump back and forth between the main band frequency and the sub band frequency, like
the early duel band, single freq. mobile transceivers did. (Icon 3210)
7. Radio speakers passes audio (for an instant) while in full CTCSS decode:
Not just an occasional pop when voice frequency matches the tone, but while scanning the memory channels, some being in decode. Plus the speaker clicks occasionally while listening to a single decoded memory
channel.
8. Offset: I understand, But some modern radios memories (Icom 575H) will
remember shift frequency, and not have to refer to the current shift setting.
9. YEASU YEASU YEASU: Sorry about the spelling error.
10.And one more concern: The AF or Vol pot, on the low end. Does not

activate the audio at a low enough level for my taste.

Question: Are these typical problems that all FT-847's have, or
should
I send this one in to have you look at it??

Dear OM George:

Thanks for your follow up.

1. Dunno. . .but will try to get some relative perspective on the fans.

3. Thank you. I feel better, although I do understand your point about
the sentence structure. That sentence could use a re-write, but I hope
you can see that there was no intent to mislead. I must ask, though,
how you would have the time to load even 78 memories, much less 156?

4. Hmmm. Thanks for the information. Yes, the 706 will do this. No, the
706 isn't worth much as a satellite radio.

6. Ditto on the IC-3210 as a satellite radio. Your point is noted,
though.

7. Thanks for the further information. We'll look into it.

9. Thanks, Goerge Goerge Goerge.

10. Ah. . .the "big step" at the bottom! We'll look into that, too.

Please QRX for further information. Thanks again for the helpful input.

Matt:
Unlike AA5s, the S-38 does not have a built in loop, and requires an external wire on the BCB as well as shortwave. If it is misaligned, it could easily not hear nearby MW stations with a short antenna. Sounds like alignment is the next step.

Also whenever I buy from AES, HRO, or R & L they
ALWAYS ask for my call sign. A trucker wanting to
use it like a cb won't be able to provide them with one,
but on Ebay they don't give a darn for anything EXCEPT
the money.

1924. QUESTION ON UNIDEN 2510

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-28 04:45:54 UTC
From: aokd5fxt@aol.com
Message-ID: <20020728004554.04630.00001618@mb-mk.aol.com>
Source record: 40935

I have had the rig in storage for a while (2 or 3 months). When I put it up, all was working fine. Now the display won't come up with digits. It will light up but I can't tell what frequency it is on. Is there a way to reset this display or am I just crap out of luck. Pls email me and let me know if you have had similar problems or know of how to correct the issue.

thanks

Bill

I have for sale in excellent condition an Astron RS-35M. This is the one with dual meters and looks like new with no scratches or marks. I do not have the original box, but it will be packed properly. I will take $120 plus shipping in the 48 states....I can be reached at (508) 821-2993 or email....WZ1U Steve / Lakeville, Mass.

1927. Help needed to connect Icom 706 MkII to ATAS 100

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-28 10:43:49 UTC
From: Michael Knight <m.a.knight@btinternet.com>
Message-ID: <ai0ht5$9cs$1@venus.btinternet.com>
Source record: 40938

Ddoes anyone know how to construct a control box for the ATAS 100?

I understand that it is possible to send a voltage through the coax to move the antenna up or down.

I have an Icom706 MkIIG and have been trying to find an antenna that would cover all bands from my car, and the ATAS 100 looks goodm although it is soon to be replaced by the ATAS 120.

I have for sale in very good condition an ICOM 728 HF mobile rig. The front face has some wear around the microphone jack, PBT knob and some along the top bezel. The covers are mint with no marks, scratches etc. One side of the display light is out and does not affect operation. Its in 100% operating condition and puts out 100 watts from 10 to 160 meters including the WARC bands. It does not have the AM/FM board. I have the original box, manual, dc power cable and ICOM hand microphone. I will ship it anywhere in the 48 states for $350. I can be reached at (508) 821-2993 or email.

FOR SALE:

Transmitting variable capacitors, HF, VHF etc.

E.F Johnson, Hammarlund, Cardwell, National and other brands.
All sizes, including split stator types, loading caps,
neutralizing caps, trimmers etc. etc.20 pF to 1000pF

Examples:
Large E.F. Johnson split stator varable, 300 pF + 300 pF at 3.5 KV
Type MPE 300DD35
Dimensions 9.5" deep X 4.5" X 4.25"
Has standard 1/4" shaft 1.5" long.
Will sell for $26.00

Hammarlund NOS Dual 50 pF split-stator variable capacitor
in original box.
Type MICD-50C with dimensions: 2-1/2" X 2-1/2" X 3" deep
Has standard 1/4" shaft that is 1-1/2" long
Will sell for $12.00

National Co. EMC-1000 variable capacitor 0-1000 pF QRO type,
suitable for HF linear amplifier or large RF final.
Dimensions 3-5/8" wide X 3-1/4" tall X 5" deep plus 1-1/2" long
shaft X 1/4"
This one is NEW in original box. QTY 1 available for $24.00

Hi Gang,
I need to increase the deviation/mic gain on my TH-F6A. Does anybody know where the control is? I took the cover off and found one trimpot labelled VR7A, but didn't want to mess with it. Is there a hidden menu option for doing this? I sent the radio back to Kenwood, and they replaced the mic, element and claimed they adjusted the deviation, but they didn't. Don't want to send it back again.
Tnx,
Jim W8ZR

1940. FS: 75 MHz airport marker beacon

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-28 16:58:21 UTC
From: Alex Wiecek <awiecek@hotmail.com>
Message-ID: <NoV09.218574$WJf1.2574@news01.bloor.is.net.cable.rogers.com>
Source record: 40851

Hi all, I've got two 75 MHz airport marker beacons for sale. The units are made by Philips for Transport Canada.
Both feature output powers from 0.3 to 3 watts. Each unit comes with two tranmitters (main and backup).
At the moment, both are set for outer marker modulation, but I'm sure they can be modulated with just about anything externally.
Mod depth is adjustable from 0 to 98 %.
The units are (were) working but the power sensing module has been removed and it will have to be tricked into operation - a simple task. Without the sensing unit, it will "think" that there is no power output and will try to switch to a standby transmitter.

If you wish to check out the pictures of the unit, go to the following site.

http://members.rogers.com/wiecek6010/sale/marker1.jpg
http://members.rogers.com/wiecek6010/sale/marker2.jpg
http://members.rogers.com/wiecek6010/sale/marker3.jpg

Source record: 40852

Hello all..

I've got a solid state recorder and player for sale. It has been used for
Automatic Terminal Information System at a local airport.
The unit is in perfect working condition, comes with one player unit and two
control heads. The control heads are mounted
remotely (or locally if you wish) and are used to record/check/play/transmit
on select functions.
The player unit is hooked up to a transmitter via 600 ohm line to transmit
the recorder message.
Uses? Perfect if you are running an airport and wish to install and ATIS, or
you could use this for a voice beacon on 10m or any other
band.
The unit is capable of recording a 100 second (max) message, it even has an
internally coded standby message while the new message is being
recorded. All modules are 19 inch rack mountable.
They come with manuals, cables, and whatever spares I can locate for it.

If you wish to check out the pics, go to the following site.

http://members.rogers.com/wiecek6010/sale/atis1.jpg
http://members.rogers.com/wiecek6010/sale/atis2.jpg

FOR SALE: COILS & FORMS

Two James Millen coils on ceramic forms. Dimensions
Single hole mounting, solder terminals.
QTY 2 available for $4.00 each

3 turn link with two tube plate caps attached. Ideal for the
homebrewer.
Bekellite swinging arm for coupler. Pivot goes to ceramic "BVL" Jack
bar
with 4 metal jack sockets, and pivot brackets that are wired to two
large plate caps made for tubes with 1/2" diameter plate cap.
Has enameled copper wire and some very useful hardware attached.
Link coil dimensions 2-1/2" diameter. Enamelled 18 gauge copper wire.
QTY 1 only at $5.00

22 turn air core coil. Silver plated 16 gauge wire. Terminated with
solder lugs.
Dimensions 2-1/2" long X 3/4" diameter. Inductance is 2 uH.
QTY 1 available for $2.50

30 turn air core coil. Dimensions are XX" long and XX" in diameter.
(need to measure this one)
Inductance is XX uH. QTY 1 only at $6.00

Air core coil #1 - This coil is 3" diameter and 4" long.
32 turns of 16 awg tinned or silver plated copper wire with mounting
hardware. Great tank coil for a homebrew final amplifier
or antenna tuner. QTY 1 available. Will sell for $15.00 plus shipping

Air core coil #2 - This coil is 3" diameter and 6" long.
48 turns of 16 awg tinned or silver plated copper wire.
Great tank coil for a homebrew final amplifier
or antenna tuner. QTY 1 available. Will sell for $18.00 plus shipping

35 turn coil set - extra nice, new airdux type coil with taps,
mounting plate and
pair of 2.5" ceramic standoff insulators plus all hardware.
Coil is 5" long and 2.5" diameter. 14 or 16 gauge wire.
Inductance is 31 uH. Great for homebrew projects. QTY 1 set available
for $14.00

4 MHz plug-in coil on a 4-pin base. Marked as "B" and has the range of
3.8 to 6.5 MHz
marked on it. Uses enamelled copper wire. Clean. Dimensions XX" Tall X
XX" diameter.

QTY 1 only for $6.00

4 pin plug-in coil wider spaced - looks like it is possibly for 15
meter band.
Has 9 turns of #20 gauge copper wire. Dimensions XX" Tall X XX"
diameter.
QTY 1 available for $4.00

4-pin plug-in coil #3 has form dimensions 2.25" tall X 1.5" diameter.
11 turns of 20 gauge enamelled copper wire. Inductance is 6.5 uH.
QTY 1 available for $5.00

48 turn air core coil - airdux style. Has Dimensions XX" Tall X XX"
diameter.
Inductance is XX uH. QTY 1 only available for $10.00

4-pin plug-in coil. Marked "A" and for range of 2.1 to 4.1 MHz.
Dimensions 3" Tall X 1.5" diameter. QTY 1 available for $6.00

Small 4-pin plug-in coil. Has 9 turns of 20 gauge copper wire. Looks
like
a good candidate for 15 or 20m band.
QTY 1 available for $3.00

5-pin plug-in coil with copper windings - clear plastic form. Looks
like these are
for 75 meters. QTY 2 for $6.00 each.

5 turn coil with plug and socket - looks like it would resonate on 6
meters.
Will sell for $2.00

6 turn air wound coil - airdux style. Dimensions XX" long X XX"
diameter.
One only - available for $3.00

6-pin plug-in coil form - clear plastic, new and never used.
American Phenolic Corp. of Chicago. QTY 1 only. Will sell for $5.00

6 turn coil on black plastic form with mounting screw. Suitable for
VHF driver.
Will sell for $2.00

7 MHz plug-in coil. Octal base - was designed for use with the Vintage
Radio Kit
CP5CW transmitter, but will work with any small or medium size HF rig.
QTY 1 available for $5.00

91 turn air core coil - Measures 6.5" in length and 1.5" diameter. 14
turns per inch.
65 uH inductance. Excellent with plexiglas support and four mounting
holes.
QTY 1 only for $12.00

Ceramic coil, split off-center. Has total of 20 turns with a tap at 13 turns.
On white ceramic form - former dimensions 3" long X 1.5" diameter.
Coil length is 2". Inductance is 8.56 uH. Qty 1 only for $3.00

Ceramic coil with approx 110 turns of green cotton covered wire.
White ceramic form has dimensions - 2" long X 1.5" diameter.
Inductance is around 330 uH. Suitable for AM band or LF applications.
Has screw terminals and solder lugs for connection.
New old stock. QTY 1 only for $4.00

Coil form, ribbed white ceramic. Dimensions are 5" long and 2" diameter.
Ribbed style with slots for wire. Designed to hold 26 turns and would have
about 20 uH. Has 4 mounting holes on each end. Has been repaired; looks fine,
hence low price. Qty 1 only at $1.00

Coil form - odd design ribbed ceramic former with 6 terminals on base and
three mounting screws. Dimensions are XX" tall X XX" diameter.
Qty 1 available for $3.00

Coil mounted on a neat bakelite base. Has 76 turns of enamelled wire on a ceramic form that
has dimensions 2.5" long X 1" diameter. Inductance is 74uH with 4 taps. Good condition,
with mounting hardware and solder lug terminals. QTY 1 available for $2.00

Plate choke form. This is a white ceramic coil former with dimensions 4" long X 3/4" diameter.
Has screw holes in each end for mounting and neat holes for wire attachment.
Would make excellent RFC for plate circuit in an RF final. QTY 1 only at $5.00

Plate choke - NATIONAL Radio Co. multi-layer PI-wound, non-resonant design
with green covered wire. Three hole mount for a medium sized final amplifier.
Metal base with two ceramic support pillars. Height 3.25"
QTY 1 available for $15.00

Plug-in coil with link coupling. 20m coil on 5-pin base.
Marked as model 2420. Unsure of brand. Airdux style coil has 11 turns and the link outside it has 3 turns. QTY 1 only for $5.00

Miniductor B & W 3011 in the original box. Air core coil, 3/4" diameter X 2-5/8" long
HAs 46 turns. Some taps have been attached to the coil.
Note refers to CQ Magazine Aug 1954 Page 19. QTY 1 for $3.00

Another B & W miniductor in the original box. This one is missign the part number.
Dimensions are 1-3/4" long X 1" diameter. 30 turns with a center tap.
QTY 1 available for $3.00

Multi-tapped coil. Unique design attached to a PC board with a tap for every turn.
Airdux type air core form. Coil has a total of 32 turns and dimensions of
4" long X 1.5" diameter. QTY 1 available for $6.00

One coil - wound with enamelled copper wire on a ceramic form
(need to find, measure and describe)
QTY 1 available for $2.00

Ferrite antenna. Has XX turns and Dimensions
(need to find, measure and describe)
Will sell for $2.00

National 5 Henry autotransformer choke A17847 made by National Radio Co.
Q = 10 at 100 Hz, 1mA DC. Has taps at 2%, 40%, 95%, 100% and 105%
Dimensions 2.5" tall X 1.5" square. Potted. Mounts above chassis with four nuts on studs (supplied) QTY 1 available for $2.00

Ohmite Z0 RF chokes. Red type with wire leads. QTY 5 available for $3.00 each

Ohmite Z1 RF choke. Green type with wire leads. QTY 1 available for $3.00

Ohmite Z2 RF choke. Green type with solder lugs. QTY 1 available for $4.00

Ohmite Z3 RF choke. Green type with solder lugs. QTY 1 available for $4.00

RF Choke, Flat with green covered windings. Ceramic form and base with terminals.
Approximately 2 mH. QTY 1 only at $2.00

Two RF chokes. Both have axial leads. Larger one is 2.5 mH and the smaller is 1 mH.
Will sell for $2.00 each.

Tank coil with taps. White ceramic ribbed form has holes for mounting with metal brackets.
(not supplied) Form length is 5" X 2" diameter. Winding consists of 35 turns of 16gauga silver plated or tinned copper wire, 3" in length. Taps are at 16, 23 and 30 turns.
QTY 1 available for $8.00

Variable coil form, with slug tuning inside bakelite former, measuring about 3" long and 1/2" diameter (need to measure for sure)
QTY 1 only for sale at $4.00

Variable coil #2, with slug tuning inside bakelite former, measuring
about 3" long and 1/2" diameter (need to measure for sure)
This one has winding o nit consisting of 11 turns.
QTY 1 only for sale at $4.00

Two chokes on white ceramic forms. 2" tall marked "240N58" -
Inductance 2.4mH
solder terminals - (need to find second one) - will sell for $1.50
each.

Two VHF variable coils on ceramic forms.
QTY 2 only at $1.00 each

Unusual coil - has two stepped levels. Overall dimensions2-1/4" tall X
7/8" diameter.
Upper section is 3/8" diameter with 6 turn coil, lower secion has 8
turns on
7/8" diameter section. Solder terminals. With metal mounting bracket.
QTY 1 only at $1.00

UTC Hermetic variductor, model HVC-8, new in box.
This is a small 4 Henry variable choke.
Will sell for $2.00

E-mail me for pictures or to arrange purchase.

Shipping is additional

Hardest part is getting th old bulbs out of the little rubber holders.
Place a 50 ohm 1/2 watt resistor in series with the lamps, to prevent
premature failures in the future.

Source record: 40862

Hello! Well I hate to say it, but I am going to sell my NEW ICOM R-75. I purchased this unit the last week of May, 2002. This unit has been used for LESS THAN 1 HOUR! It has never been opened nor does it have any mods done for it. It is in NEW OUT OF THE BOX condition! Here is what is included:

ICOM-R-75, Manual, Icom Power Supply, Box, Jensen Bookshelf Speaker (works as good or better than the SP-21) (matches size and color of the R-75), and an MFJ-956 Tuner/Preselector. All of this is only 2 months old and is in NEW condition used less than 1 hour!

This is the best radio I have ever had, and I hate to sell it, but I have found that I do not have the time to put into the SWL hobby that I thought that I do, and I have decided I would rather pursue other hobbies.

I am asking $600.00 INCLUDING INSURED SHIPPING. This outfit cost me in excess of $700 2 months ago. Please email me if interested!

Thank you!

LARRY- KC0HBB

1952. MFJ-1278 problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-28 21:13:13 UTC
From: Martin Arsenault <ve2bqa@arrl.net>
Message-ID: <3D445E69.CB21323C@arrl.net>
Source record: 40863

Hi,

I received a gift from a local amateur radio club. They give me a MFJ-1278
that's not in service since many years. I looked in to find the firmware version

that is 3.6.

So when i power on the TNC, leds PWR, STA and CON stay on. When I connect a
computer on the rs232 serial port i've got only garbage. I've tried many port
configuration (Speed, parity stop bits and other) so the problem is still there.

The user manual does not talk about leds CON and STA that stays ON.

I've also try to reset the TNC with removing the backup battery with no results.

Somebody can help me ??

Thanks

Martin Arsenault, VE2BQA

Try 1200 baud, 7 bits, even parity.
Might be one or two stop bits.

1954. Novel Antenna Trap

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-28 23:08:27 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <ai1thadmo5@knossos.btinternet.com>
Source record: 40865

NEW PROGRAM AVAILABLE

TWINTRAP.exe 33 kilobytes.

Two identical plastic insulated wires are close-wound alongside each for N turns on a cylindrical former. The two wires are then connected series-aiding.

Distributed capacitance between wires resonates with the trap inductance at the trap frequency.

Advantages - no high voltage, high current capacitor is needed. And trimming wire ends for exact frequency is much easier and neater than with coax traps.

Download TRAPDIP from website below.

Strange as it might seem, 1200,E,7,2 seems to be standard
on all the older TNC2 style TNCs. Glad it is working ok now!

1958. Curtis Keyer Chip

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-29 01:12:12 UTC
From: Lester Wahl <torpor-skog@inil.com>
Message-ID: <3d45e666$0$3574$1dc6e903@news.corecomm.net>
Source record: 40886

Curtis Keyer chip 8044ABM

Has anyone experienced any deterioration of
the dit/dah "memory" when operating at higher
speeds? I have several chips, and the one
that experiences the worse problem is the
oldest unit with a date code of 8611. I was
comparing it to a "newer" chip with a date
code of 9140.

I will probably buy a new chip to correct the
problem, but I was just wondering if anyone
else noticed keying problems at higher
speeds?

Was there any production problems in the
early years?

Thanks,
Duke WA9WJB

> one-touch nternal DSP), see on http://www.kenwood.net/upgrades/

Yes! But check first if you don't already have a DG. There's not a lot of
D's out there.

> - second buy an external DSP for this RTX ?
> My objectibve should be to discriminate more weak HF signals from the QRM
> and such a DSP seems to provide such improvment. But is it usefuil for
such
> the 570D(G) that seems already well equippped ?

NR1 with adjustment (DG), IF Shift, RX Eq, the built-in DSP and my ears do a
good enough job. I don't need an external DSP. But that doesn't mean that
you don't..... ;-)

Ton.

Course you could walk into any hamfest or radio shack and do a cash
transaction.

I also tend to think a lot of people just do not do their homework. I
have routinely got well above market value for items (non radio) sold
on ebay.

Hi Gang,
Picked up an ICOM IC-24AT over the weekend at a local swapmeet. Its missing the bezel that fits over and around the LCD, and one of the tiny button that are just to the left of the LCD.

Can anyone point me to a source for these parts and an operating manual? I've poked around the ICOM website and didn't see anyway obvious way to order parts. Thanks!

I have for sale in very good condition a Kenwood TR-9130 2 meter allmode. This is the 25 watt version and comes with the Kenwood MC-46 touch tone microphone, original manual and box, quick release mobile bracket. It has 2 levels of power 5 watts low and 25 high. It covers cw, ssb and fm modes. There is no tone board and the meter light bulb is burned out. I will take $200 plus shipping and can be reached at (508) 821-2993 or email.....WZ1U Steve / Lakeville, Mass.

Source record: 40882

I have for sale in very good condition an ICOM 728 HF mobile rig. The front face has some wear around the microphone jack, PBT knob and some along the top bezel. The covers are mint with no marks, scratches etc. Its in 100% operating condition and puts out 100 watts from 10 to 160 meters including the WARC bands. It does not have the AM/FM board. I have the original box, manual, dc power cable and ICOM hand microphone. I will ship it anywhere in the 48 states for $350. I can be reached at (508) 821-2993 or email.

1974. Ameritron QSK-5 Receive Attenuation Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-30 00:24:52 UTC
From: kk9t@earthlink.net
Message-ID: <3d45d6a7.6675787@news.earthlink.net>
Source record: 40884

I just lashed up an Ameritron QSK-5 to my Yaesu Mark V. After figuring out why I had lights flashing on transmit (key1 & key 2 lines swapped), everything seems to key up fine. I can key the amp (also an Ameritron), the relays hold for about three seconds and I can hear audio when the relays are keyed up but no RF Out is present. It seems to do QSK just fine and seems to work pretty much the way it should work. So, enough playing around on the dummy load. I fired it up on a live band and went to call some DX. I transmitted fine, but after I was done transmitting and the QSK TX relays were still energized though no RF out, I listened for the DX and found the receive audio was 20-30dB down. While I sat there wondering where the DX went, the QSK relays timed out after about three seconds and receive audio came back up to normal.

Anybody have any idea why this would be? My lash up consists of using the band data connector on the back of the Mark V. Pin 2, TX Gnd on the Mark V, goes to Key 2 on the QSK. Pin 8, Linear on the Mark V, goes to Key 1 and AUX on the QSK. Seems like the right lash up per the manual. But, the severe RX Audio attenuation does not sound right.

Any thoughts?

Thanks in advance

Tim

HI:

~/\/\~ { VHF } 40 WATT GM300's Brand New !!

I have found a few Brand New VHF 146 ~ 174 MHZ 16 Channel
GM300's Still in the Box ! Comes with Power Cable, Mic,
mounting hardware and Instructions

These are well known for their Excellent Performance, will do 45
Watts with ease, large enough heat sink for long tx durations,
full coverage over the entire 146-174 mhz Range.

With a R*I*C*K they can be used as a Repeater as they have
the full feature operations.

Super chance to get a Stable, High-Performance Mobile Radio
for less than wholesale cost

$335.00ea+ 10.00 S & H (Original Cost was over 750.00)

Photo @ http://www2.4dcomm.com/metrotech/gm_rad.jpg

Terms:

PayPal Now Accepted !!

Acceptable PrePayment in the form of a Postal Money Order, PayPal (If
immediate shipping is desired) or a Personal / Business check is A-OK too if
you do not mind a Short Shipping Delay due to bank processing time. This is
required only the first time or two as once you are in the data base,
PrePayment is no longer required

1981. Re: TS-930S meter lamp replacement

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-30 02:05:53 UTC
From: Rick Riverman <rbriver@attbi.com>
Message-ID: <1wm19.214821$uw.113847@rwcrnsc51.ops.asp.att.net>
Source record: 40892

Keep in mind the originals are 8.0v lamps. You can get Radio Shack
replacements that will fit but they only come in 6.3v and 12v denominations.
You can use the 12v directly and it will be dimmer than the old one but it
will last forever. If you use the 6v version, be sure to put a 100 ohm 1/2
watt resister in series to drop the 8v to the 6v rating. You might
experiment with the resistor to obtain about 5.5v across the lamp.

Hope this helps,

Rick <><

Source record: 40893

Hi all,

Well, I've almost got my code rating at 15WPM(does anyone else find that 5WPM is painfully slow, not only to copy, but even worse to send?) so it's time to get an HF rig. I have pretty much decided on one of these two all band,all mode rigs . The problem though, is that I can't tell much of a difference from the specs. So I was hoping to pick the group's mind as to the advantages/disadvantages, likes/dislikes, usability, nice special features etc. of the two radios. Some other pertinent info: I have used a 706 already and liked it, but I was limited to voice since I didn't have any code at all at the time and I didn't use any of the more advanced functions, or even some of the basic ones (like changing bands...), Also, I'm moving from Canada to Europe after the airline tickets go down after Christmas and will want to use it there as well. Oh yeah, I'll be using it as a base station.

I guess that's it, thanks for helping.

Thanks for the info. I found some nice lamps here at a local electronics store. (Norvac) Nice long insulated leads 14-24V. Grain O wheat bulbs. 70 cents apiece! The actual voltage is 28.5V. I measured it with a fluke meter. The manual must be incorrect and that is also what another feller told me. Since I don't have the manual I checked it out for myself and lo and behold 28.5V. So having said all that all is now well and the meter is lit up once more! Thanks to all who helped and if you need some bulbs let me know if you cant find em. I will be glad to help.....K7FU

1988. VR-5000 Control and Log Software

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-30 09:18:21 UTC
From: Michael <ipas.m@free.fr>
Message-ID: <3d4659dc$0$469$626a54ce@news.free.fr>
Source record: 40799

Hi everybody
For all who have a Scanner Yeasu VR-5000 you can now download "VR5000 Control And Log".
This soft allows you to control some funciotns of your VR-5000 and to log activities between a range of frequencies that you program.
So you can know which frequencies are in use when you are not at home.
To download this software :
http://ipas.m.free.fr/modules.php?name=Downloads&d_op=getit&lid=19

1989. Drake TR-3 questions

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-30 11:15:28 UTC
From: Kevin <123@abc.org>
Message-ID: <ai5sga02cl0@enews2.newsguy.com>
Source record: 40800
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I recently added a TR-3 to my boat anchor collection. I have a couple of questions. First, the S meter and the PA current meter seem to have some interaction when the unit is receiving. Is this normal? I can see no common path between them on the schematic. Second, is there a mod that would allow the rig to select the proper sideband on each band without switching to the X position? TIA and 73,

Kevin, K9HX

Try http://groups.google.com/groups?hl=en&lr=&ie=UTF-8&safe=off&q=icom+706+vs+yaesu+ft-100
&spell=1
for a load of previous posts on this. It has been debated many times.
Myself, I went with the 706g, but I wouldn't be afraid to try a
ft-100. I've never been able to actually compare them side by side, so
I can't make an accurate judgement. There are a couple of things that
swayed me to the icom. #1, it's rated at 100% duty cycle. As far as I
can determine, the ft-100 is rated 50% duty cycle. I also like the
so-239's instead of the pigtail ant connectors. As far as the ft-100d,
a plus is an included CW filter I think. And a wider receiver range in
the VHF-UHF section. But that wouldn't effect ham use. The 706g covers
30hz to 200 mhz, and then skips from 200-400 mhz, and picks back up at
400-470 mhz. You miss being able to listen to 220, or military air,
etc, etc.
As far as I know, the ft-100 covers VHF-UHF straight line up to
800-900 mhz I believe. But again, this is not really a "ham" issue,
but more a "scanner" issue..:/ I do like to listen around, and is one
reason I bought a wide range radio. As far as a strictly "ham" radio,
I came to the conclusion I like the 706mk2g best. But thats just me. I
think either one is a decent radio. I run a 706g thru a computer sound
card here at the house, and it works and sounds very good for the
small radio it is. Thru the sound card and good speakers, it sounds
like a big radio, and that gives me DSP cw filters, etc. I use it

mobile also. I want to get a laptop to run all my sound and digi stuff
when mobile/portable...Also would have gps hookup , etc ..I could run
SSTV mobile, etc.. :/ MK

1991. Re: Icom 706 vs. Yeasu FT-100

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-30 14:38:20 UTC

Message-ID: <3D46A4DC.1060700@optonline.net>
Source record: 40802

One thing I have just discovered about my new IC-706MkIIG is that, although it can be interfaced to a computer, it is not possible to set the subaudible tone frequencies remotely; I can turn the tone on and off remotely, but I can't specify its frequency (I assume that, unless set using the transceiver's own controls, that it uses the default frequency -- 88.5Hz unless changed). It's not that I want to control the rig from the computer rather than by using the rig's own controls, but I did want to be able to save and restore all the settings in case a total reset of the rig became necessary. Still, I would rate this as an annoyance rather than as a fatal flaw.

Hi !
I'm looking for PA on 23cm built on
any cheap tranzistors (russian ?).
It should give 15W with 13dBm (20mW)
driving.

Thanks
Bizon

1997. Yaesu FT-100D or FT-817 , can't decide on either of these. Ruled out Icom already.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-07-31 00:49:10 UTC
From: massimj@hotmail.com
Message-ID: <e9d3dd29.0207301649.4ec35fe6@posting.google.com>
Source record: 40808

I ordered the FT-817, but it was before I read all the input on the FT-100D. It sure would be a no brainer if the 100D had the great press that the 817 has. I read feedback on both all day long. I am wanting some feedback from the guys who know both of these radios. I know that some of you have both, or had both at one time or another, please comment.

I have missed working CW on HF, but no much else about it. I do use the UHF in the car every day, and I don't spend too much time on 2M anymore. The only thing that concerns me about the 817 is the power, 5 watts is not much, but should be fine for VHF, and UHF, It's the HF band that I feel I would like the option of more power. The minor fixes for the FT-100D, which are required right from the carton, don't bother me so much. I ordered from Ham Radio Outlet, and since they move a lot of product, I think the chances of getting old stock are slim.

I understand that there are amplifier projects going on that can boost the power of the 817, but since they are projects, they will be subject to time, and luck. Plus, they will only boost the rig to 50 or 65 watts. I doubt that the difference between that and 100 Watts would be very noticable. So the only hope of more power on HF is an amplifier that will not be easy to get.

Will I regret not getting the power of the 100D? How about that automatic antenna, the people who have it mostly say good things about it, but not all.

The other things that attract me to the 100D is the DSP, and CW filter that come stock now. The combination of these it said to be real nice for CW work. The mod on the mic would be easy, so that's no big deal.

It's a hard choice.. Not one harsh word on the 817 could be found, but there has been a few comments about the power. ALso, I know that some of the 100D problems are a direct result of the power it has, with low power comes less problems in shielding and filtering. So if the 817 had more power, it too would have more troubles than it does. Right or wrong? I hate that I ordered the 817 without getting this straight first. Joe

1998. TW-4100A questions

Hi all:
I just purchased an intermittent TW-4100A. Once I get that intermittent fixed, I would like to know how to program it.
I seem to be able to program channels 1-4 okay, but 5 - 10 don't seem to have PL on them.
Maybe there is another quirk?
Need a copy of the manual.
Best Regards...Frank, KG9H

Call HRO and tell them you are going to refuse the order, it will be returned to them un-opened. Explain your dilemma to them and I'm sure they will credit your account and work with you.. QRP operation can be a lot of fun but it is nothing like operating with 100W. It takes a lot of patience and skill. It's not a problem to come up with an amp for the 817 but now you have a conglomeration of equipment that is much larger than the FT-100, (i.e., 817, amplifier, power supply, etc., etc). Also, you will wind up with more money invested and still won't have the sophistication of the ft-100D. This could go on and on but the bottom line to me is, you have doubts now and I would not be surprised if you get very discouraged with the 5W 817 and then dump it off in the used market. (There are a lot of them for sale). Perhaps you should consider going 100W first and reducing the power if you want to sample qrp...later, if you find qrp is for you, you can pick up an 817 or one of the other qrp xcvr's. Just my $0.02 worth.

Van,

Thanks for the point out, sounds like people are getting tired of this comparison, but I think I've found what I was looking for, now all I have to do is slog throught it all and see what I can find...

Thanks again,
Ben VA6BEN

I have for sale in excellent condition a Kenwood TS-850S/AT. It comes with the original Kenwood hand microphone, manual, power cable and the original inner and outer boxes. This is from a non smoker and in 100% operating condition. I will ship it anywhere in the 48 states for $750 via UPS ground. I can be reached at (508) 821-2993 or email..WZ1U

At Dayton, Yaesu showed their 897, "an 817 on steroids." It's 50% bigger than the 817, with 100 watts up through 6, 50 watts on 2, 20 watts on 70cm.

Or 20 watts, all bands, on the internal batteries.

There's a picture of it in the August CQ.

I would consider the FT-817 as a nice optional rig if I already owned an FT-100 (which I do), but no way would I try to use it as my primary mobile rig. There's really no comparing the two, one is a real, full featured mobile rig, the other is a backpacking/camping "super HT".

news:<3D46A4DC.1060700@optonline.net>...
> One thing I have just discovered about my new IC-706MkIIG is that,
although it can be interfaced to a computer, it is not possible to set
the subaudible tone frequencies remotely; I can turn the tone on and
off remotely, but I can't specify its frequency (I assume that, unless
set using the transceiver's own controls, that it uses the default
frequency -- 88.5Hz unless changed). It's not that I want to control
the rig from the computer rather than by using the rig's own controls,
but I did want to be able to save and restore all the settings in case
a total reset of the rig became necessary. Still, I would rate this as
an annoyance rather than as a fatal flaw.
>
> -=-
> Alan, AB2OS

I hadn't noticed that , but it seems to be the case. I checked the
program "ic706 memory manager" docs, and there seems to be no way to
write tones. I guess that could be a pain if you had to rewrite a lot
of rptr pairs...You can write all the frequencies in, etc, but you
would have to go back and reset the tone on each memory channel. I
don't know how the ft-100 fares as far as puter control. MK

Yaesu parts needed.
I need a battery cover for my old FT-207R HT and a front panel part for a FT-107M HF rig. The front panel part goes above the readout and tells the position of the meter switch. If you are parting out either of these rigs and have the parts, please let me know price, etc.
73 and thanks for reading.

I am looking for a source for two Motorola M1134 or M9625
PNP RF power transistor. After over 20 years service our
repeater 100 watt continuous duty Motorola MICOR 2 meter
power amplifier (model TLD1692D) lost 2 of the 4 final
transistors. Looking for new or working used parts, or a
replacement MICOR power amplifier, or even a non-functional
amp that has two good finals that could be salvaged.

Dave Woolf - K8RSP
dwoolf@worldnet.att.net

P.S. Does anyone have a spec sheet for either of
these transistors?

I don't have a spec sheet, but if you call On Semiconductor they might have
an archive one. I suggest you take one of the good ones, measure the hFE,
find out if it's PNP or NPN, guess at the power, and pick something with
an Ft high enough for 2M. Not too many critical specs here.

Hello Ron,
Here are some links that verified as current that have 2e22 apparently
available. One site shows a qty of 200..

1. http://www.angrynine.nl/spareparts.html
2. http://www.geocities.com/nikolic_lj_dragan/Tubes/NOSElectronTubes.htm
3. http://www.alltronics.com/tubes1.htm - clearly listed 2e22 for sale
at $35 ea

I used Copernic 2001 Pro search bot for these results. There is a
totally free version of Copernic for download (adware) at
www.copernic.com FYI

Just for information: In the military scheme of equipment
numbering AN/URM-25( ) indicates a complete self-contained
unit of equipment. The URM-25( ) is made up of the SG-85
signal generator and a bunch of accessories stored in the
lid all of which have their own nomenclature. In other words,
AN/URM-25 is the designation for the whole set of goodies. If
you only have the sig gen then you have an SG-85.
Consider the famous R-390 receiver. The lack of the AN indicates
that it is a component of some system. The one I used to work on
was the AN/GRC-26D. This consisted of two R-390's, a TTY converter,
T-368 transmitter and antenna tuner plus a bunch of other things
all mounted in an equipment hut designed to be carried in the
ubiquitous 2 1/2 ton truck. Almost forgot...came with trailer
and generator set also.

73, Roger

Hello All,

I am looking for the complete harmonic filter board from a Motorola Micom-1000 solid state HF amplifier.

The amplifier appears to have been manufactured by Intec Inc. in around 1985, but I can find no information on them on the web.

Any assistance will be most appreciated.

Regards,

Marc ZS6HZ - Johannesburg, South Africa

While true you are allowed to transmit there, the modification that allows
you to do this also allows the radio to transmit there.
I believe the FCC frowns upon this.
Again, I was just pointing out a silly-ism, not gettin in your face.

If I remember correctly, even if you use 4 watts or less, The 2510 is not type accepted for 11 meters by the FCC.
As for me, I don't have a problem with it.
But...
The voobner is gonna get you!! And a new discussion will come to be :-(

Wayne,
I don't have the manual handy, but I think the F09 number is for the fan blade. I've bought quite a few of the motors, and from memory, they were in the $30 range. If Raymond still needs the P/N, e-mail me direct and I'll look it up.

Hi,

Mmm... Not sure it is enough.
If you have the opportunity to compare in the field a TS-570D(G) with
a TS-850S, take the time to listen to weak signals near noise level or
at a few Khz of a strong emitter (QRM or RFI) and try to extract it
from the background... Impossible with the 570, sometimes easy with
the 850S (but not with the 850SAT). The DSP of the 850S placed at the
IF-stage performs much better than the AF one of the 570! Of course
the price is also twice as expensive, even for a second-hand model...

I added a comment to my previous post on http://www.eham.net/reviews/
(section HF transceivers, TS-570) about the DSP.

2034. 757GXII CAT control help

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-01 07:31:54 UTC
From: Jeff Hazzard <jhazzard@bigpond.com>
Message-ID: <gm529.50088$Hj3.149910@newsfeeds.bigpond.com>
Source record: 40845

Has anyone had any success with CAT control of this tranceiver. What interface and software did you use.

2035. Re: 757GXII CAT control help

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-01 08:24:52 UTC
From: mike <spamme0@juno.com>
Message-ID: <3D48F054.4E7F0748@juno.com>
Source record: 40846

I've set up my 757GX as a remote base using an 8051 in the repeater controller
and the info published in the 757 technical supplement manual on CAT commands.
As I recall, the GXII
is the same with some added commands for programming things like the sideband
selector etc. They're very simple commands at 4800 baud. I drive TTL right
into the 757 thru an optoisolator just to be safe. If you do something to protect the
inputs, like buy the interface box or design a simple inverting buffer,
(the optoisolator with a reverse diode and resistor will do this) you can drive it right
from your computer's serial port. The only thing you have to worry about is the very
short timeout. Assemble the whole command into a string and send it with one
command from your computer. That way, it won't matter how slow or how busy
your computer is. Otherwise you'll get random command corruption with no clue
as to why.

mike

I have 2 Yaesu dual band handhelds for sale. Both in excellent condition and modified for MARS/CAPS application. Both radios come with original boxes. Shipping is included in the price.

1. Yaesu FT-50R, has PL encode and includes the optional Dry Cell battery pack. $190.00.

2. Yaesu FT-51R, has PL encode and decode, a spare battery and speaker mike. This is a true dual band radio as it can receive one band while transmitting of the other. $210,00.

Please email to wb2f@arrl.net

Well:
- licenced ham can operate on 10m band
- one can own cb radio and tx/rx on that band
- BUT one can not use one radio that does it both...
I believe they could not care less about licenced hams, rather there might be number of cb-ers that use this particular radio and than splatter all over
the band out of cb range. Technically, this particular radio probably causes less spill than $20 Radio Shack CB with cheap 50W amp that hundreds have installed, but .... I will not discuss FCC reasons. It is off the auction now,
I'll post it later in the newsgroups.

There was/is a major router outage at one of the Silicon Valley backbones.
It just came back on line, so I expect the web page should be accessable to
the greater internet soon.

2055. FS or Trade list 08-02-2002

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-02 02:44:42 UTC
From: gundoc <gundoc@insight.bb.com>
Message-ID: <umm29.751598$cQ3.116317@sccrnsc01>
Source record: 40765

Please if you have questions or want to make a trade contact me off

list at my e-mail address. gundoc@insightbb.com Some of these

lists are not swap lists and only tolerate my post because it is only

once a week. To the group owners thank you for letting me continue

to post to the group.

Dean

I will be at the Lexington, KY hamfest so If you will be there let me know
and I will bring specific Items for you.

GE Portables

GE MPA VHF Scan 136 - 150.8 split 192 channels nice 9.0

Condition. With battery and charger. I have this programmed for

Ham and up to 152 MHz before it will not lock on frequency.

$225.00

GE MPA VHF Scan 157 - 174 split. 192 channels. Nice radio 8.5

condition with battery and standard charger. I have it programmed

down to 154 MHz with no trouble but will go no lower. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.

With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These

look good and come with a battery and standard charger. $100.00 each.

GE KPC 300 VHF 16 channel scan. Nice radio with battery and

antenna. No charger with this one. $100.00

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170

but I have programmed these in the ham band with no trouble. These

have battery, antenna, and standard charger. $75.00 each

GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can

program these to the ham band. With battery, Antenna, and Charger.

$85.00 each. Have 3 of these.

GE MPS VHF 12 channel. 8.5 condition. New antennas and NOS batteries

Standard charger. $60.00 each have 2.

GE MPS UHF 48 channel. 8 = 8.5 condition, These have NOS batteries

And have 4 banks of 12 channels. These can go to the ham band. I

have been Using one of these on my ham repeater and it works great.

$60.00 each I have 4 of these. Programming on 12 channels included.

GE UHF MPS 8 channel with 8 different tones. 8 different tones can be

Selected for each different channel. Battery and antenna. $50.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1

good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I

sold this radio a year ago but have taken it on trade. Condition 8

with belt clip and charger. I had this radio run for stolen from CSX

by a local CSX Special Agent when I first bought these in a lot and

was told that it had been sold at salvage. Perfect for a RR Museum or

shortline on a budget. This could also be programmed for marine

frequencies. Like new tall Battery. $100.00

GE Mobiles

GE MVS VHF 16 channel scan. NPH20 has option cable and Mic.

Looks good $125.00

GE MVS 800 conventional 2 channel. Without mic tested OK $45.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240

450. - 470 Looks good. $125.00

GE MLS Low Band 16 channel scan. 42-50 split. New mic. Should

Program to 6 meter ham. 60 watt $150.00

GE Monogram UHF 16 channel scan. Nice radio with mic. 40 watt

Nice radio. $175.00

GE Mastr II UHF 75 watt with preamp. No Icoms drawer only.

MC65KKG88B $90.00 each only 2 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A

With 1 set of Icoms $45.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33

With 2 sets of Icoms. $10,00 each. I have many.

GE Mastr Pro 110 watt lowband 42-50 split in a wall mount cabinet

With a power supply for a base. $35.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00

each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr

II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that

I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Just in not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.

16 channel model has short cable and some handle bar mounts. Mic

included but no speaker. Not tested yet since I just got it in.

$50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit

charges your battery and turns your portable into a mobile radio.

(Convert a Com) With mic, speaker, and power cable. $90.00

GE Accessories

GE Duplexer Mod DB4075 P/N 19C307166P2. tx453.xxx rx458.xxx

With cables. 4 cavity. $175.00

GE Duplexer Mod P1 P/N 19C307166P1 tx453.xxx rx458.xxx

With cables. 4cavity. $175.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. Picked up 3 sets of UHF 2C Icoms $30.00 per set of 1tx and 1rx Icom.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE Mastr II mounting plates $15.00 each

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00

Other Radios and Accessories

Motorola Radius / Maxtrac VHF 25 watt. 16 channel scan. 16 pin accessory port. With mic. $225.00 ACD33LRA7PA5BK

Motorola Radius / Maxtrac UHF 25 watt. 2 channel 5 pin port. With shure

Mic. $175.00

Motorola Radius SM50 UHF 2 channel like new small radio. With mic and bracket. $175.00

Johnson Viking CX-HL81 800 LTR portable. With charger. $65.00 each

Uniden SPS 802TS 800 LTR portable. With charger. $65.00 each.

Yaesu FTH 2009 VHF portable. 6 channel. Works great on ham and public

Safety band. With wall charger $85.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great.

This was in my van before I added another MVS so I know it works.

$95.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by

Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition

and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of

crystals for each radio. Also have a working battery and charger for

each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work

with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know

"Motorola" They are good people and I will pass along any trades you

may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

2062. I need ONE page from IFR FM/AM-1000S manual

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-02 04:04:07 UTC
From: tomg@fullnet.com
Message-ID: <11915d6.0208012004.4d931019@posting.google.com>
Source record: 40773

I need ONE page from IFR FM/AM-1000S manual:

I need one page from the service manual for the IFR FM/AM-1000S Radio Test Set (also known as the AN/GRM-114, with manual TM 11-6625-3016-14, which is the manual that I have.):

I have a scan of the military version of the manual. But page 5-114 is missing, with a copy of page 5-113 in its place.

The missing page should contain steps 11 through 14 of the "VCO Tuner A1A11 Alignment" procedure.

I also have a page, containing Fig 5-45, the "MM-100 Assembly A2A1A1", that has only the left half of the circuit board pictured. Assuming that it should show the whole board, I need that page, or at least the right-half of the diagram.

If anyone has this material, I will happily pay for it. (Or, maybe we can work out a trade for something on my website, at http://www.fullnet.com/u/tomg/gooteesu.htm .)

If it can be scanned and converted to a jpg file and emailed to me, that would be really wonderful, as would a copy sent by mail (or even fax).

If you have it, PLEASE email me, at tomg@fullnet.com !

Thanks!

Tom Gootee

I really hate to get drawn into something like this, but it really annoys me when people can't just ignore a for sale listing that is actually a for auction listing. I don't know how many of these I see in a given week. The ones who complain about it say that it's wasting bandwidth. So what? The inane replies to the post that point out that it should be listed as FA instead of FS waste as much or more bandwidth than the original poster. At any rate, to settle the argument, I went Merriam-Webster. Guess what they had to say.

Main Entry: auc·tion
Pronunciation: 'ok-sh&n
Function: noun
Etymology: Latin auction-, auctio, from augEre to increase
Date: 1595
1 : a sale of property to the highest bidder
2 : the act or process of bidding in some card games

Note the 2nd word after the first entry. An AUCTION is a form of SALE. I know this won't change the minds of any of the 'purists' out there, but it made me feel a little better.

JWheeler

This item number is a bidet toilet seat, not a crank-up mast!

2070. RE: Question about Motorola "Trunk" mount radios..?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-02 17:54:12 UTC
From: MTM <res0i8ad@verizon.net>
Message-ID: <8Hz29.99$Wx2.45@nwrddc03.gnilink.net>
Source record: 40781

Hello.................NG.
Can anyone tell me as little bit about ...
Motorola FMTR 80V (BX) 1D..&.. FMTR 80-12D (DW) 1A.radios...
Apparently use by a Sheriffs dept...
These appear to be Trunk mounted transmitters & recievers...?
Does anyone have a use for these?...Are they legal to use (or sell)..?
Any idea of value....?
Pix available....
Thanks...

You need a cramp-up shitter as well as a crank-up mast..

Message-ID: <020820021423377328%mjq@simpsons.com>
Source record: 40784

My brother (who is not very internet savy) asked me to post this. He's looking for advice on a portable (handheld) 2 meter Ham radio. He's a Rally race car driver, and wants to carry it in his car since they're quite in use during the race, and in case of emergencies to reach the ground crew.

He didn't mention if they were using FM, SSB or what, so I'm assuming he'd want an all-band 2 meter radio.

Also, I don't think he wants to spend a lot of money, since it likely won't get used all that much. He's looking into getting his license, but was wondering if anyone would have recommendations for a good, cheap to moderate priced radio?

I told him that people on this group would probably all have opinions and some might be willing to share theirs. :)

I have my filters set not to see the damned e-bay posts in here and people that don't use FA: piss me off. Take your overpriced crap to ebay and sell it to some cbers so you can then bitch the hobby has gone to hell..

"Chas" <wg2a@frontiernet.net> wrote in message news:uklr19jrng1nc0@corp.supernews.com...

Sorry it irritates you, but this was well discussed (argued) previously. Anti-eBayers don't want to be bothered with opening these posts, the most logical thing to do (as was argued by the Pro-eBayers) was to use filters. Many people who dislike ePay do this. Unfortunately, some newbies are ignorant of this agreement, or others do it just to be @#$%^"s! As for your dictionary, it states that an auction is a form of sale, true! But here on the newsgroups, it seems we need to show which TYPE of "sale" it is. This arrangement is used simply to keep peace. As long as people understand how to properly list their posts, no one complains.

Chuck WG2A
"JWheeler" <kd5bcu@yahoo.com> wrote in message news:ukl1js2vpv3t56@corp.supernews.com...
I really hate to get drawn into something like this, but it really annoys me when people can't just ignore a for sale listing that is actually a for auction listing. I don't know how many of these I see in a given week. The ones who complain about it say that it's wasting bandwidth. So what? The inane replies to the post that point out that it should be listed as FA instead of FS waste as much or more bandwidth than the original poster. At any rate, to settle the argument, I went Merriam-Webster. Guess what they had to say.

Main Entry: auc·tion
Pronunciation: 'ok-sh&n
Function: noun
Etymology: Latin auction-, auctio, from augEre to increase
Date: 1595
1 : a sale of property to the highest bidder
2 : the act or process of bidding in some card games

Note the 2nd word after the first entry. An AUCTION is a form of SALE. I know this won't change the minds of any of the 'purists' out there, but it made me feel a little better.

I'm looking for a Yaesu FT-767GX very good or mint condition with
or with out the band modules for VHF/UHF. Need tone board also.

I'm also looking for a Icom 970a/h

I might be interested in other later (1980's - 1990's)

HF transceivers also.

I have some items I might be willing to trade toward the FT 767GX or
IC 970 which include:

HP N5195 Notebook computer.

14 " Tiff
700mhz cpu
20 gig HD
128 megs RAM installed
DVD Drive- Floppy drive
2 Batteries and power supply/charger
2 ext USB

Win ME Disks

Sony DV Digicam Model DCR- TRV-11

Yaesu VX-5R triband HT with speaker mic and DC cord and extra
battery. BOX included. No manual.

Cushcraft A4S Tri-band yagi (Less than 2 years old.

KLM 432 - 30LBX's (2 of them) 432mhz yagi's

2 - 55 element loop yagi's for 1240-1300mhz. By Directive Systems.

2 - 24 Element loop yagi's for 1240-1300mhz By Directive
Systems.

1 Mirage 430-450 all mode amp (12 volt DC) Model
D-3010 30 watts in about 110 watts out.

Bird Power sensors for Model 43 (VHF/UHF range)

Cushcraft 503 6 meter yagi

Homebrew Tower 20 foot with rotor installed in top section. 2 10 ft sections with tilt over base plate. Rotor is a Alliance HD-73 with controller.

I also have some other odds and ends .

Thanks

He will have to get a license to transmit on 2 meters. I am assuming
that this road rallying is a hobby, as amateur radio cannot be used
for any business. If it is commercial, there are other bands,
licensing and equipment needed.

He should find out in detail what the ground crews are using for
frequency and mode before buying anything. You have to know what they
are listening to before you set up to transmit. FM is the most common
mode on 2M HTs.

If it is in a car, a mobile unit might make more sense, with a solid
mounting, power and antenna hardwired, and higher power available.

All that said, if a 2M FM handheld still makes sense, the Yaesu VX-150
is a nice choice.

Rugged, puts out 5 watts, 200 memories for frequencies, CTCSS tones,
and currently has a coupon taking the price down to $129 and change at
HRO.

Go to http://www.hamradio.com/ and search on VX-150.

Each brand has its fans, but I don't think you would go far wrong with
an HT from Yaesu, Kenwood or Icom.

Happy trails,
Gary (net.yogi.bear)

Common! The 897 is a lot bigger than an 817, and the FT100. Its about 3/4 the size of my FT 757. Howeverm I was impressed with it. Recent anouncements have it scheduled to hit the stores in the US at end of August.

2088. Dual Band Mobile (Icom 2710h): Post-storage Weak Rx -- Leaky Capacitor? Help for repair.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-03 06:36:29 UTC
From: jsmith@egeland.net
Message-ID: <d742cc36.0208022236.755e7cdb@posting.google.com>
Source record: 40649

I am trying to repair an Icom 2710h VHF/UHF mobile which functions perfectly in all respects, except for one: the VHF receive is very weak (i.e. only receives very close repeaters). UHF receive is fine, and the VHF is weak, no matter which "channel" of the 2710H is used.

As far as I know, this radio worked perfectly before it was put into storage about a year or two ago. Only upon removal from storage was this problem discovered.

Based on that history, I suspect the culprit is most likely a leaky capacitor somewhere. But alas -- looking at the PCB is like trying to read microfilm without a magnifier!

So I ask anyone with a little experience: what's the best way for me to trace down the source of the problem? I haven't found any obvious physical indications of failure on any of the capacitors or other devices.

Anyone have any experience with doing these types of repairs?

Best wishes, and thanks much in advance!

Please cc me by email in your responses, if possible.

John

2089. WAS - Re: TNC For Sale

Newsgroup: rec.radio.amateur.equipment

I've said it before, I'll say it again....

Newsgroup is much like news paper. Many people buy a paper, but they all congregate to their own favorite sections to read. For example: obituaries, ads, society, sports, headlines, stocks, weather, TV listings, etc.

IF YOU DON"T LIKE READING IT, YOU SKIP IT!
HOW HARD IS THAT??????????

I see a few hundred listings a day. I don't filter any of them, but I still only read maybe a couple dozen that appeal to me.
I'd rather see a post with FA or FS that MAY attract my attention as being worth while, than to see some one whining about the posts being made in the first place!

Why not use your efforts to combat something more meaningful like making sure your elders can afford medication and to keep their home from tax sales. Beat the ears off the freaking politicians. THAT will be worth the effort. This here, is petty bull *&^%!

You waste more time and space complaining than the actual ads.....GET A LIFE! Quit acting like a self appointed NET COP or GOD.

Yes, the newsgroups ARE much like the paper, but what we are have here
is people listing obituaries deceptively (on purpose or ignorantly) in the
society section. Why are we being "Net Cops" for wanting some organization
and rules that prevent further arguments? Speaking of not opening posts you
don't like, why don't YOU follow your own advice?!

Another thing, how can you "skip it", if you don't know it's not what you want to read??? When something is posted FS when it is really FA, why am I at fault for complaining when I follow your advice and find something deceptively listed??? Should we all call the Psychic Hotline before we check these posts to make sure we don't open one that is deceptively listed??? Do you get it yet???

Source record: 40661

I'm looking for a dual band HT to replace my aging Alinco DJ-580T. A few of the features that I've identified as ones I would like to have include : "full" size handheld unit (I've tried an ICOM T-8 and decided that the "mini" size units don't seem to fit my big paw too well), alpha tags, full CTCSS features, an adequate number of channels, computer programmable, extended (RR, air & PD) receive, reasonable sensitivity and battery life.

Right now, the only unit that seems to fit (most of) these criteria is the W32. If someone has other suggestions let me know. I've read some reviews/complaints about the W32 that suggest it is insensitive, prone to overload and intermod an that it eats batteries. If any out there have some hands on practical experience with the W32, I'd welcome their advice - either pro or con. Is it really the dog some reviews on web sites suggest? Is it merely a mediocre performer with nice features? Or, is it a really nice radio getting a bad rap? If the general consensus seem to be this is something I won't want to spend my next 10 years lugging around, perhaps someone has a suggestion for a unit might fit my needs ... a "mini" unit, with alpha tags, and a full numeric keypad and is easy to use for those with big, clumsy finger?

Portable digital storage oscilloscope, in EXCELLENT condition. Operated by "AA" batteries or AC adaptor included. Can also be hooked up to your PC with included computer interface. Comes with manual, 2 probes, batteries, zippered carrying case. Probes and scope are as new, unit was very seldom used.

Brand new price was $1200, but will sacrifice for $350, plus actual shipping charges from 94612.

The specifications for this scope is very similar to the current model P-3850, at Protek's website below. Its also identical in appearance to the P-3850 which sells for $1350.

I have had a W32A for over a year now and it is in general the best HT I have ever had.

Areas of concern were/are

very poor rx in aircraft band
sever overload of rx if anything except the original rubber duck antenna is used
receiver just goes dead if you get into a hi rf area like TV Bcst transmitters VHF repeaters etc.

I live in a rural area and do not suffer but when I go to Las Vegas the rx goes dead

Original battery good for 3 hours only as Icom states.

W&W BP 173 gives me 8-10 hours

Regards

Hi Matt !!!.

What antenna do you have ???, as you don`t say anything other than you need a pre-amp, a preamp can sometimes make a bad signal even worse by adding more noise than signal !!! .

Do you have a good antenna with gain, is it vertical ?, horizontal?, is it for FM , SSB or multi-mode ????

The reason behind the questions, is to verify whether you want to improve the signal to noise ratio on a "Decent" antenna system , or try to make up for the definciencies in a "Poor" antenna and poor feeder with all the inherent faults; that you will see as a higher "S" reading of noise, particularly, if the preamp is at the bottom end of the feeder.

It may be better to imrove the gain of the antenna and use low loss feeder than to inject more noise into your Rig using a so called " low" noise pre-amp that usually does come with signal gain, but also adds it`s own built in noise and usually comes attached to a linear amp ...

If you do have a decent array then there are quite a few good designs of "masthead" kit preamps that will certainly improve an already good signal to noise ratio for a few quid , ...just shop around and don`t hesitate to ask for advice , ...that`s one thing this NG is full of, advice .... and i don`t need to mention what else it is full of , Hi ;^}} .

hi guys

i have 9 ele tonna on 2mtrs and 2 x 19 ele on 70cms but my location is the problem not much area to swing beams round with out
overhanging next doors house i have hill's house and big trees to the east and south its either move house, BIG tower , or pre
amp to try and get those signals.

cheers matt

FOR SALE:

Crystal sockets for HC-6/U crystals.
If anyone would like some, I have about 10 or 20 of these available
for $2.00 each plus shipping

These are new parts. They are teflon and anodized metal.
They have two hole side mounting, with a clip that nicely holds the
crystal in place.

Great for repairing older rigs, or for homebrewing tube transmitters &
receivers.

This is NOT the same as FT243. These are for the similar sized
crystals that have thinner pins.

E-mail me if you would like some.

I really like my W-32. Excellent tx and rx. I've had no over mod issues. I like the lighted keypad a lot. It does use batteries faster than I'd like, especially at 5 watts. I can get about 6 hours out of the rechargeable battery that it comes with. I can get more time at low wattage. I am very happy with it overall. I like the size a lot...it feels like a radio.

This is one new case of never used ferrite split beads with snap sleeves.
Made by the FAIR-RITE PRODUCTS, CORP. Part number 0443164151. Total of 126
in individual sealed plastic bags. These ferrite beads are used to suppress
RFI, EMI, and unwanted signals. They have an approx. inner diameter of 1/2",
an outer 1 1/4" square and 1 1/4" long.

Message-ID: <4pqpkucd74c17724va7q34o0if0sa4bck6@4ax.com>
Source record: 40688

I solved a dead lamp problem in my Icom by using a white LED from Radio Shack. The LED costs almost 5 bucks because it produces white light, but with the correct dropping resistor it makes for a bright meter with a "cleaner" look. Plus you won't have to worry about it failing in the future. The "rule of thumb" LED life expectancy is 11 years.

I roughed up the lens of the LED using sandpaper before installing it so it didn't cast a spot on the meter face.

Hi !! back ... Heh ,heh.

I knew your question would be the start of a thread, that`s why the questions !!!.

We still have Walt and Gareth to chip in their two pennorth of comments yet , .. but , sounds like you`ve got a round peg in a square hole . Hi .

Have a quiet word with the neighbours and promise you will behave when they`re watching Coronation street !! . ;^}} .

Don`t know where the trees are or who owns them , but , a ladder a saw and a dark night can cure a lot of poor signal strength and a lack of turning area .... LOL.

But yes !! . a good low noise preamp on even an antenna farm certainly wouldn`t do any harm even in normal circumstances , ... so save yourself a bit of cash and get a masthead kit and have a bit of fun building it 8^}} .

Nothing techical to offer , ... but hang around and you will find all the experts arriving shortly , argueing and wandering off-topic, digressing about gareths injury with a landrover and his unhealthy interest in Walts 8yr old daughters and one or two PHd`s thrown in for good measure convincing Gareth to stay with sheep etc,etc. ;^o) .

What !!! ...

73. Lee.

G6ZSG / M3ZSG .

Does anyone know which one is Q50? The caps aren't labeled on the PCB
(how the good old days were so much easier!). I plan on replacing Q50
to see if that solves the problem, so if anyone can describe which one
it is, I'd be most thankful!

J. Smith

2139. Kenwood TM-D700 rig to head pinouts - help please

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-04 16:39:48 UTC
From: Pete <news0206@toward.com>
Message-ID: <3D4D58D4.26C3379@toward.com>

Cross-posted to: alt.ham-radio.mods,alt.ham-radio.packet,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,alt.ham-radio.mods,rec.radio.amateur.digital.misc

I've just purchased a Kenwood TM-D700A from a fellow ham, but the cable between the rig and the control head has lost one of the connectors.

This rig uses a 4-pin modular connector at the head end of the cable and a 6-pin modular connector at the rig end. The cable has 4-conductors: black, red, white, and ground.

Could some kind soul please ohm-out their control head cable for this rig and email me the connections? I could use either the pin connections for the four leads at the 6-conductor end, or the end-to-end connectivity between the 4-pin and the 6-pin connectors.

Thank you very much.

73,
Pete

Hello,

I'am looking for the 50mhz module from the Yeasu FT-767GX.
The module number is FEX-767-6.
I will pay very good , for it.

Thanks for you message.

Do we also boycott the white pages, and smartpages, as well as four11.com
and others?
I find a lot of enjoyment in qrz.com. I will let my 'royalties' stay there,
and allow it to flourish. Thank you very much.
